Flare Star:

Flare Stars G. A. Gurzadyan, 2013-10-22 Flare Stars covers the significant progress in photoelectric photographic and spectral observations of flare stars Flare star is a variable star that can undergo unpredictable dramatic increases in brightness for a few minutes believed to be due to extremely intense flares This book is composed of 16 chapters and begins with an overview of flare stars and the hypothesis of infrared photon transformation The succeeding chapters deal with the inverse Compton Effect X ray radiation and the theory of the transition radiation and its importance to the T Tauri type stars and peculiar objects These topics are followed by analysis of the photometric and colorimetric flare data based on the fast electron hypothesis Other chapters consider the theory of the chromophore of flare stars and the general laws for the behavior of flare stars in stellar association and for T Tauri type stars The remaining chapters explore the observational data that have shed light on the problems of radio emission and flare dynamics These chapters also describe the great cosmogonic importance of stellar flares particularly for understanding the nature and the true character of energy sources within the stars This book will be of great value to astronomers and researchers Flare Stars in Star Clusters, Associations, and the Solar Vicinity International Astronomical Union. Symposium, 1990-06-30 Some 70 papers present the flare star problem from both a physical and evolutionary aspect and represent an interaction between investigators working on flare stars in clusters and associations and those working on the UV Ceti stars in solar vicinity The variety of perspectives reveal a physical similarity among several non stable phenomena and suggest that the different manifestations of stellar activity result from the release of some unknown kind of energy in the outer layers of young stars The papers deal not only with different aspects of flare stars but also with such related objects as T Tauri stars flares and Herbig Haro objects Annotation copyrighted by Book News Inc Portland OR **Variable Stars and Stellar Evolution** Vicki E. Hofmann, D. Krahn, V. R. Matas, L. D. Schmadel, G. Zech, 2013-12-14 From the reviews Astronomy and Astrophysics Abstracts has appeared in semi annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world Space Science Reviews 1 Dividing the whole field plus related subjects into 108 categories each work is numbered and most are accompanied by brief abstracts Fairly comprehensive cross referencing links relevant papers to more than one category and exhaustive author and subject indices are to be found at the back making the catalogues easy to use The series appears to be so complete in its coverage and

always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes
The Observatory Magazine 1 **Solar-Type Activity in Main-Sequence Stars** Roald E. Gershberg,2005-11-13

The first comprehensive monograph on this active and productive field of research investigates solar type activity amongst the large spectrum of low and middle mass main sequence stars and presents the subject in a systematic and comprehensive fashion

Extreme Stars James B. Kaler,2001-03-22 Over the past 200 years our knowledge of stars has expanded enormously From seeing myriad dots of different brightnesses we moved on to measure distances temperatures sizes chemical compositions even ages finding stars that dwarf our Sun and are dwarfed by it some in their youth others ancient First published in 2001 Extreme Stars describes the lives of stars from a fascinating perspective It examines their amazing extremes and results in an engaging overview of stellar evolution suitable for anyone interested in viewing or studying stars Ten chapters generously illustrated throughout explain the natures of the brightest the largest the hottest the youngest and so on ending with a selection of the strangest stars the Universe has to offer Taken as a whole the chapters show how stars develop and die and how each extreme turns into another under the inexorable twin forces of time and gravity

Cataclysmic Cosmic Events and How to Observe Them Martin Mobberley,2009-03-01 In the Victorian era or for non British readers the mid to late nineteenth century amateur astronomy tended to center on Solar System objects The Moon and planets as well as bright comets were the key objects of interest The brighter variable stars were monitored but photography was in its infancy and digital imaging lay a century in the future Today at the start of the twenty first century amateurs are better equipped than any professionals of the mid twentieth century let alone the nineteenth An amateur equipped with a 30 cm telescope and a CCD camera can easily image objects below magnitude 20 and from very dark sites 22 or 23 Such limits would have been within the realm of the 100 and 200 inch reflectors on Mount Wilson and Mount Palomar in the 1950s but no other observatories However even those telescopes took hours to reach such limits and then the photographic plates had to be developed fixed and examined by eye In the modern era digital images can be obtained in minutes and analyzed on the fly while more images are being downloaded Developments can be e mailed to other interested amateurs in real time during an observing session so that when a cataclysmic event takes place amateurs worldwide know about it As recently as the 1980s even professional astronomers could only dream of such instantaneous communication and proc sing ability Transactions of the International Astronomical Union: Reports on Astronomy C. de Jager,2012-12-06 This volume contains the fifteenth tri annual reports of the Presidents of the forty Commissions of the International Astronomical Union it refers to the progress in our discipline during the three years 1970 1971 and 1972 As compared to earlier volumes a gradual change in character is unmistakable The ever increasing flow of publications combined with the obvious necessity to keep the Reports at a reasonable size and price level has gradually forced the Commission Presidents to be more selective than before in drafting their Reports I have certainly stimulated them into that direction in order that Reports like these be

valuable and lasting it seems imperative that the individual contributions have the character of a critical overall review where a fairly complete summary is given of the major developments and discoveries of the past three years and in which the broad developments and new trends be clearly outlined while at the same time essential problems for future research are identified With respect to the latter item I have suggested the Commission Presidents to add to their reports a brief section on scientific priorities for future research in the field of their Commissions In order to save space I have suggested to Commission Presidents that references to published papers are given on the basis of their number in the published issues of Astronomy and Astrophysics Abstracts For instance the indication 06 078 019 or AAA 06 078

Astrophysical Data Kenneth R. Lang, 2012-12-06 This volume of Astrophysical Data deals with Planets and Stars a second volume Part II will give data for Galaxies and the Universe They both provide basic data for use by all scientists from the amateur astronomer to the professional astrophysicist In this first volume we not only provide physical parameters of planets stars and their environment but we also provide the celestial coordinates required to observe them Here we use c g s units for they are the most commonly used in astronomy and astrophysics but our volume begins with astronomical and physical constants and the conversion factors needed for other units The next section concerns the planets and their satellites it singles out the Earth and Moon for special treatment Spacecraft rendezvous with the planets and satellites have led to improved values for their atmospheric compositions orbital parameters magnetic fields masses radii rotation periods and surface pressures and temperatures This section also contains data for the asteroids comets and their debris We then discuss everyday stars beginning with the Sun and continuing with basic stellar data the brightest stars and nearby stars Special categories of stars such as the Wolf Rayet stars magnetic stars flare stars and RS CVn binary stars are included
