Effects Of Air Pollution On The Built Environment:

The Effects Of Air Pollution On The Built Environment Peter Brimblecombe, 2003-04-08 Air pollution damages materials but it has changed dramatically in the past century with a reduction in the concentration of corrosive primary pollutants in urban atmospheres At the same time architectural styles and types of materials have changed as we have moved to more organically rich photochemically active atmospheres Contemporary air pollutants have the potential to degrade organic coatings and polymers which are of great importance to modern structures while increasing amounts of fine diesel soot spoil the simple lines and smooth areas characteristic of many modern buildings This book examines a range of materials discussing the ways in which they are likely to be damaged by air pollutants It should be of interest to scientists and policymakers dealing with the effects of urban air pollution

Limestone in the Built Environment Bernard J. Smith, 2010 Limestone is a highly successful and widely used building material found in many important historic buildings and new monuments around the world Whilst its success reflects its durability under a wide range of environmental conditions there are still important questions surrounding the selection use and conservation of building limestones In order to make best use of new limestone today and to conserve old limestone most effectively we need to bring modern research methods to bear on understanding the characteristics of different limestones what mortars to use and how key limestones have responded to polluted atmospheres This volume brings

together recent inter disciplinary research on these issues illustrating the diversity of innovative techniques that are now being applied to furthering our understanding of building limestones

Synergistic Design of Sustainable Built Environments Chitrarekha Kabre,2020-11-09 Synergistic Design of Sustainable Built Environments introduces and illustrates a novel systems approach that fosters both design excellence and a leap toward a more biocentric ecologically sustainable design paradigm The book provides a deeper understanding of the theories and principles of biocentric design and offers detailed descriptions of the synergistic design process of integrating theories and principles into practice It also presents extensive thermal and visual built environment design strategies along with qualitative and quantitative information that designers can use to generate feasible solutions in response to varying climate and occupant comfort Features Examines the principles and practices of the synergistic design a fusion of anthropocentric and biocentric of sustainable built environments and how they relate to practical applications Presents climatic data and its analysis along with sun path diagrams for numerous cities to aid in the design of sustainable built environments in multiple regional contexts Includes numerous case studies of sustainable built environments in varying climatic zones Explains how renewable energy solar wind biomass geothermal hydro fuel cells can be successfully integrated in the built environment This forward thinking and highly illustrated book will be an invaluable reference to all those concerned with sustainable built environments and related architectural issues

Pollutant Dispersion in Built Environment Tingzhen Ming,Chong Peng,Tingrui Gong,Zhengdong Li,2017-02-16 This book discusses energy transfer fluid flow and pollution in built environments It provides a comprehensive overview of the highly detailed fundamental theories as well as the technologies used and the application of heat and mass transfer and fluid flow in built environments with a focus on the mathematical models and computational and experimental methods It is a valuable resource for researchers in the fields of buildings and environment heat transfer and global warming

Sustainable Built Environment - Volume II Fariborz Haghighat,Jong-Jin Kim,2009-11-10 Sustainable Built Environment is a component of Encyclopedia of Technology Information and Systems Management Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Environmental conservation and technological innovation are two principal forces that drive the building industry toward the future Technological innovation offers many opportunities to make buildings more dynamic and comfortable and occupants more comfortable and productive The necessity of environmental conservation on the other hand compels all types of developments and human activities to be environmentally responsive The content of the Theme on Sustainable Built Environment is organized with state of the art presentations covering several topics Urban Design Emerging Issues in Building Design Environment Energy and Health in Housing Design Culture Management Strategies and Policy Issues in the Sustainable Built Environment Using Technology to Improve the Quality of City Life Urban

and Regional Transportation which are then expanded into multiple subtopics each as a chapter These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

Women and Health Marlene B. Goldman, Rebecca Troisi, Kathryn M. Rexrode, 2012-12-31 Women and Health is a comprehensive reference that addresses health issues affecting women of all ages from adolescence through maturity It goes far beyond other books on this topic which concentrate only on reproductive health and has a truly international perspective It covers key issues ranging from osteoporosis to breast cancer and other cancers domestic violence sexually transmitted diseases occupational hazards eating disorders heart disease and other chronic illnesses substance abuse and societal and behavioral influences on health In this second edition of Women and Health chapters thoughtfully explore the current state of women's health and health care including the influences of sex and gender on the occurrence of a wide variety of diseases and conditions All chapters have been extensively updated and emphasize the epidemiology of the condition the etiology occurrence primary and secondary prevention screening risk factors surveillance changing trends over time and critical analysis of the diagnostic and treatment options and controversies Treatment sections in each chapter have been expanded to create a stronger dialogue between epidemiologists and women's health practitioners Saves researchers and clinicians time in quickly accessing the very latest details on a broad range of women's health issues as opposed to searching through thousands of journal articles Provides a common language for epidemiologists public health practitioners and women's health specialists to discuss the behavioral cultural and biological determinants of women's health Researchers and medical specialists will learn how the gender specific risks and features of one organ system's diseases affect the health of other organ systems For example Hormone replacement therapy used to treat imbalance within the endocrine system is also being used to prevent and treat cardiovascular disease Drugs developed for type 2 diabetes are now being used in chemoprevention Orients the non gerontologist about the importance of considering the entire life cycle of women within research designs and treatment plans Professors teaching courses in women's health will use slides and additional materials to structure lectures courses students will use slides as a unique resource to study for exams

Smart Technologies and Design For Healthy Built

Environments Ming Hu, 2020-09-10 Smart Technologies and Design for Healthy Built Environment connects smart technology to a healthy built environment that builds upon the sustainable building movement It provides an overall summary of the state of the art technologies that are applied in the built environment The book covers a broad spectrum of smart technology categories ranging from dynamic operability energy efficiency self regulating and self learning systems and responsive systems The foreseeable challenges that are associated with smart technologies are discussed and outlined in the book Firstly this book provides a snapshot of state of the art smart technologies being applied in the built environment It covers a broad spectrum of smart technology categories ranging from dynamic operability energy efficiency self regulating

and self learning systems to responsive systems Secondly this book provides in depth analysis of the four primary components of health biological physical physiological and psychological their effects on wellbeing and cognitive performance are introduced as well Thirdly it connects smart technologies to those health influencing factors by reviewing three completed smart building projects This book can also serve as a basis for education and discussion among professionals and students of diverse backgrounds who are interested in smart technologies smart building and healthy building Smart Technologies and Design for Healthy Built Environment serves as the basis for education and discussions among professionals and students who are interested in smart technologies smart building and healthy building as it bridges the gap between smart technologies and a healthy built environment The book also provides a foundation for anyone who is interested in the impact of smart technology on the health of built environment

Built environments are complex emergent systems and require contextual analysis. They should be understood before reconsidering how professionals and researchers of the built environment are educated and trained to reduce the gap between knowledge practice and real world circumstances. There is an urgent need to rethink the role of policy makers, researchers, practitioners and laypeople in the construction, renovation and reuse of the built environment in order to deal with numerous environmental, ecological, economic, financial and social ethical challenges of providing a habitat for current and future generations in a world of continual change. These challenges are too complex to be dealt with only by one discipline or profession. Combinations of different types of knowledge, knowing in praxis and tacit knowledge are needed. This book presents and illustrates recent innovative contributions with case studies focusing on five strategic domains and the interrelations between them. These transdisciplinary contributions apply concepts, methods and tools that facilitate convergence and concerted action between participants collaborating in policy definition and project implementation. The methods and tools include experiments in living labs, prototypes on site and virtual simulations as well as participatory approaches including citizen science, the development of alternative scenarios and visioning plausible futures.

People's desire to understand the environments in which they live is a natural one. People spend most of their time in spaces and structures designed, built and managed by humans and it is estimated that people in developed countries now spend 90 percent of their lives indoors. As people move from homes to workplaces, traveling in cars and on transit systems, microorganisms are continually with and around them. The human-associated microbes that are shed along with the human behaviors that affect their transport and removal make significant contributions to the diversity of the indoor microbiome. The characteristics of healthy indoor environments cannot yet be defined nor do microbial clinical and building researchers yet understand how to modify features of indoor environments such as building ventilation systems and the chemistry of building materials in ways that would have predictable impacts on microbial communities to promote health and prevent disease. The factors that affect the environments within buildings, the ways in which building characteristics influence the composition and function of indoor microbial communities and the ways in which these microbial communities relate to human health and well-being are extraordinarily complex and can be explored only as a dynamic interconnected ecosystem by engaging the fields of microbial biology and ecology, chemistry, building science and human physiology. This report reviews what is known about the intersection of these disciplines and how new tools may facilitate advances in understanding the

ecosystem of built environments indoor microbiomes and effects on human health and well being It offers a research agenda to generate the information needed so that stakeholders with an interest in understanding the impacts of built environments will be able to make more informed decisions

Environmental Policy and Public Health Barry L. Johnson, Maureen Y.
