Geomorphology Of The Tropics:

Tropical Geomorphology Avijit Gupta, 2011-08-04 Although similar geomorphic processes take place in other regions in the tropics these processes operate at different rates and with varying intensities Tropical geomorphology therefore provides many new discoveries regarding geomorphic processes This textbook describes both the humid and arid tropics It provides thoroughly up to date concepts and relevant case studies and emphasises the importance of geomorphology in the management and sustainable development of the tropical environment including climate change scenarios The text is supported by a large number of illustrations including satellite images Student exercises accompany each chapter Tropical Geomorphology is an ideal textbook for any course on tropical geomorphology or the tropical environment and is also invaluable as a reference text for researchers and environmental managers in the tropics

Applied Geomorphology in the Tropics P. R. Sharma, Shiv Pujan Mishra, 1993 Contributed articles by geographers geologists and geomorphologists on applied geomorphology in honour of Prof N K P Sinha

Geomorphology of the Tropics Alfred Wirthmann, 2013-04-17 Geomorphological research in the humid to seasonal tropics has primarily concentrated on the most characteristic landform assemblage of this zone namely that of stepped largely undissected etchplains often dotted with inselbergs and cutting across ancient basement rocks Although the author discusses extensively this subject he puts particular emphasis on the differences of chemical weathering and land forming processes on rocks of various lithology and structure This contrast becomes most evident when comparing the highly resistant quartzitic sediments often covering the basement rocks with the easily weathered volcanics e g the Deccan traps of India The book was first published in German in 1987 However the present version is much more than a translation encompassing a range of new ideas and findings in the field of tropical geomorphology The number of maps and illustrations has also been increased

Humid Tropical Geomorphology A. Faniran, L. K. Jeje, 1983

Geomorphology in the Tropics Michael F. Thomas, 1994-07-19 This source book has been designed for students of tropical environments who already have some knowledge of geomorphology and related Earth sciences It explores the special characteristics of the tropics and their impact on the balance of forces and materials within denudation systems

Environmental Change and Tropical Geomorphology Ian Douglas, Tom Spencer, 2020-05-11 The tropics provide the key to understanding much biological and Earth science This is particularly true for the study of landforms which in higher latitudes suffer great seasonal contrasts in process intensity and type and which often in the past underwent the dramatic changes of glaciation and periglaciation Yet studies in the tropics have shown that the legacy of past climate changes is much more dramatic than was formerly believed This book first published in 1985 brings together the variety of evidence about such environmental changes over a variety of timescales and sets it against the current knowledge of the nature of geomorphic processes in the tropics

Climatic Geomorphology M. Gutierrez Elorza, 2005-12-29 During the past few decades climatic geomorphology has been substantially enlarged in knowledge thanks to numerous detailed investigations the application of a large number of techniques and the acquisition of abundant absolute dates The challenge of predicting the effects of the prophesied future global warming on morphogenetic processes and landforms has encouraged geomorphologists to study the Late Pleistocene and Holocene climatic changes from the geomorphological and geological record The advances achieved in the field of climatic geomorphology during the past years are reflected by the publication of several specific monographs about the different morphoclimatic zones The aim of this book is to provide an up to date general view of this branch of geomorphology It includes a chapter on applied geomorphology for each morphoclimatic zone providing an approximation of the main environmental problems Geoscientists geomorphologists

Tropical Geomorphology, 1983 Landscapes and Geomorphology: A Very Short Introduction Andrew Goudie, Heather Viles, 2010-08-26 Examining what landscape is and how we use a range of ideas and techniques to study it Andrew Goudie and Heather Viles demonstrate how geomorphologists have built on classic methods pioneered by some great 19th century scientists to examine our Earth

The History of the Study of Landforms or the Development of Geomorphology, Volume 5 T.P. Burt, A.S. Goudie, H.A. Viles, 2022-10-20 Co published with British Society for Geomorphology This volume is the fifth in the definitive series The History of the Study of Landforms or the Development of Geomorphology Volume 1 1964 dealt with contributions to the field up to 1890 Volume 2 1973 with the concepts and contributions of William Morris Davis and Volume 3 1991 covered historical and regional themes during the classic period of geomorphology 1890 1950 Volume 4 2008 concentrated on studies of geomorphological processes and Quaternary geomorphology between 1890 and 1965 by the end of this period process based studies had become dominant Volume 5 builds on this platform covering in detail the revolutionary changes in approach that characterized the study of geomorphology in the second half of the twentieth century It is divided into three sections the first deals with changes in approach and method the second with changes in ideas and the broader scientific context within which geomorphology is studied and the final section details advances in research on processes and landforms The volume's objective is to describe and analyse many of the developments that provide a foundation for the rich and varied subject matter of twenty first century geomorphology

Fundamentals of Geomorphology Richard Huggett, 2013-07-04 This extensively revised and updated edition continues to present an engaging and comprehensive introduction to the subject exploring the world's landforms from a broad systems perspective It reflects on the latest developments in the field and includes new chapters on geomorphic materials and processes hillslopes and changing landscapes Fundamentals of Geomorphology is an engaging and comprehensive introduction Starting with a consideration of the nature of geomorphology and the geomorphic system geomorphic materials and processes and the quest

of process and historical geomorphologists it moves on to discuss structure landforms resulting from or influenced by the endogenic agencies of tectonic and volcanic processes geological structures and rock types process and form landforms resulting from or influenced by the exogenic agencies of weathering running water flowing ice and meltwater ground ice and frost the wind and the sea history earth surface history giving a discussion of Quaternary landforms and ancient landforms including the origin of old plains relict exhumed and stagnant landscape features and evolutionary aspects of landscape change Fundamentals of Geomorphology provides a stimulating and innovative perspective on the key topics and debates within the field of geomorphology Written in an accessible and lively manner it includes guides to further reading chapter summaries and an extensive glossary of key terms The book is also illustrated throughout with over 200 informative diagrams and attractive photographs including a colour plate section Geomorphological Landscapes of the World Piotr

Migon,2010-01-22 Physical landscapes are one of the most fascinating facets of our Planet which tell stories about the evolution of the surface of the Earth This book provides up to date information about the geomorphology of the selected classic sites from around the world and shows the variety of geomorphological landscapes as moulded by different sets of processes acting over different timescales from millions of years to days The volume is written by nearly fifty geomorphologists from more than twenty countries who for many years have researched some of the unique sceneries on the planet The thirty six chapters present each continent of the world They describe landscapes of different origin so that the reader can learn about the complexity of processes behind the sceneries This is a useful reference book linking geomorphology with global initiatives focused on nature conservation **Tropical Geomorphology** Michael Frank

Thomas,1974 Human Activities and the Tropical Rainforest Bernard K. Maloney,2013-11-11 Arising initially from a conference the papers published here have been integrated into book form to provide information on human activities and the tropical rainforest in the past and present and on the possible future of the rainforest in a unique way Other books have considered some but not all of these themes however none has stressed the continuity of change over time and its possible outcome for the people of the forest as well as for the forest itself Because of the approach taken this book should appeal across traditional disciplinary boundaries Indeed a prime aim has been to suggest that rainforest because of its complexity and the complexity of people rainforest relationships throughout time deserves study from a broad perspective This book poses more questions than answers about the rainforest and it is hoped that it will encourage readers to think about the rainforest in a wider way than hitherto This book is aimed at geographers physical and human social anthropologists archaeologists pedologists foresters and tropical botanists and will be of value to graduates of various disciplines setting out to research the rainforest Geomorphology Mateo Gutierrez,2012-12-07 This book provides a detailed coverage of the landforms of Planet Earth and the processes that shaped them The study of these morphologies some of which formed during past geological periods under environmental conditions very different from those of today makes it possible to reconstruct

the evolution of relief and to infer environmental changes that have involved geological media the climate or human activity A major advance of Geomorphology in recent decades is the development of techniques that make it possible to quantify morphogenetic processes and rates at which forms change under different environmental conditions The development of Geochronology or absolute dating methods is helping us correct the limitations of relative dating that have prevailed in Geomorphology for many years The ability to assign numerical ages to both landforms and deposits opens up multiple possibilities for reconstructing the evolution of relief making correlations calculating rates and estimating recurrence periods A theme of major concern facing people today is the possible warming of the planet due to the release of greenhouse gases into the environment Investigations conducted by the scientific community show that this temperature increase is at least partially anthropogenic Given this more than probable cause and effect relationship the most sensible and prudent path is to design and apply mitigation measures to alleviate this heating that can negatively affect both the natural environment and human society The information that Geomorphology can provide on the recent past Historical Geomorphology may be very useful in making predictions on the activity of these potentially dangerous processes in the future and on the possible effects of environmental changes The aim of this book is to provide a general vision of the multiple aspects of Geomorphology and to provide a methodological foundation to approach the study of various branches of geomorphology To this end the book contains a basic bibliography that can be used for future research In addition applied aspects of Geomorphology are covered at the end of each chapter to provide knowledge of the activities of geomorphologists in the professional world **Granite**

Landscapes of the World Piotr Migon, 2006-01-19 Outcrops of granitic rocks cover a large proportion of the Earth's surface and host a range of spectacular landforms and landscapes from extensive plains dotted by inselbergs to deeply dissected mountain ranges They are often strikingly beautiful but more importantly they provide valuable insights into the mechanisms of geomorphic evolution both in the past and at present The book offers a comprehensive view of the geomorphology of granite areas examining individual landforms and their assemblages Weathering processes and the phenomenon of deep weathering in particular are given much emphasis as these are fundamental to the understanding of the geomorphic evolution of granite areas Granite landforms directly related to weathering such as boulders tors inselbergs and features of surface microrelief are examined in respect to their characteristics and origin Patterns of slope evolution are shown in the context of both rock slopes and deeply weathered terrains Granite geomorphology in the coastal periglacial and glacial context is presented to show how the characteristics of granite control landform evolution in these specific environments In the closing part a variety of geological controls is reviewed and their primacy over other factors is advocated followed by an attempt to provide a typology of natural granite landscapes Finally certain specific ways of human transformation of granite landscapes are presented The book will be useful to a range of earth science disciplines including geomorphology igneous petrology engineering geology and soil science Cultural geographers and people dealing with conservation of geological

heritage should find it of interest Examples from all parts of the world and extensive referencing ensure that it will act as an up to date guidebook to the fascinating world of granite geomorphology *Humid Tropical Environments* Alison Reading, Andrew C. Millington, Russell D. Thompson, 1995-10-30 The humid tropics contain some of the world s richest most diverse most important and most threatened environments This book draws on recent work by geographers biologists ecologists geologists and climatologists to present a complete and integrated appraisal of the natural environment of all the humid tropical regions of the world The most complete textbook on this key subject Fully illustrated throughout with photographs and diagrams Informative case studies and examples Considers the physical environment as a whole and stresses the link between the elements
