Wellington Sears Handbook of Industrial Textiles Sabit Adanur, 2017-11-22 The Wellington Sears Handbook of Industrial Textiles has been a widely used textile industry reference for more than 50 years Now a completely updated new edition has been published It was prepared by a team of industrial textile specialists at Auburn University to provide both technical and management personnel with a comprehensive resource on the current

technology and applications of today's industrial textiles. All aspects of industrial textiles are covered: man-made and natural materials, manufacturing and finishing methods, and all applications. There are also sections on properties, testing, waste management, computers and automation, standards and regulations. The appendices provide extensive reference data, properties, specifications, manufacturers and trade names, mathematical equations, and measurement units. The text is organized for easy reference and well illustrated with hundreds of schematics and photographs.

Landfill Closures R.M. Koerner, 2013-10-22. It is toward investigating, discussing, and presenting the various issues involved in solid waste closure that this book is focused. It consists of invited papers presented at the 4th Annual Geosynthetic Research Institute Seminar. The closure capping of completed or abandoned solid waste facilities presents particular challenges; for example, there usually exists a very uncertain and random subsidence behaviour of the existing waste beneath the closure, the friction behaviour of the various interfaces that are involved in solid waste facilities is not established, there are numerous long-term geosynthetic stability and durability issues that must be addressed, and there are an extremely large number of sites that require proper closure. These topics are addressed in the three sessions: Geosynthetics in Landfill Closures, Interface Friction Considerations, and Geocomposites Systems and New Materials. Current materials and basic techniques are reviewed, and innovations discussed. Owners' perspectives and design considerations raised, and specific problems such as liquid intrusion are addressed. The area of landfill closure simply begs innovation, and the manufacturing sector is meeting the challenge. This gathering of expert opinions is an important document of the proper use of geosynthetics in landfill closure systems.
