## **Five New World Primates A Study In Comparative Ecology:**

**Five New World Primates** John Terborgh, 1983 Launching a new series Monographs in Behavior and Ecology this work is an intensive study of five species of New World monkeys all omnivores with a diet of fruit and small prey Notwithstanding their common diet they differ widely in group size social system ranging patterns and degree of territoriality Originally published in 1984 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These paperback editions preserve the original texts of these important books while presenting them in durable paperback editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 Food and Evolution Marvin Harris, Eric B. Ross, 2009-01-28 An unprecedented interdisciplinary effort suggests that there is a systematic theory behind why humans eat what they eat

*Primate Communities* J. G. Fleagle, Charles Janson, Kaye Reed, 1999-10-14 Comprehensive and unique volume exploring the differences and similarities between primate communities worldwide *Long-Term Field Studies of Primates* Peter M. Kappeler, David P. Watts, 2012-01-07 Some primate field studies have been on going for decades covering significant portions of individual life cycles or even multiple generations In this volume leading field workers report on the history and infrastructure of their projects in Madagascar Africa Asia and South America More importantly they provide summaries of their long term research efforts on primate behaviour ecology and life history highlighting insights that were only possible because of the long term nature of the study The chapters of this volume collectively outline the many scientific reasons for studying primate behaviour ecology and demography over multiple generations This kind of research is typically necessitated by the relatively slow life histories of primates Moreover a complete understanding of social organization and behaviour factors often influenced by rare but important events requires long term data collection Finally long term field projects are also becoming increasingly important foci of local conservation activities *Species Coexistence* M. Tokeshi, 2009-06-22 As a novel endeavour in ecological science this book focuses on a major issue in organismal life on Earth species coexistence The book crosses the usual disciplinary boundaries between palaeobiology ecology and evolutionary biology and provides a timely overview of the patterns and processes of species diversity and coexistence on a range of spatio temporal scales In this unique synthesis the author offers a critical and penetrating examination of the concepts and models of coexistence and community structure thus making a valuable contribution to the field of community ecology There is an emphasis on clarity and accessibility without sacrificing scientific rigour making this book suitable for both advanced students and individual researchers in ecology palaeobiology and environmental and evolutionary biology Comprehensive and contemporary synthesis Pulls together the aggregate influence of evolution and ecology on patterns in communities Balanced mix of theory and empirical work Clearly structured chapters with short introduction and summary **Forest Structure, Function and**

**Dynamics in Western Amazonia** Randall W. Myer, 2017-01-03 The Amazon Basin contains the largest and most diverse tropical rainforest in the world Besides the Andes and the Atlantic Ocean the rainforest is bounded to the north by the Guiana crystalline shield and to the south by the Brazilian crystalline shield marked at their edges by cataracts in the rivers and often dominated by grasslands This book is motivated not just by the Amazon's scientific interest but also by its role in many ecosystem functions critical to life on Earth These ecosystems are characterized both by their complexity and their interactive higher order linkages among both abiotic and biotic components Within Amazonia the Western Amazon west of 65 latitude is the most pristine and perhaps the most complex within the Amazon Basin This Western Amazon may be broadly divided into non flooded forests e g terra firme white sand palm and forests flooded with white water generally referred to as v rzea and with black water generally referred to as igap Here for the first time is a book devoted entirely to Western Amazonia containing chapters by scientists at the forefront of their own areas of expertise It should be a valuable resource for all future researchers and scholars who venture into Western Amazonia as it continues to be one of the most beautiful mysterious remote and important ecosystems on Earth      Primate Origins of Human Cognition and Behavior Tetsuro

Matsuzawa, 2009-03-12 Biologists and anthropologists in Japan have played a crucial role in the development of primatology as a scientific discipline Publication of Primate Origins of Human Cognition and Behavior under the editorship of Tetsuro Matsuzawa reaffirms the pervasive and creative role played by the intellectual descendants of Kinji Imanishi and Junichiro Itani in the fields of behavioral ecology psychology and cognitive science Matsuzawa and his colleagues humans and other primate partners explore a broad range of issues including the phylogeny of perception and cognition the origin of human speech learning and memory recognition of self others and species society and social interaction and culture With data from field and laboratory studies of more than 90 primate species and of more than 50 years of long term research the intellectual breadth represented in this volume makes it a major contribution to comparative cognitive science and to current views on the origin of the mind and behavior of humans      **The Common Marmoset in Captivity and Biomedical Research**

Robert P. Marini, Lynn M. Wachtman, Suzette D. Tardif, Keith Mansfield, James G. Fox, 2018-11-19 The Common Marmoset in Captivity and Biomedical Research is the first text dedicated exclusively to this species filling an urgent need for an encyclopedic compilation of the existing information Sponsored by the American College of Laboratory Animal Medicine as part of its authoritative Blue Book series the book covers the biology management diseases and clinical and research applications of this important species The common marmoset *Callithrix jacchus* has come of age in the scientific community as a behaviorally complex cognitively advanced small prolific and easily maintained nonhuman primate with many of the advantages of larger animals such as macaques but without the attendant physical and zoonotic risks Marmosets are currently being used in diverse areas of inquiry including vision and auditory research infectious disease cognitive neuroscience behavior reproductive biology toxicology and drug development and aging The marmoset genome has been

sequenced and there is currently an intensive effort to apply gene editing technologies to the species The creation of transgenic marmosets will provide researchers with a small nonhuman primate model to study a number of poorly understood disorders like autism Presents a complete view of the marmoset covering their biology and management diseases and clinical applications and research applications Includes contributions from renowned and international authors and editors Provides the first authoritative and comprehensive treatment of marmosets in biomedical research as part of the ACLAM Series

**Evolutionary Biology and Conservation of Titis, Sakis and Uacaris** Liza M. Veiga, Adrian A. Barnett, Stephen F. Ferrari, Marilyn A. Norconk, 2013-04-11 The neotropical primate family Pitheciidae consists of four genera *Cacajao* *Uacaris* *Callicebus* *Titis* *Chiropotes* bearded sakis and *Pithecia* sakis whose 40 species display a range of sizes social organisations ecologies and habitats Few are well known and the future survival of many is threatened yet pitheciines have been little studied This book is the first to review the biology of this fascinating and diverse group in full It includes fossil history reviews of the biology of each genus and among others specific treatments of vocalisations and foraging ecology These studies are integrated into considerations of current status and future conservation requirements on a country by country basis for each species A state of the art summary of current knowledge Evolutionary Biology and Conservation of Titis Sakis and Uacaris is a collective effort from all the major researchers currently working on these remarkable animals

**Seasonality in Primates** Diane K. Brockman, Carel P. van Schaik, 2005-11-17 The emergence of the genus *Homo* is widely linked to the colonization of new highly seasonal savannah habitats However until recently our understanding of the possible impact of seasonality on this shift has been limited because we have little general knowledge of how seasonality affects the lives of primates This book documents the extent of seasonality in food abundance in tropical woody vegetation and then presents systematic analyses of the impact of seasonality in food supply on the behavioural ecology of non human primates Syntheses in this volume then produce broad generalizations concerning the impact of seasonality on behavioural ecology and reproduction in both human and non human primates and apply these insights to primate and human evolution Written for graduate students and researchers in biological anthropology and behavioural ecology this is an absorbing account of how seasonality may have affected an important episode in our own evolution

**Ethnobiology and Biocultural Diversity** John R. Stepp, Felice S. Wyndham, Rebecca K. Zarger, 2002-01-01 The most comprehensive collection of papers in the field to date this volume presents state of the art research and commentary from more than fifty of the world's leading ethnobiologists Covering a wide range of ecosystems and world regions the papers center on global change and the relationships among traditional knowledge biological diversity and cultural diversity Specific themes include the acquisition persistence and loss of traditional ecological knowledge intellectual property rights and benefits sharing ethnobiological classification medical ethnobotany ethnoentomology ethnobiology and natural resource management homegardens and agriculture and traditional knowledge The volume will be of interest to scholars in anthropology ecology and related fields

and also to professionals in conservation and indigenous rights organizations

Phylogeny and Conservation Andy Purvis, John L. Gittleman, Thomas M. Brooks, 2005-09-22 Phylogeny is a potentially powerful tool for conserving biodiversity This book explores how it can be used to tackle questions of great practical importance and urgency for conservation Using case studies from many different taxa and regions of the world the volume evaluates how useful phylogeny is in understanding the processes that have generated today's diversity and the processes that now threaten it The urgency with which conservation decisions have to be made as well as the need for the best possible decisions make this volume of great value to researchers practitioners and policy makers

*Primate Cognition* Michael Tomasello, Josep Call, 1997-09-18 Soon after Charles Darwin formulated his theory of evolution primate cognition became a major area of research In this book Michael Tomasello and Josep Call assess the current state of our knowledge about the cognitive skills of non human primates They integrate empirical findings on the topic from the beginning of the century to the present placing this research in theoretical perspective They begin with an examination of the way primates adapt to their physical world mostly for the purpose of foraging The second part of the book looks at primate social knowledge and focuses on the adaptations of primates to their social world for purposes of competition and cooperation In the third section the authors construct a general theory of primate cognition distinguishing the cognition in primates from that of other mammals human in particular Their broad ranging theory provides a guide for future research *Primate Cognition* is an enlightening exploration of the cognitive capacities of our nearest primate relatives and a useful resource for a wide range of researchers and students in psychology behavioral biology primatology and anthropology

Lemur Social Systems and Their Ecological Basis J. Ganzhorn, P.M. Kappeler, 2013-06-29 The past decade has seen a steady increase in studies of lemur behavior and ecology As a result there is much novel information on newly studied populations and even newly discovered species that has not yet been published or summarized In fact lemurs have not been the focus of an international symposium since the Prosimian Biology Conference in London in 1972 Moreover research on lemurs has reached a new quality by addressing general issues in behavioral ecology and evolutionary biology Although lemurs provide important comparative information on these topics this aspect of research on lemurs has not been reviewed and compared with similar studies in other primate radiations Thus as did many in the field we felt that the time was ripe to review and synthesize our knowledge of lemur behavioral ecology Following an initiative by Gerry Doyle we organized a symposium at the XIVth Congress of the International Primatological Society in Strasbourg France where 15 contributions summarized much new information on lemur social systems and their ecological basis This volume provides a collection of the papers presented at the Strasbourg symposium plus two reports from recently completed field projects Each chapter was peer reviewed typically by one lemurologist and one other biologist The first three chapters present novel information from the first long term field studies of three enigmatic species Sterling describes the social organization of *Daubentonia madagascariensis* showing that aye aye ranging patterns deviate from those

of all other nocturnal primates      Forest Canopies Margaret D. Lowman, H. Bruce Rinker, 2004-09-28 The treetops of the world's forests are where discovery and opportunity abound however they have been relatively inaccessible until recently This book represents an authoritative synthesis of data anecdotes case studies observations and recommendations from researchers and educators who have risked life and limb in their advocacy of the High Frontier With innovative rope techniques cranes walkways dirigibles and towers they finally gained access to the rich biodiversity that lives far above the forest floor and the emerging science of canopy ecology In this new edition of *Forest Canopies* nearly 60 scientists and educators from around the world look at the biodiversity ecology evolution and conservation of forest canopy ecosystems Comprehensive literature list State of the art results and data sets from current field work Foremost scientists in the field of canopy ecology Expanded collaboration of researchers and international projects User friendly format with sidebars and case studies Keywords and outlines for each chapter      **Mammals of the Neotropics, Volume 3** John F. Eisenberg, Kent H. Redford, 1989 This volume provides a survey and synthesis of current knowledge of the more than 650 species of land and marine mammals found in Ecuador Peru Bolivia and Brazil as well as information on the mammalian fossil record current biodiversity and biogeography of this region Chapters present up to date taxonomic information ecological and behavioral characteristics conservation status and distribution maps for most species Copyright Libri GmbH All rights reserved

Fourteen Monkeys Melissa Stewart, 2021-07-06 In Manu National Park in Peru an amazing fourteen different species of monkeys live together That's more than in any other rainforest in the world How can they coexist so well Find out in this lyrical rhyming picture book that explores each monkey's habits diet and home illustrating how this delicate ecosystem and its creatures live together in harmony      **Primate Anti-Predator Strategies** Sharon Gursky-Doyen, K.A.I.

Nekaris, 2007-05-31 Since the 1960s primatologists have recognized the impact of predation on the evolution of morphology the social systems and cognitive behavior of monkeys and apes but few studies considered its impact on the prosimians lemurs lorises galagos and tarsiers This comprehensive volume written by experts in the field narrows this gap by highlighting the effect of predation on the order Primates in general Theoretical approaches to understanding how primates perceive predation threat as well as proximate and ultimate causes to address threat and attack are considered across the primate order Although this volume concentrates on the least known group in this theoretical area the prosimians contributions by researchers on numerous primate taxa across four major geographical regions make this a novel and exciting contribution to students interested in primate evolution and ecology      Biological Diversity Anne E. Magurran, Brian J. McGill, 2011 This book provides an up to date review of the methods of measuring and assessing biological diversity together with their application      *The Gibbons* Susan Lappan, Danielle Whittaker, 2009-06-02 It is a great honor to be asked to introduce this exciting new volume having been heavily involved in the first comprehensive synthesis in the early 1980s Gibbons are the most enthralling of primates On the one hand they are the most appealing animals with their upright posture

and body shape facial markings dramatic arm swinging locomotion and suspensory postures and devastating duets on the other hand the small apes are the most diverse hence biologically valuable and informative of our closest relatives It is hard for me to believe that it is 40 years to the month since I first set foot on the Malay Peninsula to start my doctoral study of the siamang I am very proud to have followed in the footsteps of the great pioneer of primate field study Clarence Ray Carpenter CR or Ray who I was fortunate to meet twice in Pennsylvania and in Zurich first in Central America in 1967 and then in Southeast Asia It is 75 years since he studied howler monkeys on Barro Colorado Island in the Panama Canal Zone It is 70 years since he studied the white handed gibbon in Thailand
