From early zeppelins to the Luftwaffe and the Enola Gay to the unmanned aerial vehicles of today air power has long been regarded as an invaluable instrument of war. However, nations have employed aircraft for many other purposes as well; they provide security and surveillance and they are vital to myriad diplomatic and humanitarian efforts. Air power has become a means for statesmen to advance a variety of goals, opening up new possibilities and problems in times of peace as well as war.

The Influence of Air Power upon History examines the many ways in which aviation technology has impacted policymaking since 1903. It analyzes air strategy in nations around the world and explores how a country's presumed technological capability or lack thereof has become a crucial aspect of diplomacy. Together, the essays in this insightful volume offer a greater understanding of the history of military force and diplomatic relations in the global community. [Air Power History](#)

The 20th century saw air power transformed from novelists' fantasy into stark reality. From string and canvas to precision weaponry and stealth, air power has progressed to become not only the weapon of first political choice but often the only conceivable option. This rapid development has given rise to considerable debate and controversy, with those holding entrenched views rarely slow to shout their case. Many myths have grown over the period, ranging from the once much vaunted ability of air power to win wars alone through to its impact as a coercive tool. This volume examines the theory and practice of air power from its earliest inception. The contributors have been drawn from academia and the military and represent some of the world's leading proponents on the subject. All significant eras of air power employment are examined; some are evidently turning points, while others represent continuous development. Perhaps more importantly, the book highlights the areas that could be considered to be significant and invites the reader to enter the debate as to whether it constitutes a continuum, a turning point, or indeed a revolution.

The Development of the German Air Force, 1919-1939 Prof. Richard Suchenwirth, 2017-06-28

The Development of the German Air Force 1919 to 1939, first published in 1968, written by Professor Richard Suchenwirth and revised and edited by Mr. Harry R. Fletcher, is one of a series of historical studies written for the United States Air Force Historical Division by men who had been key officers in or outstanding authorities on the German Air Force during World War II. The overall purpose of the series is twofold: 1. To provide the United States Air Force with a comprehensive and insofar as possible authoritative history of a major air force which suffered defeat in World War II; a history prepared by many of the principal and responsible leaders of that air force. 2. To provide a firsthand account of that air force's unique combat in a major war, especially its fight against the forces of the Soviet Union. This series of studies therefore covers in large part virtually all phases of the Luftwaffe's operations and organization from its camouflaged origin in the Reichswehr during the period of secret rearmament following World War I through its participation in the Spanish Civil War and its massive operations and

final defeat in World War II with particular attention to the air war on the Eastern Front

German Air Force Airlift Operations Generalmajor a. D. Fritz Morzik, 2017-06-28 Germany's imaginative employment of transport aircraft in World War II produced as many innovations as Germany's use of tanks Indeed like the tank the transport aircraft was closely associated with the Blitzkrieg concept This relationship was advantageous at the outset of the war but it became dangerous as the war dragged on and German armies outran their surface supply lines in North Africa and Russia Then ground commanders began to think of air transport as the means of supply The history of this trend is one of the main themes of this study which was first published in its English translation in 1961 Some of the questions embodied in this theme How much air transport is enough Under what conditions is an air supply operation feasible What are the prerequisites for a successful airlift to encircled ground forces What are the advantages and limitations of the glider are as vital and controversial today as they were during World War II Generalmajor a. D. Fritz Morzik who began his military career as a non commissioned officer in the German Air Service in World War I and ended it as Armed Forces Chief of Air Transport in World War II is especially well qualified to write the

present study His long career spanning two world wars and his experience with both civilian and military transport aircraft testify to the breadth of his practical knowledge The Effectiveness of Airpower in the 20th Century John F. O'Connell, John O'Connell, 2007-04 This volume takes a look at the military airpower functions that emerged during World War I and then examines the development of airpower doctrine in seven nations that developed major military air arms during and after the first World War They are France Germany Great Britain Italy Japan the Union of Soviet Socialist States USSR and the United States of America The text also reviews the use of military airpower in conflicts that took place between the two world wars Page xi **Command and Leadership in the German Air Force** Prof. Richard Suchenwirth, 2017-07-11 Command and Leadership in the German Air Force first published in 1969 written by Professor Richard Suchenwirth and revised and edited by Mr Harry R Fletcher is one of a series of historical studies written for the United States Air Force Historical Division by men who had been key officers in or outstanding authorities on the German Air Force during World War II The overall purpose of the series is twofold 1 To provide the United States Air Force with a comprehensive and insofar as possible authoritative history of a major air force which suffered defeat in World War II a history prepared by many of the principal and responsible leaders of that air force 2 to provide a firsthand account of that air force s unique combat in a major war especially its fight against the forces of the Soviet Union This series of studies therefore covers in large part virtually all phases of the Luftwaffe s operations and organization from its camouflaged origin in the Reichswehr during the period of secret rearmament following World War I through its participation in the Spanish Civil War and its massive operations and final defeat in World War II with particular attention to the air war on the Eastern Front These studies find their principal authority in the personal knowledge and experience of their authors
