Geomorphology of Cold Environments Jean Tricart, 1970 Text on periglacial geomorphology in three parts I Extent of frost climate phenomena II Periglacial processes and landforms III Glacial processes and landforms Geomorphic Agent in Cold Climates Matti Seppälä, 2004-06-17 A 2004 monograph describing wind generated polar landforms both modern day and those preserved in the geological record **Geomorphology of Cold Environments. Translated from the French** J. Tricart, 1969 Source-to-Sink Fluxes in Undisturbed Cold Environments Achim A. Beylich, John C. Dixon, Zbigniew Zwoliński, 2016-07-07 Provides the first quantitative overview of global source to sink fluxes in cold climate environments for graduate students and researchers Periglacial Geomorphology Athol D. Abrahams, John C. Dixon, 2020-05-10 This book first published in 1992 contains the proceedings of the 22nd Binghamton Geomorphology Symposium and highlights the quantity and diversity of periglacial geomorphic research being undertaken in Arctic and alpine environments The articles explore a variety of geomorphic processes and examine the potential impacts of global change on the nature and extent of permafrost and seasonal ice phenomena MOUNTAIN GEOMORPHOLOGY Phil Owens, Olav Slaymaker, 2014-02-04 Mountains represent one of the most inspiring and attractive natural features on the surface of the earth Visually they dominate the landscape However the increasing realization of the fragility of mountain areas because of changes in land use management and climate combined with an understanding of their importance for water and other natural resources has resulted in a growing interest in mountain environments in recent years Hence Mountain Geomorphology represents a timely and unique contribution to the literature Written by a team of international experts this book is divided into three sections which consider historical functional and applied mountain geomorphology from both global and local perspectives Historical mountain geomorphology focuses on the evolution of landforms Functional mountain geomorphology emphasises the interaction between processes and landforms while applied mountain geomorphology concerns the interrelationships between geomorphological processes and society Mountain Geomorphology is a valuable source of information for students studying mountain geomorphology and also for academics and research scientists interested in mountain environments The History of the Study of Landforms or the Development of Geomorphology, Volume 5 T.P. Burt, A.S. Goudie, H.A. Viles, 2022-10-20 Co published with British Society for Geomorphology This volume is the fifth in the definitive series The History of the Study of Landforms or the Development of Geomorphology Volume 1 1964 dealt with contributions to the field up to 1890 Volume 2 1973 with the concepts and contributions of William Morris Davis and Volume 3 1991 covered historical and regional themes during the classic period of geomorphology 1890 1950 Volume 4 2008 concentrated on studies of geomorphological processes and Quaternary geomorphology between 1890 and 1965 by the end of this period process based studies had become dominant Volume 5 builds on this platform covering in detail the revolutionary changes in approach that characterized the study of

geomorphology in the second half of the twentieth century It is divided into three sections the first deals with changes in approach and method the second with changes in ideas and the broader scientific context within which geomorphology is studied and the final section details advances in research on processes and landforms. The volume s objective is to describe and analyse many of the developments that provide a foundation for the rich and varied subject matter of twenty first century Treatise on Geomorphology, 2013-02-27 The changing focus and approach of geomorphology SIPRE Report . geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to

The Periglacial Environment Hugh M. French, 2017-10-27 The Periglacial Environment Fourth Edition is an authoritative overview of the world's cold non glacial environments First published in 1976 and subsequently revised in 1996 and 2007 the text has been the international standard for nearly 40 years The Fourth Edition continues to be a personal interpretation of the frost induced conditions geomorphic processes and landforms that characterize periglacial environments Part One discusses the periglacial concept and describes the typical climates and ecosystems that are involved Part Two describes the geocryology permafrost science associated with frozen ground Part Three outlines the weathering and geomorphic processes associated with cold climate conditions Part Four provides insight into the periglacial environments of the Quaternary especially the Late Pleistocene Part Five describes some of the problems associated with human occupancy in regions that experience frozen ground and cold climate conditions Extensively revised and updated Written by an expert with over 50 years of field research Draws upon the author's personal experience from Northern Canada Alaska Siberia Tibet Antarctica Svalbard Scandinavia southern South America Western Europe and eastern North America This book is an invaluable

reference for advanced undergraduates in geography geology earth sciences and environmental sciences programs and to resource managers and geotechnical engineers interested in cold regions Canada's Cold Environments Hugh M. French, Olav Slavmaker, 1993 Low temperatures wind chill snow sea ice and permafrost have been primary characteristics of Canada's northern and alpine environments during the past two million years. The evolution of Canada's cultural landscapes the processes of settlement of rural areas and the present interaction of Canadian industrial society with its biophysical environment are all deeply influenced directly or indirectly by the frigidity of the greater part of the country The phenomenon of global warming if it occurs will lessen this coldness but its impact on temperature extremes sea ice regimes vegetation snow distribution permafrost glaciers lakes rivers and mountain hazards are all the subject of intensive research the highlights of which are reviewed in Canada's Cold Environments Eleven of Canada's leading geographers geologists and ecologists provide an authoritative yet readable scientific statement about the physical nature of Canada's coldness They focus on the distinctive attributes of Canada's cold environments their temporal and spatial variability and the constraints that coldness places on human activity The book is aimed at environmental scientists at all levels who need informed **Geomorphology of Proglacial Systems** Tobias overviews of the substantive findings on a range of cold related topics Heckmann, David Morche, 2018-11-29 This book discusses the recession of alpine glaciers since the end of the Little Ice Age LIA which has been accelerating in the past decades It provides an overview of the research in the field presenting definitions and information about the different proglacial areas and systems A number of case studies are from the PROSA project group which encompasses the expertise of geomorphologists geologists glaciologists and geodesists The PROSA joint project High resolution measurements of morphodynamics in rapidly changing PROglacial Systems of the Alps is determined to tackle the problems of geomorphic activity on sediment export through a quantification of sediment fluxes effected by the aforementioned geomorphic processes within the forefield of the Gepatschferner glacier Central Alps Austria **Handbook of Geomorphology** Kenneth J Gregory, Andrew S Goudie, 2011-06-13 Geomorphology is the study of the Earth s diverse physical land surface features and the dynamic processes that shape these features Examining natural and anthropogenic processes The SAGE Handbook of Geomorphology is a comprehensive exposition of the fundamentals of geomorphology that examines form process and applications of the discipline Organized into five substantive sections the Handbook is an overview of Foundations and Relevance including the nature and scope of geomorphology the origins and development of geomorphology the role and character of theory in geomorphology geomorphology and environmental management and geomorphology and society Techniques and Approaches including observations and experiments geomorphological mapping the significance of models process and form dating surfaces and sediment remote sensing in geomorphology GIS in geomorphology biogeomorphology human activity Process and Environment including the evolution of regolith weathering fluids flows and fluxes sediment transport and deposition hill slopes riverine environments glacial

Gutierrez Elorza, 2005-12-29 During the past few decades climatic geomorphology has been substantially enlarged in knowledge thanks to numerous detailed investigations the application of a large number of techniques and the acquisition of abundant absolute dates The challenge of predicting the effects of the prophesied future global warming on morphogenetic processes and landforms has encouraged geomorphologists to study the Late Pleistocene and Holocene climatic changes from the geomorphological and geological record The advances achieved in the field of climatic geomorphology during the past years are reflected by the publication of several specific monographs about the different morphoclimatic zones The aim of this book is to provide an up to date general view of this branch of geomorphology It includes a chapter on applied geomorphology for each morphoclimatic zone providing an approximation of the main environmental problems Geoscientists geomorphologists
