Effects Of Smoking:

The Health Consequences of Smoking United States. Public Health Service,1972 Smoking and Its Effects on Health WHO Expert Committee on Smoking and its Effects on Health,1975 **Tobacco or Health?** Knut-Olaf Haustein,2002-09-24

Science tends to generalize and generalizations mean simplifications And generalizations are also more satisfying to the mind than details Of course details and generalizations must be in proper balance Generalizations can be reached only from details while it is the generalization which gives value and interest to the detail A Szent Gyorgy Science 1964 The first edition of this book published in German as Tabak abh ngigkeit in 2001 was prompted by the fact that no single volume was available in Germany or elsewhere summarising the adverse repercussions of cigarette smoking on human health As far as my own research was able to ascertain the last comprehensive work dealing with this subject was written in Germany by the Dresden internist F Lickint whose Tabak und Organismus was published in 1939 by the Hippokrates Verlag All subsequent monographs in this field have tended to focus on detailed aspects and there has been no shortage of publications on subjects such as how smokers can quit smoking healthy eating for smokers etc Friends and colleagues abroad have urged me to prepare an English language version of Tabakabh ngigkeit In gladly complying with this suggestion I have intentionally prepared an updated and slightly enlarged new edition taking account of the rapidly proliferating literature on the subject up to the start of 2002 The harmful sequelae of smoking are played down by politicians in many industrialised countries including Germany *Smoking and Health Bulletin* ,1984 **Reducing the Health Consequences of Smoking** United States. Public Health Service. Office of the Surgeon General,1989 **The Health Consequences of Smoking** National Clearinghouse for Smoking and Health,1968 **Bibliography on Smoking and Health** ,1982 *Directory, On-going Research in Smoking and Health* , **Smoking and Health Bulletin** , *The Health Consequences of Smoking* National Clearinghouse for Smoking and Health,1973 Smoking and Reproduction, Pregnancy, the Fetus, and the Newborn Charlotte Kenton,1985 **Reducing the Health Consequences of Smoking** ,1989 **How Tobacco Smoke Causes Disease** United States. Public Health Service. Office of the Surgeon General,2010 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies Mechanisms of disease are important because they may provide plausibility which is one of the guideline criteria for assessing evidence on causation This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke This evidence is relevant to understanding how smoking causes disease to identifying those who may be particularly susceptible and to assessing the potential risks of tobacco products Smoking and Health Bulletin ,1979 Annual cumulation issued as Bibliography on Smoking and Health 1988 **Stoelting's Anesthesia and Co-Existing Disease**

Smoking David G.

Gilbert,2014-06-03 Personality psychopathology and emotional factors are intimately related to smoking yet there are few efforts to integrate relevant findings in these areas Taking a comprehensive current and detailed view this text develops an empirically based model that reflects the multi dimensional individual difference related causal paths associated with smoking and its reinforcing and affect modulating effects Starting with a review of models of smoking motivation this volume then goes on to discuss effect and emotion and the nature biological bias and relationships among personality temperament and psychopathology Other chapters focus attention on questions of when in whom and what mechanisms promote and reinforce smoking and tobacco use such as gender differences Utilising the findings of these chapters the integrative biopsychosocial STAR Model Of Smoking Effects And Motivation Is Presented And Its Implications are examined As the percentage of smokers in the general population decreases a growing number of those continuing to smoke will be even more difficult to reach Such individuals will benefit from the individualised and intensive interventions suggested here This text is intended to be of use to psychologists psychiatrists physicians epidemiologists sociologists and other health professionals
