challenges of a critical thinking course effectively explaining the nature of validity assessing deductive arguments reconstructing identifying and diagramming arguments and causal and probabilistic inference Additionally they discuss in detail important frequently neglected topics including testimony the nature and credibility of science rhetoric and dialectical argumentation Key Features and Benefits Uses contemporary psychological explanations of and remedies for pervasive errors in belief formation There is no other critical thinking text that generally applies this psychological approach Assesses premises notably premises based on the testimony of others and evaluation of news and other information sources No other critical thinking textbook gives detailed treatment of this crucial topic Typically they only provide a few remarks about when to accept expert opinion argument from authority Carefully explains the concept of validity paying particular attention in distinguishing logical possibility from other species of possibility and demonstrates how we may mistakenly judge invalid arguments as valid because of belief bias Instead of assessing an argument's validity using formal mathematical methods i.e. truth tables for propositional logic and Venn diagrams for categorical logic provides one technique that is generally applicable explicitly showing that it is impossible to make the conclusion false and the premises true together For instructors who like the more formal approach the text also includes standard treatments using truth tables and Venn diagrams Uses frequency trees and the frequency approach to probability more generally a simple method for understanding and evaluating quite complex probabilistic information Uses arguments maps which have been shown to significantly improve students reasoning and argument evaluation

Logic Puzzles Norman D. Willis, 2008-06 Have fun while you expand your powers of deductive reasoning Every one of these puzzles calls for conclusions based only on the information provided the answers don't depend on previous knowledge memory wordplay or deception just a logical mind Accept the alternatives that lead to the correct response and discard all faulty assumptions until you've arrived at the only possibility that makes sense There are eight kinds of puzzles and in most cases diagrams help organize your results Here's one example A supermarket theft has occurred Someone took a fully loaded cart without paying for the groceries One of the three suspects is guilty but which one The guilty party's statement is true the other two are false Who is guilty A B took the cart loaded with groceries B A's statement is true C A's statement is false Answer C is the guilty party

Judgment and Salvation Dustin G. Burlet,2022-11-03 This book contends the text of the Noachian deluge narrative categorically underscores all God did to preserve life in spite of the disaster Despite the picture of devastation that the narrative depicts the prominent emphasis of the text is on deliverance and redemption i e salvation not judgment The focus of the Genesis flood is acutely bent towards God s salvific rather than punitive purposes The arc of salvation within the flood narrative can be broken down into two main ideas Firstly God s intention for creation is not thwarted and secondly God commits himself to his intentions of creation God s intention for creation can be stated thus the establishment of order via covenant showing the sanctity of human life and the upholding of all life This involves in particular humanity as his image bearers including the lex talionis life for life principle
