Educating Eve:

The 'Language Instinct' Debate Geoffrey Sampson, 2005-04-01 When it was first published in 1997 Geoffrey Sampson's *Educating Eve* was described as the definitive response to Steven Pinker's *The Language Instinct* and Noam Chomsky's nativism. In this revised and expanded new edition Sampson revisits his original arguments in the light of fresh evidence that has emerged since the original publication. Since Chomsky revolutionized the study of language in the 1960s it has increasingly come to be accepted that language and other knowledge structures are hard wired in our genes. According to this view human beings are born with a rich structure of cognition already in place. But people do not realize how thin the evidence for that idea is. *The Language Instinct Debate* examines the various arguments for instinctive knowledge and finds that each one rests on false premisses or embodies logical fallacies. The structures of language are shown to be purely cultural creations. With a new chapter entitled *How People Really Speak* which uses corpus data to analyse how language is used in spontaneous English conversation responses to critics, extensive revisions throughout and a new preface by Paul Postal of New York University, this new edition will be an essential purchase for students, academics and general readers interested in the debate about the language instinct.

Educating Eve Geoffrey Sampson, 1997 A different picture of learning is suggested by Karl Popper's account of knowledge growing through conjectures and refutations. The facts of human language are best explained by taking language acquisition to be a case of Popperian learning. *The Intelligent Man's Guide to Marriage and Celibacy* Juanita Tanner (pseud.), 1929

Educating Eve, by Evelyn M. Brown Evelyn M. Brown, *The Galaxy Is Rated G* R.C. Neighbors, Sandy Rankin, 2011-08-31 Through spaceships, aliens, ray guns and other familiar trappings, science fiction uses the future and sometimes the past to comment on current social, cultural and political ideologies. The same is true of science fiction in children's film and television. This collection of essays analyzes the confluences of science fiction and children's visual media, covering such cultural icons as Flash Gordon, the Jetsons and Star Wars, as well as more contemporary fare like the films *Wall-E*, *Monsters vs Aliens* and *Toy Story*. Collectively, the essays discover, applaud and critique the hidden and not so hidden messages presented on our children's film and TV screens.

Delivering Motherhood Katherine Arnup, Andrée Lévesque, Ruth Roach Pierson, 2024-09-30 In the course of the nineteenth and twentieth centuries, motherhood in Canada, as elsewhere in the western world, became contested terrain. Male medical practitioners vied with midwives and midwives with nurses, while reform-minded middle-class women joined with the eugenically minded state officials in efforts to control the quantity and quality of the population. As reproduction gained in importance as a political as well as a religious issue, motherhood became the centre of debate over public health and welfare policies and formed the cornerstone of feminist and anti-feminist as well as nationalist and pacifist ideologies. Originally published in 1990, *Delivering Motherhood* now with a new preface by Katherine Arnup is the first comprehensive study on the history of this complex development in Canada, where control over the different stages of reproduction, from conception to

delivery to childcare shifted from the central figure of the mother to experts and professionals The contributions range from the treatment of single mothers in Montreal in the Depression to La Leche League in the 1960s 70s and 80s This book will be an essential read for students and researchers of women s studies feminist studies women s history and sociology

Linguistics Today □ Facing a Greater Challenge Piet van Sterkenburg, 2004-10-13 Every five years the Permanent International Committee of Linguists CIPL organises a world congress for linguists And every five years the Committee faces the challenge of presenting a programme at the highest possible level The CIPL Executive Committee decided for the Congress planned for 2003 in Prague to focus on four major topics which play an important role in today s linguistic debate 1 Typology 2 Endangered Languages 3 Methodology and Linguistics including fieldwork and 4 Language and the mind Leading experts have introduced the four themes in their plenary lectures in the course of the congress which served as a basis for the articles presented in the current volume This book should be a welcome tool for all linguists wishing to find their way quickly in current developments A CD Rom containing the full proceedings of the Prague Congress is included **Genre**

and Institutions Frances Christie, J. R. Martin, 2005-03-01 This book examines genres as instances of social processes enacting a range of important institutional practices hence also shaping people s subjectivities Genres represent purposive and staged ways of building means in a culture The book s particular claim to originality is that using systemic functional grammar it demonstrates how given genres build or enact social practice how educational setting provide contexts in which some apprenticeship into such genres occurs and how theorizing about such matters helps build a theory of social action revealing how powerful is the systemic functional analysis in addressing questions concerning the social construction of reality The discussion is built around extensive analysis of instances of texts collected in a number of worksites and school settings While most are instances of written genres some are spoken most notably the chapter that is devoted to the discussion of the spoken classroom texts in which the teaching and learning of the written genres take place Treebanks

A. Abeillé, 2012-12-06 Linguists and engineers in Natural Language Processing tend to use electronic corpora more and more Most research has long been limited to raw unannotated texts or to tagged texts annotated with parts of speech only but these approaches suffer from a word by word perspective A new line of research involves corpora with richer annotations such as clauses and major constituents grammatical functions and dependency links The first parsed corpora were the English Lancaster treebank and Penn Treebank New ones have recently been developed for other languages This book provides a state of the art on work being done with parsed corpora gathers 21 papers on building and using parsed corpora raising many relevant questions deals with a variety of languages and a variety of corpora is for those working in linguistics computational linguistics natural language syntax and grammar Contraception across Cultures Andrew Russell, Mary

Thompson, Elisa J. Sobo, 2020-06-04 Contraception is an issue of considerable concern to a great many heterosexually active people Yet the impact of contraceptive technologies in the world today in particular their implications for kinship gender

relations and other aspects of social life receives relatively little scholarly attention This book brings a new perspective to the study of contraception by collecting together in one volume leading experts in the fields of contraception family planning and reproductive health Contributors look at the social economic political and cultural contexts in which contraceptive providers and recipients make decisions about whether and what forms of contraception to use User perspectives whether those of recipients or providers of contraceptive services are taken seriously as are the perspectives of policy makers and development experts With its in depth case study approach this challenging book will appeal to practitioners and planners in the fields of family planning and reproductive health as well as to students and academics of applied and medical anthropology health studies gender and development studies or anyone interested in the social cultural and ethical issues raised by contraceptive technologies

Gendering the Settler State Kate Law, 2015-11-06 White women cut an ambivalent figure in the transnational history of the British Empire They tend to be remembered as malicious haridans personifying the worst excesses of colonialism as vacuous fusspots whose lives were punctuated by a series of frivolous pastimes or as casualties of patriarchy constrained by male actions and gendered ideologies This book which places itself amongst other new imperial histories argues that the reality of the situation is of course much more intricate and complex Focusing on post war colonial Rhodesia *Gendering the Settler State* provides a fine grained analysis of the role s of white women in the colonial enterprise arguing that they held ambiguous and inconsistent views on a variety of issues including liberalism gender race and colonialism

Multidisciplinary Perspectives on Zimbabwe's Liberation Struggle Munyaradzi Nyakudya, Wesley Mwatwara, Joseph Mujere, 2022-11-15 This book provides a timely reconceptualization of Zimbabwe s anti colonial liberation struggle resisting simple binaries in favour of more nuanced critical analysis Most historiographies characterize Zimbabwe s liberation struggle as being defined by simple bifurcations along racial ethnic class and ideological perspectives This book argues that the nationalist struggle is far more complex than such simple configurations would suggest and that many actors have been overlooked in the analysis The book broadens our understanding by analysing the roles of a wide range of political figures organizations and members of the military as well as the media and the often overlooked part that women played Over the course of the book the contributors also reflect on the ways in which revolutionary figures have been repainted as sellouts in particular by the ZANU PF ruling party and what that means for the country s interpretation of their recent past Highlighting in particular the expertise of leading scholars from within Zimbabwe across a range of disciplines this book will be of interest to researchers of African history politics and postcolonial studies

The Rise of an African Middle Class Michael O. West, 2002-08-19 An in depth look at Africans who challenged the status quo in colonial Zimbabwe Impeccable and original scholarship American Historical Review Tracing their quest for social recognition from the time of Cecil Rhodes to Rhodesia s unilateral declaration of independence Michael O West shows how some Africans were able to avail themselves of scarce educational and social opportunities in order to achieve some

degree of upward mobility in a society that was hostile to their ambitions Though relatively few in number and not rich by colonial standards this comparatively better off class of Africans challenged individual and social barriers imposed by colonialism to become the locus of protest against European domination This extensive and original book opens new perspective into relations between colonizers and colonized in colonial Zimbabwe Offers an extremely sophisticated nuanced view of the social and political construction of an African middle class in colonial Zimbabwe Elizabeth Schmidt The Annual Report of the Secretary of Commerce United States. Department of Commerce, **Critical Realism** Justin Cruickshank,2003-09-02 Critical realism is a movement in philosophy and the human sciences most closely associated with the work of Roy Bhaskar Since the publication of Bhaskars A Realist Theory of Science critical realism has had a profound influence on a wide range of subjects This reader makes accessible in one volume key readings to stimulate debate about and within critical realism It explores the following themes transcendental realist the theory of explanatory critique dialectics Bhaskar s critical naturalist philosophy of science Syntactic Analysis and Description David Lockwood,2005-05-01 This book is designed to teach undergraduate and beginning graduate students how to understand analyse and describe syntactic phenomena in different languages The book covers every aspect of syntax from the basics to more specialised topics such as clitics which have grammatical importance but cannot be used in isolation and negation in which a construction contradicts the meaning of a sentence The approach taken combines concepts from different theoretical schools which view syntax differently These include M A K Halliday s systemic functional linguistics the stratificational school advocated by Sydney Lamb and Kenneth L Pike s tagmemic model The emphasis of the book is on syntactic structures rather than linguistic meaning and the book stresses the difference between a well formed sentence and a meaningful one The final chapter brings these two aspects together to show the connections between syntax and semology Each chapter concludes with exercises from a diverse range of languages and a list of major technical terms The book also includes a glossary as an essential resource for students approaching this difficult subject for the first time **Representation of Language** Georges Rey,2020-09-30 This book is a defense of a Chomskyan conception of language against philosophical objections that have been raised against it It also provides however a critical examination of some of the glosses on the theory the assimilation of it to traditional Rationalism a supposed conflict between being innate and learned an unclear ontology and the need of a representational pretense with regard to it and most crucially a rejection of Chomsky s eliminativism about the role of intentionality not only in his own theories but in any serious science at all This last is a fundamentally important issue for linguistics psychology and philosophy that an examination of a theory as rich and promising as a Chomskyan linguistics should help illuminate The book ends with a discussion of some further issues that Chomsky misleadingly associates with his theory an anti realism about ordinary thought and talk and a dismissal of the mind body problem s towards the solution of some of which his theory in fact makes an important contribution **Origins of Language** Sverker Johansson,2005-02-17

Sverker Johansson has written an unusual book on language origins with its emphasis on empirical evidence rather than theory building. This is a book for the student or researcher who prefers solid data and well supported conclusions over speculative scenarios. Much that has been written on the origins of language is characterized by hypothesizing largely unconstrained by evidence. But empirical data do exist and the purpose of this book is to integrate and review the available evidence from all relevant disciplines not only linguistics but also e.g. neurology, primatology, paleoanthropology and evolutionary biology. The evidence is then used to constrain the multitude of scenarios for language origins demonstrating that many popular hypotheses are untenable. Among the issues covered: 1 Human evolutionary history 2 Anatomical prerequisites for language 3 Animal communication and ape language 4 Mind and language 5 The role of gesture 6 Innateness 7 Selective advantage of language 8 Proto language

Lexicology and Corpus Linguistics M.A.K.

Halliday, 2004-06-22 Perspectives in Lexicology and Corpus Linguistics offers an introduction to words and corpus linguistics. From this foundation it explores the much wider issues that are inevitably raised but somehow marginalized in lexicology: the study of words and corpus linguistics, how are individual words integrated into language? What are the real benefits of studying the large quantities of text now available in corpora? How do we best conceptualize meaning itself?

Construing Experience Through Meaning M.A.K. Halliday, Christian Matthiessen, 2006-05-16 The subject of this book is how human beings construe their experience of the world. The construction of experience is usually thought of as knowledge represented in the form of conceptual taxonomies, schemata, scripts and the like. The authors offer an interpretation that is complementary to this: treating experience not as knowing but as meaning and hence as something that is construed in language. In other words, the concern is with the construal of human experience as a semantic system and since language plays the central role not only in storing and exchanging experience but also in construing it, language is taken as the interpretative base. The focus of the book is both theoretical and descriptive. The authors consider it important that theory and description should develop in parallel with constant interchange between the two. The major descriptive component is an account of the most general features of the ideational semantics of English which is then exemplified in two familiar text types: recipes and weather forecasts. There is also a brief reference to the semantics of Chinese. Theoretical issues are raised throughout as they become relevant to the discussion with the theoretical base being drawn from systemic functional linguistics. Both the theoretical and descriptive proposals offered in the book are compared and contrasted with approaches deriving from AI, cognitive science and cognitive linguistics.
