Population Policy and Reproduction in Singapore Shirley Hsiao-Li Sun, 2012 This book examines the relationship between population policies and individual reproductive decisions in low fertility contexts Using the case study of Singapore it demonstrates that the effectiveness of population policy is a function of competing notions of citizenship and the gap between seemingly neutral policy incentives and the perceived and experienced disparate effects Drawing on a substantial number of personal interviews and focus groups the book analyzes the developmental welfare state s overarching emphasis of citizen responsibility and examines population policies that reinforce social inequalities and ignore cultural diversity These factors combine to undermine elaborate state policy efforts in encouraging citizens biological reproduction The book goes on to argue that in order to facilitate positive fertility decisions the state needs to modify the economic production at all cost approach and pay much more attention to the importance of social rights This suggests that the Singapore government might profitably approach the phenomenon of very low fertility with major initiatives similar to those of other advanced industrialized societies This book offers a significant contribution to the literature on social policy East Asian and Southeast Asian studies **International Bibliography of Sociology** Compiled by the British Library of Political and Economic Science, 2002-12 IBSS is the essential tool for librarians university departments research institutions and any public or private institution whose work requires access to up-to-date and comprehensive knowledge on the social sciences Urban Crisis M.
