Claude Mathis, John W. Cotton, Lee Sechrest, 2013-09-17 Psychological Foundations of Education presents some of the principles of psychology that are relevant to learning and teaching It presents an alternative answer to the problem of the bifurcation of general and educational psychology in the curriculum of teacher preparation While the solution is provisional and has obvious imperfections it is offered in the hope that it may stimulate discussion of the problem and other solutions and or explicit justifications for past practice Key concepts discussed include teachers attitudes and behavior different types of learning technology in education forgetting and extinction child development and intelligence measurements Also covered are the assessment of educational achievement the social psychology of the classroom and education in urban schools This text should have a variety of uses in classes where students are preparing for teaching It was written specifically for those situations in which the prospective teacher is introduced to psychology through a one or two semester integrated sequence

Child Development and Education Teresa M. McDevitt, Jeanne Ellis Ormrod, Glenn Cupit, Margaret Chandler, Valarie Aloa, 2012-08-21 Child Development and Education is a comprehensive child development text written especially for educators It helps students to translate developmental theories into practical implications for teaching and caring for youngsters with diverse backgrounds characteristics and needs The text draws from innumerable theoretical concepts research studies conducted around the world and the authors own experiences as parents teachers psychologists and researchers to identify strategies for promoting young people s physical cognitive and social emotional growth In this Australian edition contemporary Australian and New Zealand research has been highlighted and local educational structures philosophies and controversies have been reflected **Spontaneous Cognitive Processes in Handicapped Children** Miriam Cherkas-Julkowski, Nancy Gertner, 2012-12-06 The thinking that began this book arose out of some dissatisfaction with the relatively simplified unidimensional model of development which seems to have come to dominate the fields that address the needs of atypically developing children It seemed impossible to us that developmental differences could explain the range of learning and coping styles we have seen and read about in children identified as mentally retarded slow learning learning disabled nonhandicapped and gifted If a typical model of development did not account for what children with handicaps to learning could do when they would do it and how they would accomplish it such a model was not likely to imply anything important about how to intervene with and help them Unfortunately when we first began to examine this problem turning away from a developmental model for interpreting atypical behavior meant turning toward a behaviorist one This was not very satisfying either Again the assumptions were bothersome We were expected to accept that all children this time at all ages as well as with all kinds of diagnoses learned in essentially the same way with perhaps some variation in rate

reactivity reinforcement preferences and according to more liberal applications expectancy In our search for a more satisfying view of the atypical learner we were lucky to be lost at the moment when cognitive psychology and systems theory were being found EdPsych Modules Cheryl Cisero Durwin, Marla Reese-Weber, 2024-12-12 EdPsych Modules by Cheryl Cisero Durwin and Marla Reese Weber uses an innovative modular approach integrating case studies drawn from real life classroom situations to address the challenge of effectively connecting theory and research to practice The text features succinct stand alone modules organized into themed units offering the flexibility to tailor content to the specific needs of a course Each unit opens with case studies written for early childhood elementary middle and secondary classrooms showing students the dynamics influencing the future students they plan to teach All 25 modules highlight diversity emphasizing how psychological factors adapt and change based on external influences such as sex gender race language disability status and socioeconomic background The Fifth Edition includes over seven hundred new references across all 25 modules with thorough coverage of the latest developments in education such as artificial intelligence virtual reality the latest neuroscience research and updated coverage of disabilities **Mathematics Education** Lyn D. English, Graeme S. Halford, 2012-12-06 To define better techniques of mathematics education this book combines a knowledge of cognitive science with mathematics curriculum theory and research The concept of the human reasoning process has been changed fundamentally by cognitive science in the last two decades The role of memory retrieval domain specific and domain general skills analogy and mental models is better understood now than previously The authors believe that cognitive science provides the most accurate account thus far of the actual processes that people use in mathematics and offers the best potential for genuine increases in efficiency As such they suggest that a cognitive science approach enables constructivist ideas to be analyzed and further developed in the search for greater understanding of children's mathematical learning Not simply an application of cognitive science however this book provides a new perspective on mathematics education by examining the nature of mathematical concepts and processes how and why they are taught why certain approaches appear more effective than others and how children might be assisted to become more mathematically powerful The authors use recent theories of analogy and knowledge representation combined with research on teaching practice to find ways of helping children form links and correspondences between different concepts so as to overcome problems associated with fragmented knowledge In so doing they have capitalized on new insights into the values and limitations of using concrete teaching aids which can be analyzed in terms of analogy theory In addition to addressing the role of understanding the authors have analyzed skill acquisition models in terms of their implications for the development of mathematical competence They place strong emphasis on the development of students mathematical reasoning and problem solving skills to promote flexible use of knowledge The book further demonstrates how children have a number of general problem solving skills at their disposal which they can apply independently to the solution of novel problems resulting in the enhancement of

their mathematical knowledge
