Geriatric Medicine Christine K. Cassel, Rosanne Leipzig, Harvey Jay Cohen, Eric B. Larson, Diane E. Meier, 2006-05-29

Since the publication of the third edition of *Geriatric Medicine*, extraordinary advances have occurred in the science of aging and the potential for biomedical research to give us answers to many, if not most, of the age-related disorders that threaten the quality of life in older years. At the most basic level, the successful mapping of the human genome was declared complete in the fall of 2000. Understanding the map of the human genome is as important as understanding the map of genomes of important laboratory species, ranging from the microscopic worms and fruit flies used in most classic genetic studies to rodents such as laboratory mice and eventually to primates, on which much of the research on the aging human brain is done. The genetic maps of all of these species, including our own, does not answer clinical questions, but it does open the door to dramatic, rapid, and efficient answers to questions about the genetic polymorphisms related to diseases in humans. The telomerase story also unfolded since the third edition. Telomerase is an enzyme responsible for maintaining the telomeres, the redundant DNA portions at the end of chromosomes, whose shortening seems to be linked directly to cell senescence, apoptosis, and the control over cell death, which at the level of the individual cell seems to be linked to the decline of organ function and eventually aging and death within the organism.

Geriatric Medicine Frank Lally, Christine Roffe, 2014

People are living longer and the population over the age of 60 is burgeoning, with repercussions for health services and healthcare expenditure in developed countries. Crucially, disease aetiology, diagnosis, and treatment in older people differ from the general adult

population Older people often have complicated co morbidities and respond to treatment in different ways compared to younger people Evidence of efficacy of different treatments is often lacking because older people are under represented in clinical trials and the specific needs of older people are rarely discussed specifically in more general texts Geriatric medicine an evidence based approach is a clinical reference for health care professionals who manage older patients and summarizes up to date research literature in a style that can be directly applied by busy healthcare professionals and provide a useful resource for reference *Geriatric Medicine* Michael R. Wasserman, Debra Bakerjian, Sunny Linnebur, Sharon Brangman, Matteo Cesari, Sonja Rosen, 2024-02-19 Both volumes sold as a combined set for a one time purchase Older adults represent the most rapidly growing demographic in the U S and in many developed countries around the world The field of geriatric medicine is still relatively young and is only recently seeing a significant increase in peer reviewed literature Medicare and Medicaid expenditures related to older adults are nearly a trillion dollars year in the US How our healthcare system cares for older adults and how those older adults navigate an increasingly complex system is of the utmost importance According to the Institute of Medicine physicians and other healthcare professionals receive an inadequate amount of training in geriatric medicine Geriatric medicine is based on the concept of delivering person centered care with a focus on function and quality of life It is essential that physicians nurse practitioners physician assistants pharmacists social workers and other health care professionals all be knowledgeable about the geriatric approach to care Geriatric medicine varies from most other fields in medicine While many specialties function on the basis of evidence based literature geriatricians and other clinicians caring for older adults must integrate relatively limited evidence with variable physiological changes and complex psychosocial determinants Geriatricians are used to caring for 90 year olds with multiple chronic illnesses Their variable physiology leads to uncertain responses to pharmacotherapy and their personal goals and wishes need to be incorporated into any plan of care Practicing geriatric medicine requires the ability to see patterns But it goes one step further as the rules are constantly in flux Every patient is an individual with particular needs and goals In order to provide true person centered care to older adults one has to incorporate these factors into the decision making process The proposed handbook is designed to present a comprehensive and state of the art update that incorporates existing literature with clinical experience Basic science and the physiology of aging create a background but are not the main focus This is because every chapter has been written through the lens of person centered care This book is about focusing on what matters to the person and how that is not always about pathology and physiology The reader generally will not find simple solutions to symptoms diseases and syndromes In fact the key to caring for geriatric patients is the ability to think both critically and divergently at the same time Geriatrics encompasses multiple disciplines and spans all of the subspecialties It requires knowledge of working within an interdisciplinary team It requires an appreciation of how quality of life varies with each individual and creates treatment and care plans that also vary And most of all it requires a firm commitment to first

learning who the person is so that all of the necessary data can be analyzed and integrated into a true person centered plan of care This book aims to serve as an unparalleled resource for meeting these challenges Updated and revised from the previous edition this text features over 40 new peer reviewed chapters new references and a wide array of useful new tools that are updated on a regular basis by interdisciplinary and interprofessional experts in geriatric medicine **Oxford**

GERIATRIC MEDICINE AND ELDERLY CARE Lecture Notes Ninth Edition An essential resource for meeting the needs of an ageing patient population. As the global population ages, geriatric medicine is steadily becoming one of the most important areas of medical research and care. Healthcare systems in developed countries are adapting to this shift in the population, and doctors are finding that a larger and larger proportion of their patients are older. Current medical training often does not include adequate coverage of geriatric medicine, and students may well find they require more extensive resources for meeting older patients' needs. *Lecture Notes Geriatric Medicine and Elderly Care* meets this need with a set of comprehensive but straightforward introductions to the foundational concepts of geriatric medicine. Combining a user-friendly format with extensive, high-quality figures and illustrations, it is a must-have resource for medical students looking to deepen their knowledge of a widening area of essential care. Now thoroughly revised and updated to reflect the latest research and medical knowledge of ageing and elder care, this is an essential contribution to the popular *Lecture Notes* series. Readers of the ninth edition of *Lecture Notes Geriatric Medicine and Elderly Care* will also find new chapters on the science of ageing, including immunosenescence and rejuvenation research, and geriatric oncology. Full coverage of the British Geriatrics Society and European undergraduate curriculums. A companion website with appendices, key revision points for each chapter, and further readings. *Lecture Notes Geriatric Medicine and Elderly Care* is ideal for medical students and Foundation Year doctors in most specialties who are treating frail older people. It also provides a starting point for revision for higher specialty examinations in geriatric medicine.
