## **Germ Cell Development Division Disruption And Death:**

**Germ Cell Development, Division, Disruption and Death** Barry R. Zirkin, 2012-12-06 An exploration of germ cell development division disruption and death designed for reproductive endocrinologists microbiologists and physiologists Topics covered include cloning and characterization of genes expressed in germ cell lines spermatological transplantation and testicular ageing

**Male Reproductive Function** Christina Wang, 2007-05-28 Male Reproductive Function gives an up to date review on the physiology and disease processes associated with the male reproductive system The first few chapters describe the regulation of the functions of the testis and the integration of its components germ cells Sertoli cells and Leydig cells This is followed by a description of puberty and aging and the disorders or dysfunction that may be associated with these physiological processes Discussions on the current methods for the diagnosis and treatment of male hypogonadism male infertility and male sexual dysfunction follow with detailed descriptions of types of androgen replacement and the benefits and risks of such treatment The book concludes with the development of male contraception and the possible influence of the environment on the male reproductive system Male Reproductive Function represents a conglomeration of the efforts of experts in andrology from all over the world both in basic cellular molecular biology as well as in clinical science and practice This book is suitable for endocrinologists urologists general internists gynecologists and other students in the field of male reproduction

Male Sterility and Motility Disorders Samir Hamamah, Roger Mieusset, Francois Olivennes, Rene Frydman, 2012-12-06 This conference dedicated to the etiology and treatment of motility disorders in spermatozoa and male sterility attracted some of the finest investigators in the field Standards were immensely high throughout and discussions were meaningful and detailed Analyses on disorders in sperm motility demand a broad based approach involving cytologists geneticists andrologists and embryologists because the topic has many clinical and scientific overtones Human spermatozoa are at the mercy of so many factors as they form and mature in the testis and epididymis Their survival and fundamental characteristics are essential for fertilization and the male genome imposes its influence on the embryo as it becomes active in male pronuclei very soon after sperm entry into the oocyte All of these fundamental aspects of sperm biology demanded a broad breadth of topics in the symposium The opening session quickly got down to fundamentals with contributions from J L Gatti J G Alvarez C Gagnon and H Breitbart They discussed the mechanism and regulation of motility the metabolic strategy of human spermatozoa the effects of exogenous factors such as antibodies infections and toxins and finally the role of intracellular calcium on sperm motility To these topics the postcoffee session on the first morning described the genetics of motility disorders and the etiology and management of necrozoospermia The excellent presentation provided the background detail of the symposium and opened the way for the discussion of various clinical aspects of the topic

Testicular Tangrams F.F.G. Rommerts, K.J. Teerds, 2013-06-29 During the past two decades research on the testis has created a vast number of publications New techniques such as cell and gene cloning germ cell

manipulation and transplantation as well as gene expression have surpassed the classical approaches that involved studies on receptor activation and endocrine paracrine and autocrine regulatory mechanisms. Due to the expansion of this field of research it has become increasingly difficult to integrate the large number of observations and relate them to the physiology and pathophysiology of the testis. More emphasis must therefore be put on the integration of isolated findings and the construction of the total picture. In order to stimulate this specific mental activity we have named this book Testicular Tangram. We hope that the chapters in this book will be used as pieces of the testicular puzzle and that the reader enjoys composing new shapes. The chapters of this book are representative of the plenary lectures presented at the 11th European Workshop on Molecular and Cellular Endocrinology of the Testis held in Doorwerth, The Netherlands from April 6-10, 2002. Publication of this book has been made possible by the generous support of the Ernst Schering Research Foundation. We would also like to thank the distinguished scientists who have provided us with their excellent manuscripts well before the start of the Workshop. We acknowledge the help of Dr. U. F. Habenicht, Dr. M. **Sex-Steroid Interactions with Growth Hormone** Johannes D. Veldhuis, Andrea Giustina, 2012-12-06. Sex Steroid Interactions with Growth Hormone presents the proceedings of an international symposium held from October 22-25 in Naples, Florida. The proceedings provide new insights and concepts gained by molecular, cellular, and neuroendocrine research into mechanistic interactions of the reproductive and somatotrophic axes. Chapters include discussions of the impact of sex steroids on growth hormone secretion in both children and adults; sex steroids, growth hormone releasing factor, and somatostatin; how sex steroids modulate growth hormone action on target tissues; and differential effects of growth hormone secretagogues in men and women. This volume is designed for physicians, scientists, and other health professionals interested or trained in clinical and basic endocrinology, growth, or reproduction. **Male Fertility and Infertility** T. D. Glover, C. L. R. Barratt, 2009-03-19. This contemporary account of male fertility provides a much needed bridge between those seeking to understand the subject from an evolutionary and biological perspective and those with clinical responsibility for the investigation and treatment of infertility. Accordingly, the first half of the book deals with the evolutionary aspects of male reproduction and sperm competition, sperm production and delivery in man and other animals, spermatogenesis, and epididymal function, sperm transport in the female tract, and the apparent decline in human sperm count. The second part of the book puts greater emphasis on clinical problems and opens with a discussion of intracytoplasmic sperm injection, its value and limitations. This is followed by a review of modern developments in the genetics of male fertility and proceeds to a further chapter on the role of surgical procedures used in the treatment. Semen analysis is critically reviewed and the molecular techniques now being used in preimplantation diagnosis and in the study of mitochondrial inheritance are fully described. Taken together, these chapters, written by an international team of authors, illustrate the breadth of vision needed to tackle the problem of male fertility. *Hormones, Brain and Behavior Online*, 2002-06-18. *Hormones, Brain and Behavior*, Second Edition is a comprehensive work discussing the

effect of hormones on the brain and subsequently behavior This major reference work has 109 chapters covering a broad range of topics with an extensive discussion of the effects of hormones on insects fish amphibians birds rodents and humans To truly understand all aspects of our behavior we must take every influence including the hormonal influences into consideration Donald Pfaff and a number of well qualified editors examine and discuss how we are influenced by hormonal factors offering insight and information on the lives of a variety of species Hormones Brain and Behavior offers the reader comprehensive coverage of growing field of research with a state of the art overview of hormonally mediated behaviors This reference provides unique treatment of all major vertebrate and invertebrate model systems with excellent opportunities for relating behavior to molecular genetics The topics cover an unusual breadth from molecules to ecophysiology ranging from basic science to clinical research making this reference of interest to a broad range of scientists in a variety of fields Available online exclusively via ScienceDirect A limited edition print version is also available Comprehensive coverage of a growing field of research Unique treatment of all major vertebrate and invertebrate model systems with excellent opportunities for relating behavior to molecular genetics Covers an unusual breadth ranging from molecules to ecophysiology and from basic science to clinical research

**ART and the Human Blastocyst** David K. Gardner, Michelle Lane, 2001 The continued debate regarding the stage at which the human embryo conceived in the laboratory should be placed in the mother combined with recent developments in culture media formulations have brought the role of the human blastocyst in ART back into the spotlight ART and the Human Blastocyst presents the proceedings of the International Symposium on ART and the Human Blastocyst held from March 30 April 2 2000 in Dana Point California This book brings to the forefront the main issues raised with the transfer of embryos at the blastocyst stage including the reduction of high order multiple gestations and the role of the blastocyst culture and transfer in facilitating successful single embryo transfer Sections include gamete quality and pregnancy outcome physiology of the embryo blastocyst development in culture blastocyst transfer and fate and implantation More than 40 illustrations and 25 tables complement the text

*Therapeutic Outcome of Endocrine Disorders* Brian Stabler, Barry B. Bercu, 2000 Changes in the allocation of healthcare resources have raised issues related to the efficacy and outcomes of medical therapy and how such factors may be measured The questions associated with the quality of life and functional capability of patients with chronic health conditions have been of special interest Endocrine disorders have the potential for disrupting the general health and well being of affected individuals and their families thus they warrant serious attention This symposium was convened in November 1997 at Palm Beach Gardens Florida to bring together medical behavioral and social scientists The meeting fostered the presentation and discussion of the most current clinical research on the effects of various therapies on a wide range of endocrine disorders from diabetes to adrenal insufficiency and growth hormone deficiency The participants all noted national and international experts in their fields focused their attention on both the biomedical value and effectiveness of treatment as well as on the impact such treatments have on psychological

states such as mood and cognition Many presentations specifically emphasized the quality of life QOL indicators that now regularly appear in many research protocols and reports The pioneering work of two clinical researchers was a major highlight of the meeting and an Award of Recognition was presented to Robert Blizzard M D and John Money Ph D for their innovative and insightful work in pediatric endocrinology and psychosexual development *Cell Lineage and Embryo Patterning*, 2000-12-13 International Review of Cytology presents current advances and comprehensive reviews in cell biology both plant and animal Articles address structure and control of gene expression nucleocytoplasmic interactions control of cell development and differentiation and cell transformation and growth Authored by some of the foremost scientists in the field each volume provides up to date information and directions for future research This volume brings together current information on the localization and roles of RNAs in cell lineage determination and subsequent patterning in embryonic development Guest co editor Lawrence Etkin is one of the leading researchers in molecular genetics of *Xenopus* Key Features A number of important concepts are discussed including How polarity is established during oogenesis How germ cell determinants become organized in the establishment of the germ cell lineage Different strategies used by organisms to establish the germ cell lineage Similarities and differences between the mechanisms used in embryonic patterning The mechanisms and machinery by which molecules such as RNA become asymmetrically segregated The use of similar signaling pathways in patterning of the dorsal ventral and right left asymmetries embryonic germ layers limb and nervous system The link between fundamental biological processes such as RNA translation and localization in the regulation of axis specification **Embryo Implantation** Daniel D. Carson, 1999-09-24 This volume contains the proceedings of the International Symposium on Embryo Implantation Molecular Cellular and Clinical Aspects held from October 3-6 1997 in Newport Beach California Internationally recognized experts discuss the development and future of human in vitro fertilization and embryo implantation the cellular aspects of implantation hormonal regulation molecular markers of receptivity trophoblast factors primate models and animal studies and transcriptional regulation of maternal fetal recognition

Capybara José Roberto Moreira, Katia Maria P.M.B. Ferraz, Emilio A. Herrera, David W. Macdonald, 2012-08-16 The capybara is the neotropical mammal with the highest potential for production and domestication Amongst the favorable characteristics for domestication we can list its high prolificacy rapid growth rate a herbivorous diet social behavior and relative tameness The genus with only two species is found from the Panama Canal to the north of Argentina on the east of the Andes Chile is the only country in South America where the capybara is not found The species is eaten all over its range especially by poor rural and traditional communities engaged in subsistence hunting On the other hand in large urban settlements wildlife is consumed by city dwellers as a delicacy The sustainable management of capybara in the wild has been adopted by some South American countries while others have encouraged capybara rearing in captivity *Hormones, Brain and Behavior*, 2002-06-18 Hormones Brain and Behavior Third Edition offers a state of the art overview of hormonally

mediated behaviors including an extensive discussion of the effects of hormones on insects fish amphibians birds rodents and humans Entries have been carefully designed to provide a valuable source of information for students and researchers in neuroendocrinology and those working in related areas such as biology psychology psychiatry and neurology This third edition has been substantially restructured to include both foundational information and recent developments in the field Continuing the emphasis on interdisciplinary research and practical applications the book includes articles aligned in five main subject sections with new chapters included on genetic and genomic techniques and clinical investigations This reference provides unique treatment of all major vertebrate and invertebrate model systems with excellent opportunities for relating behavior to molecular genetics The topics cover an unusual breadth from molecules to ecophysiology ranging from basic science to clinical research making this reference of interest to a broad range of scientists in a variety of fields Contributors from 16 different countries and more than 70 institutions Unlike any other hormone reference on the market *Hormones Brain and Behavior* addresses hormone effects in all major vertebrate and non vertebrate models A timely current reference on an emerging field with each chapter providing an in depth exploration of the topic Discusses molecular aspects of hormone function systems development and hormone related diseases Addresses hormone effects in both the developing and adult nervous system Topics include Mammalian and Non mammalian Hormone behavior Systems Cellular and Molecular Mechanisms of Hormone Actions on Behavior Development of Hormone dependent Neuronal Systems Hormone Behavior Relations of Clinical Importance      Ovulation Eli Y. Adashi, 2013-11-11 *Ovulation Evolving Scientific and Clinical Concepts* presents the proceedings of the International Symposium on Ovulation Evolving Scientific and Clinical Concepts held in Salt Lake City Utah Internationally recognized experts provide new insights in the most recent developments in the area of mammalian ovulation incorporating basic scientific and clinical concepts in the process Topics include an overview of 37 years of research on ovulation the follicle the gonadotropin surge the intraovarian steroid microenvironment putative periovulatory intraovarian regulators and messengers and clinical frontiers More than 80 illustrations round out the text The book is essential for all reproductive endocrinologists and Ob Gyns      *Comprehensive Toxicology*, 2017-12-01 *Comprehensive Toxicology Third Edition Fifteen Volume Set* discusses chemical effects on biological systems with a focus on understanding the mechanisms by which chemicals induce adverse health effects Organized by organ system this comprehensive reference work addresses the toxicological effects of chemicals on the immune system the hematopoietic system cardiovascular system respiratory system hepatic toxicology renal toxicology gastrointestinal toxicology reproductive and endocrine toxicology neuro and behavioral toxicology developmental toxicology and carcinogenesis also including critical sections that cover the general principles of toxicology cellular and molecular toxicology biotransformation and toxicology testing and evaluation Each section is examined in state of the art chapters written by domain experts providing key information to support the investigations of researchers across the medical veterinary food environment and chemical

research industries and national and international regulatory agencies Thoroughly revised and expanded to 15 volumes that include the latest advances in research and uniquely organized by organ system for ease of reference and diagnosis this new edition is an essential reference for researchers of toxicology Organized to cover both the fundamental principles of toxicology and unique aspects of major organ systems Thoroughly revised to include the latest advances in the toxicological effects of chemicals on the immune system Features additional coverage throughout and a new volume on toxicology of the hematopoietic system Presents in depth comprehensive coverage from an international author base of domain experts
