McCormick, Anthony Peter Farrell, Colin Brauner, 2013-01-11 The need for ion and water homeostasis is common to all life For fish ion and water homeostasis is an especially important challenge because they live in direct contact with water and because of the large variation in the salt content of natural waters varying by over 5 orders of magnitude Most fish are stenohaline and are unable to move between freshwater and seawater Remarkably some fishes are capable of life in both freshwater and seawater These euryhaline fishes constitute an estimated 3 to 5% of all fish species Euryhaline fishes represent some of the most iconic and interesting of all fish species from salmon and sturgeon that make epic migrations to intertidal mudskippers that contend with daily salinity changes With the advent of global climate change and increasing sea levels understanding the environmental physiology of euryhaline species is critical for environmental management and any mitigative measures This volume will provide the first integrative review of euryhalinity in fish There is no other book that focuses on fish that have the capacity to move between freshwater and seawater The different challenges of salt and water balance in different habitats have led to different physiological controls and regulation which heretofore has not been reviewed in a single volume Collects and synthesizes the literature

*The Future of Fisheries Science in North America* Richard J. Beamish, Brian J. Rothschild, 2009-02-07 Fisheries science in North America is changing in response to a changing climate new technologies an ecosystem approach to management and new thinking about the processes affecting stock and recruitment Authors of the 34 chapters review the science in their particular fields and use their experience to develop informed opinions about the future Everyone associated with fish fisheries and fisheries management will find material that will stimulate their thinking about the future Readers will be impressed with the potential for new discoveries but disturbed by how much needs to be done in fisheries science if we are to sustain North American fisheries in our changing climate Officials that manage or fund fisheries science will appreciate the urgency for the new information needed for the stewardship of fish populations and their ecosystems Research organizations may want to keep some extra copies for a future look back into the thoughts of a wide range of fisheries professionals Fisheries science has been full of surprises with some of the surprises having major economic impacts It is important to minimize these impacts as the demand for seafood increases and the complexities of fisheries management increase

**Sandy Beaches as Endangered Ecosystems** Sílvia Gonçalves, Susana Ferreira, 2022-02-09 Sandy beaches are the most abundant coastal environments worldwide which have an undeniable and unique ecological value Presently they are amongst the most endangered ecosystems in the biosphere mainly due to the influence of several human activities In this book renowned scientists from around the world describe key attributes of sandy beaches and highlight the problems which impact them Specific tools encompassing the physical environment and the biota are pointed out at different levels of ecological organization The book also covers suitable management conservation programmes and respective actions where ecologic economic and social dimensions are comprehensively integrated

*Exploring Methods of Faunal Analysis* Michael Glassow, Terry L. Joslin, 2012-12-31 How does the practice of archaeology benefit from faunal analysis Michael Glassow and Terry Joslin's *Exploring Methods of Faunal Analysis* Insights from California Archaeology addresses this question Contributors to this volume demonstrate how faunal remains can be used to elucidate subsistence settlement technological systems economic exchange social organization adaptation to variability in resource distribution and abundance and the impacts of historic land use The sheer prevalence of faunal remains in California archaeological sites means that most archaeologists working in the state inevitably must give these resources their close attention and yet methodological challenges remain The chapters in this thoughtfully edited volume tackle these challenges providing strategies for identifying and mitigating sample bias and recommending quantitative techniques borrowed from a variety of disciplines The volume also presents examples that illustrate the use of faunal data to test hypotheses derived from microeconomic theory the

applicability of bone and shell chemistry to faunal analysis and the relevance of faunal data to addressing issues in biology
