Fault-Tolerant Control for Time-Varying Delayed T-S Fuzzy Systems Shaoxin Sun, Huaguang Zhang, Xiaojie Su, Jinyu Zhu, 2023-05-15 This book delves into the complexities of fault estimation and fault tolerant control for nonlinear time delayed systems Through the use of multiple integral observers it addresses fault estimation and active fault tolerant control for time delayed fuzzy systems with actuator faults and both actuator and sensor faults Additionally the book explores the use of sliding mode control to solve issues of sensor fault estimation intermittent actuator fault estimation and active fault tolerant control for time delayed switched fuzzy systems Furthermore it presents the use of H_∞ guaranteed cost control for both time delayed switched fuzzy systems and time delayed switched fuzzy stochastic systems with intermittent actuator and sensor faults Finally the problem of delay dependent finite time fault tolerant control for uncertain switched T S fuzzy systems with multiple time varying delays intermittent process faults and intermittent sensor faults is studied The research on fault estimation and tolerant control has drawn attention from engineers and scientists in various fields such as electrical mechanical aerospace chemical and nuclear engineering The book provides a comprehensive framework for this topic placing a strong emphasis on the importance of stability analysis and the impact of result conservatism on the design and implementation of observers and controllers It is intended for undergraduate and graduate students interested in fault diagnosis and tolerant control technology researchers studying time varying delayed T S fuzzy systems and observer controller design engineers working on system stability applications

Advances and Technologies in High Voltage Power Systems Operation, Control, Protection and Security Hassan Haes Alhelou, Pierluigi Siano, 2021-08-30 The electrical demands in several countries around the world are increasing due to the huge energy requirements of prosperous economies and the human activities of modern life In order to economically transfer electrical powers from the generation side to the demand side these powers need to be transferred at high voltage levels through suitable transmission systems and power substations To this end high voltage transmission systems and power substations are in demand Actually they are at the heart of interconnected power systems in which any faults might lead to unsuitable consequences abnormal operation situations security issues and even power cuts and blackouts In order to cope with the ever increasing operation and control complexity and security in interconnected high voltage power systems new architectures concepts algorithms and procedures are essential This book aims to encourage researchers to address the technical issues and research gaps in high voltage transmission systems and power substations in modern energy systems

Fault Diagnosis of Nonlinear Systems Using a Hybrid Approach Ehsan Sobhani-Tehrani, Khashayar Khorasani, 2009-06-22

The increasing complexity of space vehicle such as satellites and the cost reduction measures that have affected satellite operators are increasingly driving the need for more autonomy in satellite diagnostics and control systems Current methods for detecting and correcting anomalies onboard the spacecraft as well as on the ground are primarily manual and labor intensive

and therefore tend to be slow Operators inspect telemetry data to determine the current satellite health They use various statistical techniques and models but the analysis and evaluation of the large volume of data still require extensive human intervention and expertise that is prone to error Furthermore for spacecraft and most of these satellites there can be potentially unduly long delays in round trip communications between the ground station and the satellite In this context it is desirable to have onboard fault diagnosis system that is capable of detecting isolating identifying or classifying faults in the system without the involvement and intervention of operators Toward this end the principle goal here is to improve the efficiency accuracy and reliability of the trend analysis and diagnostics techniques through utilization of intelligent based and hybrid based methodologies
