**The Effect of Education System and School Characteristics on the Gender Gap in Competencies** Laura Zapfe, 2023-11-30 Laura Zapfe's aim is to explain how education system and school characteristics affect the gender gap in mathematics and reading competencies She adapts the macro meso micro model At the micro level she uses theories e.g gender specific socialization highlighting how gender specific expectations and stereotypes cause gendered interest and skills and therefore gender differences in mathematics and reading Deriving a macro meso micro link she explains how education system characteristics such as competition differentiation and standardization and school characteristics could increase or decrease the gender specific socialization effects leading to larger or smaller gender gaps in mathematics and reading competencies On this basis she performs a cross national comparison of 78 countries participating in the Programme for International Student Assessment PISA 2018 combined with further researched macro data with three level mixed effects models The results show that boys have an advantage in mathematics girls have an advantage in reading the gender effects are slightly higher for reading and the gender effects at the school level are more pronounced than those at the country level

States. Congress. Senate. Committee on Armed Services. Subcommittee on Manpower and Personnel,1983 **The Dynamics and Social Outcomes of Education Systems** J. Janmaat,M. Duru-Bellat,P. Méhaut,A. Green,2013-08-27 Some scholars argue that education systems across the western world are becoming increasingly similar due to the influence of transnational discourses and organizations Others believe that education is the panacea for all problems of social cohesion After all aren t the well educated usually more tolerant civically engaged and trusting than the poorly educated This book critically examines both claims It finds that western countries still differ markedly on key aspects of their education systems and that these differences reflect distinct political traditions and different responses to a set of competing normative and political principles The findings further suggest that raising the average education level is unlikely to be an effective strategy for promoting social cohesion Instead more promising are policies targeting the opposite ends of the lifelong learning continuum universalizing pre school education and care and promoting adult education with a pronounced second chance
