

# Anatomy

They have excellent night vision and can see 5 times better than a human.

Their small rounded ears have a prominent white spot on the back. This creates the illusion of a tiger having "eyes" on the back of their head, which makes them look alert from behind and discourages other predators from attacking. These eyelike spots are called ocellus.

Most canines have 43 teeth, whereas tigers have only 30.

Sharp canines maul with and precise kills during hunting and their rough tongue can strip meat close of the bone and help with grooming.

Their long whiskers are very sensitive to the touch and help them navigate in the darkness when they are hunting.

A tiger's unique stripe pattern helps them to camouflage and break up their body shape, an important tool during hunting as it makes striking prey easier.

Their large paws have retractable claws and are webbed in between, which aid their love of swimming in ponds and lakes to cool off during hot periods of the day. Their agile body and strong muscles can carry them in a single leap more than 30 feet.

Tigers are the largest member of the Felidae family. They also set themselves apart with their unique coat, as stripes are rarely found in other felines. Their coat ranges from shades of orange to brown and rarely seen white. All white Bengal tigers are captives that have been bred from one male tiger that was captured in the 1960s.

The color of the white tiger's fur is the result of a genetic mutation called leucism, they are NOT an endangered species.

Tiger's distinct black stripes can also be seen when they are bald, as the stripes are found on their skin as well as their fur.

health informatics provides readers in healthcare practice and educational settings with an unparalleled depth of information on using informatics methods and tools. However, this new text speaks to nurses and, in a departure from earlier editions of this title, to all health professionals in direct patient care regardless of their specialty, extending its usefulness as a textbook. This includes physicians, therapists, pharmacists, dietitians, and many others. In recognition of the evolving digital environments in all healthcare settings and of interprofessional teams, the book is designed for a wide spectrum of healthcare professions including quality officers, health information managers, administrators, and executives, as well as health information technology professionals such as engineers and computer scientists in health care. The book is of special interest to those who bridge the technical and caring domain, particularly nurses and medical informaticians and other informaticians working in the health sciences. *Nursing Informatics: An Interprofessional and Global Perspective* contains real-life case studies and other didactic features to illustrate the theories and principles discussed, making it an ideal resource for use within health and nursing informatics curricula at both undergraduate and graduate level, as well as for workforce development. It honors the format established by the previous editions by including a content array and questions to guide the reader. Readers are invited to look out of the box through a dedicated global perspective covering health informatics applications in different regions, countries, and continents. *A Constraints-Led Approach to Golf Coaching* Ian

Renshaw, Peter Arnott, Graeme McDowall, 2020-09-13. While the popularity of golf is coming under increased pressure, it continues to hook millions of players. However, the complexity of the game and the extremely high level of precision required to hit the ball consistently well means that it is a game that is difficult to even become good at, let alone master. Consequently, irrespective of whether the player is a weekend golfer, a club member, or a tour professional, the search for the key to playing good golf feeds an insatiable desire for ideas and tips to improve golf performance and bring one's handicap down. However, traditional coaching with its primary focus on developing the perfect swing is not leading to a reduction in handicaps, and the time is ripe for a new approach. This book aims to fill this void and is a landmark text for golf coaches and players about applying a constraints-led approach (CLA) to golf coaching. In this book, two golf coaches, Pete Arnott and Graeme McDowall, talk to Ian Renshaw to demonstrate how their practice is driven and inspired by their alignment to a CLA. *A Constraints-Led Approach to Golf Coaching* includes case studies and examples of how constraints are manipulated to induce adaptation in the technical, tactical, or put in golf terms, course management, physiological, and psychological development mechanisms needed to improve at golf. Examples cover coaching from their work with beginners, high handicappers, aspirant tour players, and elite players looking to make the tour.
