both events which maintains the high submission standard of last year. Of these 335 were submitted to ECML only 220 to PKDD only and 30 to both. Such a high volume of scientific work required a tremendous effort from Area Chairs Program Committee members and some additional reviewers. On average PC members had 10 papers to evaluate and Area Chairs had 25 papers to decide upon. We managed to have 3 highly qualified independent reviews per paper with very few exceptions and one additional overall input from one of the Area Chairs. After the authors' responses and the online discussions for many of the papers we arrived at the final selection of 40 regular papers for ECML and 35 for PKDD. Besides these 32 others were accepted as short papers for ECML and 35 for PKDD. This represents a joint acceptance rate of around 13% for regular papers and 25% overall. We thank all involved for all the effort with reviewing and selection of papers. Besides the core technical program ECML and PKDD had 6 invited speakers, 10 workshops, 8 tutorials and a Knowledge Discovery Challenge.

Advances in Peptide and Peptidomimetic Design Inspiring Basic Science and Drug Discovery Henry I. Mosberg, Carrie Haskell-Luevano, Tomi K. Drug Discovery and Evaluation: Methods in Clinical Pharmacology H. Gerhard Vogel, Jochen Maas, Alexander Gebauer, 2010-12-15. Drug Discovery and Evaluation has become a more and more difficult, expensive and time-consuming process. The effect of a new compound has to be detected by in vitro and in vivo methods of pharmacology. The activity spectrum and the potency compared to existing drugs have to be determined. As these processes can be divided up stepwise, we have designed a book series *Drug Discovery and Evaluation* in the form of a recommendation document. The methods to detect drug targets are described in the first volume of this series *Pharmacological Assays*, comprising classical methods as well as new technologies. Before going to man, the most suitable compound has to be selected by pharmacokinetic studies and experiments in toxicology. These preclinical methods are described in the second volume *Safety and Pharmacokinetic Assays*. Only then are first studies in human beings allowed. Special rules are established for Phase I studies. Clinical pharmacokinetics are performed in parallel with human studies on tolerability and therapeutic effects. Special studies according to various populations and different therapeutic indications are necessary. These items are covered in the third volume *Methods in Clinical Pharmacology*.

Lead Generation Approaches in Drug Discovery Zoran Rankovic, Richard Morphy, 2010-04-07. An integrated overview of modern approaches to lead discovery. Lead generation is increasingly seen as a distinct and successful determining phase of the drug discovery process. Over recent years there have been major advances in the understanding of what constitutes a good lead compound and how to improve the chances of finding such a compound. Written by leading scientists and established opinion leaders from industry and academia, this book provides an authoritative overview of the

field as well as the theory practice and scope of the principal Lead Generation Approaches in Drug Discovery including The evolution of the lead discovery process key concepts current challenges and future directions Strategies and technologies driving the high throughput screening HTS approach to lead discovery including the shifting paradigms in the design of compound collections and best practice in the hit confirmation process Knowledge based in silico or virtual screening Theory and practice of the fragment based approach to lead discovery The opportunities and challenges presented by multi target drug discovery MTDD De novo design of lead compounds and new approaches to estimating the synthetic accessibility of de novo designed molecules The impact of natural products on drug discovery and potential of natural product like compounds for exploring regions of biologically relevant chemical space Using early screening of hits and leads for metabolic pharmacokinetic and toxicological liabilities to reduce attrition during the later phases of drug discovery The utility of parallel synthesis and purification in lead discovery With each topic supported by numerous case studies this is indispensable reading for researchers in industry and academia who wish to keep up to date with the latest strategies and approaches in drug discovery
