**The Permian Basin** West Texas Geological Society. Fall Symposium, 2003 **Geoinformatics** A. Krishna Sinha, 2006-01-01 The science of informatics in the broadest sense has been several thousands of years in the making With the recent emergence of large storage devices and high speed processing of data it has become possible to organize vast amounts of data as digital products with ontologic tags and concepts for smart queries Coupling this computational capability with earth science data defines the emerging field of geoinformatics Since the science of geology was established several centuries ago observations led to conclusions that were integrative in concept and clearly had profound implications for the birth of geology As disciplinary information about Earth becomes more voluminous the use of geoinformatics will lead to integrative science based discoveries of new knowledge about planetary systems Twenty one research papers co authored by 96 researchers from both earth and computer sciences provide the first ever organized presentation of the science of informatics as it relates to geology Readers will readily recognize the vast intellectual content represented by these papers as they seek to address the core research goals of geoinformatics Publisher's website Earth Sciences Imran Ahmad Dar, 2012-02-03 The studies of Earth's history and of the physical and chemical properties of the substances that make up our planet are of great significance to our understanding both of its past and its future The geological and other environmental processes on Earth and the composition of the planet are of vital importance in locating and harnessing its resources This book is primarily written for research scholars geologists civil engineers mining engineers and environmentalists Hopefully the text will be used by students and it will continue to be of value to them throughout their subsequent professional and research careers This does not mean to infer that the book was written solely or mainly with the student in mind Indeed from the point of view of the researcher in Earth and Environmental Science it could be argued that this text contains more detail than he will require in his initial studies or research Deepwater Foundations and Pipeline Geomechanics William O.

Geological Data Management J. R. A. Giles,1995 **Teaching Science and Investigating Environmental Issues with Geospatial Technology** James MaKinster,Nancy Trautmann,Michael Barnett,2013-11-05 The emerging field of using

geospatial technology to teach science and environmental education presents an excellent opportunity to discover the ways in which educators use research grounded pedagogical commitments in combination with their practical experiences to design and implement effective teacher professional development projects. Often missing from the literature are in depth explicit discussions of why and how educators choose to provide certain experiences and resources for the teachers with whom they work and the resulting outcomes. The first half of this book will enable science and environmental educators to share the nature and structure of large scale professional development projects while discussing the theoretical commitments that undergird their work. Many chapters will include temporal aspects that present the ways in which projects change over time in response to evaluative research and practical experience. In the second half of the book faculty and others whose focus is on national and international scales will share the ways in which they are working to meet the growing needs of teachers across the globe to incorporate geospatial technology into their science teaching. These efforts reflect the ongoing conversations in science education geography and the geospatial industry in ways that embody the opportunities and challenges inherent to this field. This edited book will serve to define the field of teacher professional development for teaching science using geospatial technology. As such it will identify short term and long term objectives for science environmental and geography educators involved in these efforts. As a result this book will provide a framework for future projects and research in this exciting and growing field.
