works of this character to give a faithful literal translation of the author's statements to give these in a manner which will interest the reader and to preserve so far as is possible the style of the original text. The task has been doubly difficult in this work because in using Latin the author availed himself of a medium which had ceased to expand a thousand years before his subject had in many particulars come into being in consequence he was in difficulties with a large number of ideas for which there were no corresponding words in the vocabulary at his command and instead of adopting into the text his native German terms he coined several hundred Latin expressions to answer his needs. It is upon this rock that most former attempts at translation have been wrecked. Except for a very small number we believe we have been able to discover the intended meaning of such expressions from a study of the context assisted by a very incomplete glossary prepared by the author himself and by an exhaustive investigation into the literature of these subjects during the sixteenth and seventeenth centuries. That discovery in this particular has been only gradual and obtained after much labour may be indicated by the fact that the entire text has been re-typewritten three times since the original and some parts more often and further that the printer's proof has been thrice revised. We have found some English equivalents more or less satisfactory for practically all such terms except those of weights, the varieties of veins and a few minerals. In the matter of weights we have introduced the original Latin because it is impossible to give true equivalents and avoid the fractions of reduction and further as explained in the Appendix on Weights it is impossible to say in many cases what scale the Author had in mind. The English nomenclature to be adopted has given great difficulty for various reasons among them that many methods and processes described have never been practised in English speaking mining communities and so had no representatives in our vocabulary and we considered the introduction of German terms undesirable. Other methods and processes have become obsolete and their descriptive terms with them yet we wished to avoid the introduction of obsolete or unusual English but of the greatest importance of all has been the necessity to avoid rigorously such modern technical terms as would imply a greater scientific understanding than the period possessed. Agricola's Latin while mostly free from mediaeval corruption is somewhat tainted with German construction.
