Food Flavorings P. R. Ashurst, 2012-12-06 The need for a further edition of a book is gratifying for contributors and editor alike When faced with the corresponding challenge to identify what has changed in one sector of a particular industry however initial enthusiasm frequently declines Nowhere is this more evident than in this book on food flavourings because the industry still remains the tantalising blend of art science and technology that was alluded to in the first edition Instrumentation and analytical skills can now identify flavour components down to nanogram and picogram concentrations and yet the skilled flavourist is often still able to defeat this scientific ability Many parts of the food industry and in particular the more traditional outlets such as baking and confectionery use flavours and methods of application that have changed little in fifty years At the other end of the spectrum advanced synthetic chemistry methods and computer controlled natural product processes can give the flavour industry a greater selection of higher quality materials than ever before The industry itself has in recent years undergone many commercial changes and in the U K some manufacturers names known for a century or more have disappeared to become part of larger corporate entities Flavours are for the first time controlled albeit in a small way by statute based on a European Directive

*Fragrances* David Rowe, 2009-02-12 Modern flavours and fragrances are complex formulated products containing blends of aroma compounds with auxiliary materials enabling desirable flavours or fragrances to be added to a huge range of products. From the identification and synthesis of materials such as cinnamaldehyde and vanillin in the 19th Century to the current application of advanced analytical techniques for identification of trace aroma compounds present in natural materials, the flavour and fragrance industry has developed as a key part of the worldwide specialty chemicals industry. With contributions mainly coming from industry based experts, *Chemistry Technology of Flavours and Fragrances* provides a detailed overview of the synthesis chemistry and application technology of the major classes of aroma compounds. With separate chapters covering important technical aspects such as the stability of aroma compounds, structure odour relationships and identification of aroma compounds, this book will be essential reading for both experienced and graduate level entrants to the flavour fragrance industry. It will also serve as an important introduction to the subject for chemists and technologists in those industries that use flavours and fragrances, e.g. food, cosmetics, toiletries and household products.
