German and Japanese Business in the Boom Years Matthias Kipping, Akira Kudo, Harm G. Schröter, 2004-07-31 This edited volume examines the American influence on West German and Japanese industry from the 1950s to the 1970s providing a valuable contribution to the debate on Americanization from a historical and comparative perspective Individual contributions provide an in depth analysis of the adoption and modification of management and technological issues from the US in West Germany and Japan at the micro economic level *Japanese and German Enterprises* Toshio Yamazaki, 2024-12-09 The objective of this book is to analyze and compare the processes of corporate expansion of postwar Japan and Germany It examines the evolution of distinctive Japanese and German business management styles through the adoption of American management methods thereby establishing a system of industrial concentration in contrast to the US de concentration policy This is the first time that the book draws on a range of topics related to business administration including the concentration of enterprises management and production systems management education marketing organizational structure and corporate governance The book compares the Japanese and German models Japanese enterprises developed a management style that was suitable for American and Japanese markets in part due to the underdeveloped Asian markets Meanwhile German enterprises established a management style for European markets The book considers the specificities of the Japanese management model predicated on thorough cost reduction and few product defects In contrast the German management model placed a premium on differentiation based on product quality and functionality with a particular focus on core markets and the skills of the workforce The book posits that corporate expansion was a determining factor in the regionalization of each country Japan underwent a transformation toward Asianization which depended on production and markets in Asia after the 1990s Germany on the other hand consistently pursued Europeanization after the war in two complementary ways 1 a heavy reliance on the European region and 2 the endeavor to advance European integration Transformations in business management are analyzed using the author's two original frameworks 1 The term total system of business management denotes the fundamental conditional structures that regulate and define the established methods of business management within the confines of capitalism in a specific country 2 The term reframing is used to explain the adaptation modification and adjustment of one country's particular management style to another nation These arguments reframe how we understand the historical processes of corporate expansion and provide milestones for a comparative study of management through common factors and characteristics of management **German Business Management** Toshio Yamazaki, 2013-05-28 How are German capitalism and German business management to be understood from the perspective of Japan Both Germany and Japan as defeated nations in World War II received significant American leadership and support after the war Both countries developed their enterprises industries and economy by deploying and adapting technology and management methods from the United States while establishing systems of industrial

concentration in their own ways By these means both nations became major trading countries However current economic and business conditions differ greatly between Germany and Japan In trade American influence on Japanese business is still strong Japan could not and cannot establish a complementary relationship with American industrial sectors and their products in the American market In addition a common market structure like the E U does not exist in Asia In contrast to Japan Germany developed independently from the American influence and became part of a well integrated regional economy What were the driving forces that created those differences That question is approached from a Japanese point of view in this book based on the assumption that the origins of distinct characteristics of German business management after World War II were developed in the 1950s and 60s The book analyzes the transformation of business management in Germany and explains the characteristics and structures of German management The author describes how the development of German companies determined the current German condition the Europeanization of Germany while the world faced the globalization process Demonstrating the basic foundation of European integration by analyzing market factors in Europe as well as the internal structural transformation of management in Germany this book is a valuable resource for undergraduate and graduate students educators and researchers in the fields of businessmanagement business history and economic history

Schröter,2005-12-05 One of the main features of the world economy since the late nineteenth century has been the growing dominance of the American economy in both quantitative and qualitative terms Aspects of this development e g rationalization or the world wide diffusion of Coca Cola have been researched but largely in isolation Americanization of the European Economy provides a comprehensive yet compact survey of the growth of American economic influence in Europe since the 1880s Three distinct but cumulative waves of Americanization are identified Americanization was and still is a complex process of technological political and cultural transfer and this overview explains why and how the USA and the American model of industrial capitalism came to be accepted as the dominant paradigm of political economy in today s Europe Americanization of the European Economy summarizes the ongoing discussion by business historians sociologists and political scientists and makes it accessible to all

types of readers who are interested in political and economic development      **The Making of Global Capitalism** Leo Panitch, Sam Gindin, 2013-10-08 The all encompassing embrace of world capitalism at the beginning of the twenty first century was generally attributed to the superiority of competitive markets Globalization had appeared to be the natural outcome of this unstoppable process But today with global markets reeling and increasingly reliant on state intervention to stay afloat it has become clear that markets and states aren't straightforwardly opposing forces In this groundbreaking work Leo Panitch and Sam Gindin demonstrate the intimate relationship between modern capitalism and the American state The Making of Global Capitalism identifies the centrality of the social conflicts that occur within states rather than between them These emerging fault lines hold out the possibility of new political movements that might transcend global markets

**Transformations of Retailing in Europe after 1945** Lydia Langer, 2016-02-17 After World War II structures practices and the culture of retailing in most West European countries went through a period of rapid change The post war economic boom the emergence of a mass consumer society and the adaptation of innovations which already had been implemented in the USA during the interwar period revolutionized the world of getting and spending But the implementation of self service and the supermarket the spread of the department store and the mail order business were not only elements of a transatlantic catch up process of Americanization of retailing National patterns of the retail trade and specific cultures of consumption remained crucial and long term processes of change starting in the 1920s or 1930s also had an impact on the transformation of retailing in post war Europe This volume presents a series of case studies looking at transformations of retailing in several European countries offering new insights into the structural preconditions of the emerging mass consumer societies and also into the consequences consumerism had on the practices of retailing      **Trademarks, Brands, and Competitiveness** Teresa da Silva Lopes, Paul Duguid, 2010-05-04 Trade Marks Brands and Competitiveness brings together scholars from a variety of disciplines to provide a critical account of the contribution of branding to economic growth the relationship between trademark law and brand strategy and the building and repositioning of individual brands as case studies in the effects of competition      Tin and Global Capitalism, 1850-2000 Mats Ingulstad, Andrew Perchard, Espen Storli, 2014-09-04 For most of the twentieth century tin was fundamental for both warfare and welfare The importance of tin is most powerfully represented by the tin can an invention which created a revolution in food preservation and helped feed both the armies of the great powers and the masses of the new urban society The trouble with tin was that economically viable deposits of the metal could only be found in a few regions of the world predominantly in the southern hemisphere while the main centers of consumption were in the industrialized north The tin trade was therefore a highly politically charged economy in which states and private enterprise competed and cooperated to assert control over deposits smelters and markets Tin provides a particularly telling illustration of how the interactions of business and governments shape the evolution of the global economic trade the tin industry has experienced extensive state intervention during times of war

encompasses intense competition and cartelization and has seen industry centers both thrive and fail in the wake of decolonization The history of the international tin industry reveals the complex interactions and interdependencies between local actors and international networks decolonization and globalization as well as government foreign policies and entrepreneurial tactics By highlighting the global struggles for control and the constantly shifting economic geographical and political constellations within one specific industry this collection of essays brings the state back into business history and the firm into the history of international relations

**Reappraising State-Owned Enterprise** Franco Amatori, Robert Millward, Pier Angelo Toninelli, 2013-06-17 After a quarter century of almost general condemnation and rebuttal of the entire nationalization experience it appears that there are second thoughts about governmental direct intervention in the economy Reappraising State Owned Enterprise deals with a topic often undervalued in the past decade but which now with the crisis of 2008 2009 calls for greater attention the direct intervention of the State as Entrepreneur The collection of essays in this volume prepared by some of the leading authorities in the field offers a contribution to this debate by providing a balanced assessment of two of the most relevant experiences of mixed economies the United Kingdom and Italy In this respect a comparison between these two countries is very much appropriate since in both nations the State played an important role as Entrepreneur starting in the early 20th century In Great Britain and Italy the heyday of the State as Entrepreneur was in the years right after WWII when it was used as a tool for promoting a modern society in which citizens acquired a stronger sense of belonging to their nations The UK and Italy saw the State take on a too pervasive role in the 70s the two nations responded in different ways In the 1980s Great Britain embarked on a harsh process of privatizations while Italians struggled on until finally submitting to privatizations in their nation in the following decade The deep crisis of the final years of the 21st century forced both nations to reconsider State interventions as an appropriate tool in order to protect the wellbeing of the national economy

**International Business and National War Interests** Ben Wubs, 2008-06-11 This book deals with the activities of the Anglo Dutch multinational during the war Given the various threats faced by Unilever during the Nazi period Ben Wubs argues that it was not self evident that the company would survive the war Based on research into company sources which were hitherto unavailable he shows the effect of the war on Unilever

**The Dynamics of Big Business** Veronica Binda, 2013-06-26 Throughout the Twentieth Century big business has been a basic institution Large corporations have provided a fundamental contribution to the wealth of nations and at the same time have had a remarkable impact on the political and social systems within which they have operated It is difficult to understand the development of the most advanced economies if we do not consider the specific evolution of big business in every national case On the other hand it is not possible to explain the shape and behavior of big business without considering its development as part of the history of the country in which they operate The largest US German British and French firms were key actors in favoring their nations development and even at the end of the Twentieth Century made a very important contribution to their growth In many

countries a stable core of large corporations developed only relatively lately or did not develop at all and under these circumstances big business was not able to significantly participate in the economic growth of such countries. Scholars who dealt with the economic history of Italy and Spain are generally unanimous in tagging these nations as industrial late comers ineffective in promoting big autochthonous private and State owned firms dominated by family companies and characterized by a strong competitive advantage on the part of small and medium sized enterprises. At the same time Spanish and Italian business and economic historians have tended to say little about the role and features of big business. This book thus fills a significant gap in the work on the development of Southern European capitalism and its large corporations by analyzing the Italian and Spanish cases and comparing them with each other and with what has occurred in the United States and in the largest European nations. Examining both the macro dynamics national but also supra national and the micro level utilizing samples of big corporations and going deeply into some company cases this volume identifies some important protagonists of the Italian and Spanish economies such as the State families and foreign investors and investigates a wider panorama which includes the political economic and social relationships of the corporations providing insights into the form of capitalism that exists in these countries.

**Varieties of Capitalism and Business History** Keetie E. Sluyterman, 2014-11-27 The financial crisis of 2008 brought new urgency to the question how best to organise national economies. This volume gives a business history perspective on the Varieties of Capitalism debate and considers the respective merits of the liberal and coordinated market economies. It looks at individual firms and business people as well as institutions and takes a long term perspective by covering the whole 20th century. The authors examine both continuity and change with a particular focus on the Netherlands a nation with an open economy situated between two countries that oppose each other in the way they organize their economies Germany and Great Britain. The Netherlands also provides an important case study with Dutch business maintaining strong links to the United States widely considered to be the typical liberal market economy. Contributors address the main topics of the capitalism debate including labour relations corporate governance the firm and its leaders coordination between firms innovation multinationals as agents of change and economic performance. They show that the Netherlands moved from a mostly liberal market economy before 1914 towards a coordinated market economy from the 1930s onwards and up to a certain extent back again to a more liberal market economy. Under both varieties of capitalism the country experienced economic growth and stagnation but a more equal division of wealth occurred in the coordinated market economy only. Wars and international economic crises offered moments for revaluation and changes of tack. This book raises questions for every country around the globe. How is change being brought about? Can one see different results from a liberal or a more coordinated market economy? And most critically which system is more effective in bringing prosperity and enabling enough people to share in the wealth.

**The Power of Corporate Networks** Thomas David, Gerarda Westerhuis, 2014-08-27 Corporate networks the links between companies and their leaders reflect a country's economic
