Quantitative methods specifically tailored for the marine biologist While there are countless texts published on quantitative methods and many texts that cover quantitative terrestrial ecology this text fills the need for the special quantitative problems confronting marine biologists and biological oceanographers The author combines common quantitative techniques with recent advances in quantitative methodology and then demonstrates how these techniques can be used to study marine organisms their behaviors and their interactions with the environment Readers learn how to better design experiments and sampling employ sophisticated mathematical techniques and accurately interpret and communicate the results Most of this text is written at an introductory level with a few topics that advance to more complex themes Among the topics covered are plot plotless sampling biometrics experimental design game theory optimization time trends modeling and environmental impact assessments Even readers new to quantitative methods will find the material accessible with plenty of features to engage their interest promote learning and put their knowledge into practice One or more examples are provided to illustrate each individual quantitative technique presented in the text The accompanying CD ROM features two multimedia programs several statistical programs help to run complex statistical programs and additional information amplifying topics covered in the text References lead readers to additional information to pursue individual topics in greater depth Quantitative Analysis of Marine Biological Communities with its extensive use of examples is ideal for undergraduate and graduate students in marine biology Marine biologists regardless of their level of experience will also discover new approaches to quantitative analysis tailored to the particular needs of their field

Design & Nature IV C. A. Brebbia, 2008 Design in engineering and science has often been inspired by nature This has been more evident in recent years after a period during which our civilization thought in terms of taming rather than working in harmony with nature The consequences of that approach are still with us and have resulted in a world increasingly homogenized lacking in biodiversity and with increased pollution Mankind has been slow to learn and even slower to apply the lessons that nature offers in spite of the urgency of our predicament This book contains papers presented at the fourth International Conference on Comparing Design in Nature with Science and Engineering The emphasis of this Volume is on engineering and architectural applications and on biomimetics reflecting in some measure current interest in finding environmentally friendly solutions which also optimize the use of natural resources The contributions have been arranged into the following topics Biomimetics Shape and Form in Engineering Nature Nature and Architectural Design Natural Materials and Surfaces Complexity and Education
