Economic Valuation Techniques for the Environment John A. Dixon, Maynard M. Hufschmidt, 1986      **The Application of Economic Techniques in Environmental Impact Assessment** David E. James, 2013-03-09 The contribution of economic thought and method to environmental management needs practical illustration Too few books on the subject achieve such an outcome This book is among the notable exceptions That economics can provide a powerful vehicle for communicating an integrated understanding of the often diverse scientific findings germane to environmental impact assessment needs to be illustrated convincingly This book does just that But it does more It speaks across cultures not to transfer know how from one culture to another but rather to activate an effective exchange of insights from one locale on the planet to another As such it is a genuine contribution to the great environmental exhortation of our times think globally act locally Too often the people best placed to make such contributions are too committed to practical outcomes and making a living doing so Just occasionally however they can be persuaded to make the special effort required to communicate globally In this book David James has once again orchestrated the contributions of virtuoso performers In doing so he has emulated the contribution he sustained throughout the International Drylands Project and preparation of the books written with John Dixon and Paul Sherman *The Economics of Dry and Management and Case Studies in Dry and Management* Earthscan London Taken together with his recent work as Special Commissioner for the path breaking national Forest and Timber Inquiry for the Australian Government we have a body of work characterised by great worthiness integrity and true global significance      **Economic Valuation Techniques for the Environment** John A. Dixon, Maynard M. Hufschmidt, 1986

Economic Analysis of the Environmental Impacts of Development Projects John A. Dixon, Richard A. Carpenter, Louise A. Fallon, Paul B. Sherman, Supachit Manipomoke, 2013-11-05 It has always been thought that some level of pollution and waste is unavoidable in development projects But no one has made much effort to quantify and assess the extent of this sort of damage In this book a group of analysts from the Asian Development Bank and from the East West Center propose a means of constructing useful economic evaluations of the impacts of development projects on the environments in which they are constructed This study demands the systematic evaluation of all the intentional and unintentional consequences of development initiatives before they are determined upon It is essential reading for development economists analysts and bankers Originally published in 1986      Environment and Development: An Economic Approach Jan Bojö, Karl-Göran Mäler, Lena Unemo, 2013-03-09 This book is the second edition of a text based on a report commissioned by the Swedish International Development Authority SIDA A The financial grant from SIDA which made the work possible is hereby gratefully acknowledged There are already many books on the market about environmental economics some of them very good What is special about this one We do not claim to have obtained new results but we have our own way of presenting the subject matter In particular we are of the opinion that policy failures are often overlooked as an obstacle to efficient environmental

management Although the main emphasis in this book is on project level analysis it is essential that such analyses be linked to an understanding of the disincentives for environmental improvements that general economic and particular environmental policies provide Another essential feature of the book although this is not unique is the links provided between theory and empirical illustrations We hope that this will illustrate to our readers the practical usefulness but also the difficulties of applying economics to environmental problems In particular we hope that the text can be of interest to decision makers development programme personnel teachers and the general public interested in how economics can contribute to better environmental decision making In principle this book can be read by anyone interested in the subject matter without any formal education in economics However some background in microeconomic theory makes the reading easier

**Bibliography of Synthesis Documents on Selected Coastal Ocean Topics** Elaine V. Collins,1994 **Core List for an Environmental Reference Collection** ,2002 *Rio Salado Environmental Restoration of Two Sites Along the Salt River: (1) Phoenix Reach and (2) Tempe Reach, Feasibility Report, Phoenix and Tempe* ,1998 **Recent Library Additions** ,1990 Handbook of Environmental Economics Karl-Goran Maler,Jeffrey R. Vincent,2005-12-09 Much applied environmental economics is concerned with the valuation of changes in environmental quality Obtaining reliable valuation estimates requires attention to theoretical and econometric issues that are often quite subtle Volume 2 of the Handbook of Environmental Economics presents both the theory and the practice of environmental valuation It synthesizes the vast literature that has accumulated since the publication of the Handbook of Natural Resource and Energy Economics two decades ago It includes chapters on individual valuation methods written by researchers responsible for fundamental advances in those methods It also includes cross cutting chapters that deal with aspects of welfare theory uncertainty experimental methods and public health that are pertinent to valuation Throughout the volume attention is paid to research and policy issues that arise not only in high income countries where most of the theory and econometrics that underlie applied valuation methods have been developed but also in poorer parts of the world The volume provides a state of the art reference for scholars and practitioners alike *Sustainable Forestry Challenges for Developing Countries* Matti Palo,G. Mery,2012-12-06 This book is an outcome of a research project on Sustainable Forestry and the Environment in Developing Countries The project has been run by Metsantutki muslaitos METLA the Finnish Forest Research Institute since 1987 and will be completed this year A major output by this project has so far been a report in three volumes on Deforestation or development in the Third World The purpose of our multidisciplinary research project is to generate new knowledge about the causes of deforestation its scenarios and consequences More knowledge is needed for more effective efficient and equitable public policy both at the national and international levels in supporting sustainable forestry in developing countries Our project has specifically focused on 90 tropical countries as one group and on three subgroups by continents as well as the three case study countries the Philippines Ethiopia and Chile The University of Joensuu has been our active partner in the

Philippine study We have complemented the three cases by the analyzes of Brazil and Indonesia the two largest tropical forest owning countries Some other interesting country studies were annexed to complement our book both by geography and expertise The United Nations University World Institute for Development Economics Research UNU-IWIDER in Helsinki Finland has also been partly engaged Most of the results from its project on The Forest in the South and North in Context of Global Warming will however be published later in a separate book Environmental Impact Assessment Alan Gilpin,1995 This book examines the crucial role of EIA in government decision making in Europe the Nordic countries North America Asia and the Pacific *Economic Analysis of Environmental Impacts* John A. Dixon,1994 First Published in 1994 Routledge is an imprint of Taylor Francis an informa company **Handbook of Environmental Economics** Karl-Göran Mäler,Jeffrey R. Vincent,2003 The Handbook of Environmental Economics focuses on the economics of environmental externalities and environmental public goods Volume I examines environmental degradation and policy responses from a microeconomic institutional standpoint Its perspective is dynamic including a consideration of the dynamics of natural systems and global with attention paid to issues in both rich and poor nations In addition to chapters on well established topics such as the theory and practice of pollution regulation it includes chapters on new areas of environmental economics research related to common property management regimes population and poverty mechanism design political economy of regulation experimental evaluations of policy instruments and technological change *Integrated Watershed Management* H. M. Gregersen,Peter F. Ffolliott,Kenneth N. Brooks,2007 As human populations expand and demands upon natural resources increase the need to manage the environments in which people live becomes more important but also more difficult Land and water management is especially critical as the use of upstream watersheds can drastically affect large numbers of people living in downstream watersheds An integrated approach that stresses both the importance of participatory planning and the institutional and technical constraints and opportunities is therefore necessary The institutional and technical context for managing watersheds and river basins including the involvement of both the public and private sectors is also examined *The Environment and Emerging Development Issues* Partha Dasgupta,Karl-Göran Mäler,2000 Two and a half billion people are affected directly on a day to day basis by the allocation and use of purely local resources Yet official development economics has concentrated on headline international issues and only recently begun to take account of the dependence of poor countries on their natural resources the link between acute poverty and environmental degradation and the problems associated with the management of local common property such as soil and soil cover water forests and their products animals and fisheries In this volume part of the WIDER Program on the Economics of the Environment expert contributors provide a set of authoritative studies of emerging development issues ranging from foundational matters to case studies original research in areas where there has been a paucity of work to survey papers They address both analytic and empirical issues on the role of environmental resources in the development process presenting explanations of existing situations and

policies for the future A wealth of interests and backgrounds is represented and reflected in the cross fertilization between papers

*Economics of Dryland Management* John A. Dixon,David E. James,Paul B. Sherman,2013-11-05 We have always had land in which the agricultural productivity is limited because there is not enough moisture Systems of farming and burning often degrade dryland further until it is desert Today however the problem is becoming much more serious Over 20 per cent of the world s population lives in dryland areas and unless action is taken drylands will increase dramatically This book focuses on the people who live and farm in the drylands their use of land resources and the economic returns from their decisions In a clear and thorough economic appraisal the authors show how it is still possible to arrest the problem Originally published in 1989

*Economics and Ecosystems* Lars Hein,2010-01-01 A central issue in economics is the optimal allocation of scarce resources Is efficient allocation indeed optimal and does it lead to sustainable solutions Lars Hein contributes to this discussion at the interface of ecology and economics and provides interesting case studies to test various theoretical approaches The book is a must for both economists with an interest in ecology and for ecologists with an interest in economics Ekko van Ierland Wageningen University the Netherlands Economics and Ecosystems demonstrates how the concepts of economic efficiency sustainability and equity can be applied in ecosystem management The book presents an overview of these three concepts a framework for their analysis and modelling and three case studies Specific attention is given to how complex ecosystem dynamics such as thresholds or irreversible responses influence ecosystem management options The case studies focus on ecosystem dynamics and ecosystem services supply in a forest ecosystem a Dutch wetland and a rangeland in the Western Sahel Integrating ecology and economics this informative book will appeal to postgraduate students in environmental sciences and environmental economics as well as ecosystem managers

Valuing Forests H. M. Gregersen,Food and Agriculture Organization of the United Nations,1995-01-01 In recent years issues related to forests have come to prominence on the international agenda This reflects growing concern over the fate of forest ecosystems and possible loss of the benefits which they provide In the process of moving towards sustainable management of forests there is growing demand for practical methodologies for full valuation of forests which permit the contributions of forests to be presented more clearly and in a manner which decision makers can readily appreciate Appropriate techniques should be able to adequately capture forest values in terms of the environmental social and production functions and to recognise the worth of both marketed and non marketed goods and services This publication reviews approaches which can overcome the limitations of conventional analysis and provides a reference framework to help clarify what approaches to forest valuation can or cannot work The publication is not itself a manual on valuation techniques but by reviewing the various approaches makes it possible to select appropriate methodologies for which it then refers readers to other publications which can provide how to do details

**Economic Analysis of Environmental Impacts** John Dixon,Louise Scura,Richard Carpenter,Paul Sherman,2013-11-05 This revised and updated guide to the environmental economics of development

projects demonstrates how the environmental impacts of projects can be translated into monetary values The theoretical bases are examined and the techniques themselves given detailed exposition supported by extensive case studies illustrating a wide range of applications The text should become a useful complement to all standard forms of project analysis
