## **Geotektonische Forschungen 94:**

*Deformation Mechanisms, Rheology and Tectonics* Siese de Meer, 2002 The motion and deformation of rocks are processes of fundamental importance in shaping the Earth from outer crustal layers to the deep mantle Reconstructions of the evolution of the Earth therefore require detailed knowledge of the geometry of deformation structures and their relative timing of the motions leading to deformation structures and of the mechanisms governing these motions This volume contains a collection of 22 papers on field experimental and theoretical studies that add to our knowledge of these processes

*Orogenic Processes* Wolfgang Franke (géologue).), 2000      **Geotektonische Forschungen** , 1970

Hatcher, 2007 This book contains landmark papers on the processes of formation of continental crust from its beginnings in the Archean to modern processes as well as discussions of several ancient and modern orogenic belts The book is international in scope with contributions from geoscientists dealing with crustal processes on five continents and articles from more than 50 non U S authors and co authors Publisher s website

Lardeaux,V. Janousek,G. Oggiano ,2014-07-28 This volume summarizes the state of the art of Variscan geology from Iberia to  
the Bohemian Massif The European Variscan belt consists of two orogens the older northern and the younger southern The  
northern Variscan realm was dominated by Late Devonian Carboniferous rifting subduction and collisional events as defined  
by sedimentary records crustal growth recycling of continental crust and large scale deformations In contrast the southern  
European crust was reworked by major Late Carboniferous collision followed by Permian wrenching The Late Carboniferous  
Permian orogeny overprinted the previously accreted system in the north but with much lower intensity resulting in  
magmatic recycling and extensional tectonics These two main orogenic cycles do not reflect episodic evolution of a single  
orogenic system but a complete change in orientation of stress field thermal regime degree of reworking and recycling of  
European crust reflecting a major switch in plate configurations at the Early Late Carboniferous boundary      **Geophysical**
