*Connecting Mountain Islands and Desert Seas*, 2005      *Physiological Ecology of North American Desert Plants* Stanley D. Smith, Russell Monson, Jay E. Anderson, 2012-12-06 This book begins with the physical and biological characterization of the four North American deserts and a description of the primary adaptations of plants to environmental stress. In the following chapters, the authors present case studies of key species representing dominant growth forms of the North American deserts and provide an up-to-date and comprehensive review of the major patterns of adaptations in desert plants. One chapter is devoted to several important exotic plants that have invaded North American deserts. The book ends with a synthesis of the adaptations and resource requirements of North American desert plants. Further, it addresses how desert plants may respond to global climate change.      **Catalog of Copyright Entries. Third Series** Library of Congress. Copyright Office, 1973

*Ecology and Management of Black-tailed and Mule Deer of North America* James R. Heffelfinger, Paul R. Krausman, 2023-04-27 Black-tailed and mule deer represent one of the largest distributions of mammals in North America and are symbols of the wide open American West. Each chapter in this book was authored by the world's leading experts on that topic. Both editors, James R. Heffelfinger and Paul R. Krausman, are widely published in the popular and scientific press and recipients of the O. C. Wallmo Award given every two years to a leading black-tailed and mule deer expert who has made significant contributions to the conservation of this species. In addition, Heffelfinger has chaired the Mule Deer Working Group sponsored by the Western Association of Fish and Wildlife Agencies for more than 15 years. This working group consists of the leading black-tailed and mule deer experts from each of 24 states, provinces, and territories in western North America, putting them at the forefront of all conservation and much of the research on this species. The book represents all current knowledge available on these deer, including how changing conditions such as fires, habitat alteration, and loss of disease, climate change, socio-economic forces, energy development, and other aspects are influencing their distribution and abundance now and into the future. It takes a completely fresh look at all chapter topics. The revisions of distribution, taxonomy, evolution, behavior, and new and exciting work being done in deer nutrition, migration, and movements, diseases, predation, and human dimensions are all assembled in this volume. This book will instantly become the foundation for the latest information and management strategies to be implemented on the ground by practitioners and to inform the public.

Although this book is about deer the topics discussed influence most terrestrial wildlife worldwide and the basic concepts in many of the chapters are applicable to other species      **The Journal of Ecology** ,1917 Vols 16 21 include supplement British empire vegetation abstracts      *Inventory and Monitoring of Wildlife Habitat* Allen Cooperrider,Raymond J.
