New Directions in Understanding Dementia and Alzheimer's Disease

Taher Zandi, Richard J. Ham, 2012-12-06 The management of Alzheimer's Disease and the related dementias is one of the major challenges to health care professionals and American society at large for the coming decade and the coming millennium The rapid growth of the over eighty five population the group which as recent studies have confirmed and as many of us clinicians have long suspected has an even higher prevalence than previously quoted of dementing disorders is the major cause of this We are thus challenged by as Bernard Issacs used to call it the survival of the unfittest as well as the optimistic approach of bringing life to years as John F Kennedy said The fact is that we as a society tend to confuse treatment and cure and prevention As the proceedings of the conference which this book represents emphasize there is considerable

work going on about the potential prevention of or at least the reduction of symptomatology in these illnesses by interventions genetically chemically and so forth However the more we find out the more complicated it becomes and the more heterogeneous Alzheimer s and the related disorders appear to be not only in their manifestations as clinicians have long recognized but also in the individual initiating and underlying processes For these reasons absolute preventive techniques or the likelihood of an intervention which will reverse the process in a high proportion of patients do not appear to be just around the corner
