*Studies in Tectonic Culture* Kenneth Frampton,2001-08-24 Composed of ten essays and an epilogue that trace the history of contemporary form as an evolving poetic of structure and construction the book s analytical framework rests on Frampton s close readings of key French and German and English sources from the eighteenth century to the present Kenneth Frampton s long awaited follow up to his classic A Critical History of Modern Architecture is certain to influence any future debate on the evolution of modern architecture Studies in Tectonic Culture is nothing less than a rethinking of the entire modern architectural tradition The notion of tectonics as employed by Frampton the focus on architecture as a constructional craft constitutes a direct challenge to current mainstream thinking on the artistic limits of postmodernism and suggests a convincing alternative Indeed Frampton argues modern architecture is invariably as much about structure and construction as it is about space and abstract form Composed of ten essays and an epilogue that trace the history of contemporary form as an evolving poetic of

structure and construction the book's analytical framework rests on Frampton's close readings of key French and German and English sources from the eighteenth century to the present. He clarifies the various turns that structural engineering and tectonic imagination have taken in the work of such architects as Perret, Wright, Kahn, Scarpa, and Mies and shows how both constructional form and material character were integral to an evolving architectural expression of their work. Frampton also demonstrates that the way in which these elements are articulated from one work to the next provides a basis upon which to evaluate the works as a whole. This is especially evident in his consideration of the work of Perret, Mies, and Kahn and the continuities in their thought and attitudes that linked them to the past. Frampton considers the conscious cultivation of the tectonic tradition in architecture as an essential element in the future development of architectural form, casting a critical new light on the entire issue of modernity and on the place of much work that has passed as avant garde. *The Architecture of Evolution* Marco Tamborini, 2022-12-20 In the final decades of the twentieth century the advent of evolutionary developmental biology (evo devo) offered a revolutionary new perspective that transformed the classical neo-Darwinian gene-centered study of evolution. In *The Architecture of Evolution* Marco Tamborini demonstrates how this radical innovation was made possible by the largely forgotten study of morphology. Despite the key role morphology played in the development of evolutionary biology since the 1940s, the architecture of organisms was excluded from the Modern Evolutionary Synthesis. And yet from the beginning of the twentieth century to the 1970s and 80s, morphologists sought to understand how organisms were built and how organismal forms could be generated and controlled. The generation of organic form was they believed essential to understanding the mechanisms of evolution. Tamborini explores how the development of evo devo and the recent organismal turn in biology involved not only the work of morphologists but those outside the biological community with whom they exchanged their data, knowledge, and practices. Together with architects and engineers they worked to establish a mathematical and theoretical basis for the study of organic form as a mode of construction, developing and reinterpreting important notions that would play a central role in the development of evolutionary developmental biology in the late 1980s. This book sheds light not only on the interdisciplinary basis for many of the key concepts in current developmental biology but also on contributions to the study of organic form outside the English-speaking world.
