Mosaic Landscapes and Ecological Processes L. Hansson, L. Fahrig, G. Merriam, 2012-12-06 This series presents studies that have used the paradigm of landscape ecology Other approaches both to landscape and landscape ecology are common but in the last decade landscape ecology has become distinct from its predecessors and its contemporaries Landscape ecology addresses the relationships among spatial patterns temporal patterns and ecological processes The effect of spatial configurations on ecological processes is fundamental When human activity is an important variable affecting those relationships landscape ecology includes it Spatial and temporal scales are as large as needed for comprehension of system processes and the mosaic included may be very heterogeneous Intellectual utility and applicability of results are valued equally The International Association for Landscape Ecology sponsors this series of studies in order to introduce and disseminate some of the new knowledge that is being produced by this exciting new environmental science Gray Merriam Ottawa Canada Foreword This is a book about real nature or as close to real as we know a nature of heterogeneous landscapes wild and humanized fine

grained and coarse grained wet and dry hilly and flat temperate and not so temperate Real nature is never uniform At whatever spatial scale we examine nature we encounter patchiness If we were to look down from high above at a landscape of millions of hectares using a zoom lens to move in and out from broad overview to detailed inspection of a square meter we would see that patterns visible at different scales overlay one another

Beyond the War on Invasive Species Tao Orion, 2015-06-17 Invasive species are everywhere from forests and prairies to mountaintops and river mouths Their rampant nature and sheer numbers appear to overtake fragile native species and forever change the ecosystems that they depend on Concerns that invasive species represent significant threats to global biodiversity and ecological integrity permeate conversations from schoolrooms to board rooms and concerned citizens grapple with how to rapidly and efficiently manage their populations These worries have culminated in an ongoing war on invasive species where the arsenal is stocked with bulldozers chainsaws and herbicides put to the task of their immediate eradication In Hawaii mangrove trees *Avicennia* spp are sprayed with glyphosate and left to decompose on the sandy shorelines where they grow and in Washington helicopters apply the herbicide Imazapyr to smooth cordgrass *Spartina alterniflora* growing in estuaries The war on invasive species is in full swing but given the scope of such potentially dangerous and ecologically degrading eradication practices it is necessary to question the very nature of the battle Beyond the War on Invasive Species offers a much needed alternative perspective on invasive species and the best practices for their management based on a holistic permaculture inspired framework Utilizing the latest research and thinking on the changing nature of ecological systems Beyond the War on Invasive Species closely examines the factors that are largely missing from the common conceptions of invasive species including how the colliding effects of climate change habitat destruction and changes in land use and management contribute to their proliferation There is more to the story of invasive species than is commonly conceived and Beyond the War on Invasive Species offers ways of understanding their presence and ecosystem effects in order to make more ecologically responsible choices in land restoration and biodiversity conservation that address the root of the invasion phenomenon The choices we make on a daily basis the ways we procure food shelter water medicine and transportation are the major drivers of contemporary changes in ecosystem structure and function therefore deep and long lasting ecological restoration outcomes will come not just from eliminating invasive species but through conscientious redesign of these

production systems Beyond the War on Invasive Species is a devastating exposé of the military industrial invasive species complex and a sorely needed and impeccably researched volume that should become one of many as we recover from self destructive attempts to eradicate parts of nature instead of acting with an understanding of the whole Ben Falk author of The Resilient Farm and Homestead and founder of Whole Systems Design **Flight of the Monarch** Barrett

H.

Dennis, 2012-04-10 Winner of the Marsh Book of the Year Award 2012 by the British Ecological Society In A Resource Based Habitat View for Conservation Roger Dennis introduces a novel approach to the understanding of habitats based on resources and conditions required by organisms and their access to them a quantum shift from simplistic and ineffectual notions of habitats as vegetation units or biotopes In drawing attention to what organisms actually use and need in landscapes it focuses on resource composition structure and connectedness all of which describe habitat quality and underpin landscape heterogeneity This contrasts with the current bipolar view of landscapes made up of habitat patches and empty matrix but illustrates how such a metapopulation approach of isolated patchworks can grow by adopting the new habitat viewpoint

The book explores principles underlying this new definition of habitat and the impact of habitat components on populations species distributions geographical ranges and range changes with a view to conserving resources in landscapes for whole communities It does this using the example of butterflies the most alluring of insects flagship organisms and key indicators of environmental health in the British Isles where they have been studied most intensively The book forms essential reading for students researchers and practitioners in ecology and conservation particularly those concerned with managing sites and landscapes for wildlife
