Educational Research:

Methods in Educational Research Marguerite G. Lodico, Dean T. Spaulding, Katherine H. Voegtler, 2010-05-17 *Methods in Educational Research* is designed to prepare students for the real world of educational research. It focuses on scientifically based methods, school accountability, and the professional demands of the twenty-first century, empowering researchers to take an active role in conducting research in their classrooms, districts, and the greater educational community. Like the first edition, this edition helps students, educators, and researchers develop a broad and deep understanding of research methodologies. It includes substantial new content on the impact of No Child Left Behind legislation, school reform, quantitative and qualitative methodologies, logic modeling, action research, and other areas. Special features to assist the teaching and learning processes include vignettes illustrating research tied to practice, suggested readings at the end of each chapter, and discussion questions to reinforce chapter content. Praise for the Previous Edition: A new attempt to make this subject more relevant and appealing to students. In much educational discourse, comparative education has referred solely to the study of educational similarities and differences between regions of the world or between two or more nations. This book uses the broader definition of the term to encompass a large body of research including studies focusing on comparisons between local educational systems, schools, classrooms, language groups, religious denominations, genders, social classes, and individual students. Students who are planning research projects as well as staff members of such organizations as ministries of education, school systems, bureaus of educational research, and educational aid agencies will find this volume indispensable.
