use Stein spaces *Fixed Point Theory for Lipschitzian-type Mappings with Applications* Ravi P. Agarwal, Donal O'Regan, D. R. Sahu, 2009-06-12 In recent years the fixed point theory of Lipschitzian type mappings has rapidly grown into an important field of study in both pure and applied mathematics. It has become one of the most essential tools in nonlinear functional analysis. This self-contained book provides the first systematic presentation of Lipschitzian type mappings in metric and Banach spaces. The first chapter covers some basic properties of metric and Banach spaces. Geometric considerations of underlying spaces play a prominent role in developing and understanding the theory. The next two chapters provide background in terms of convexity, smoothness and geometric coefficients of Banach spaces including duality mappings and metric projection mappings. This is followed by results on existence of fixed points, approximation of fixed points by iterative methods and strong convergence theorems. The final chapter explores several applicable problems arising in related fields. This book can be used as a textbook and as a reference for graduate students, researchers and applied mathematicians working in nonlinear functional analysis, operator theory, approximations by iteration, theory of convexity and related geometric topics and best approximation theory.

Fixed Point Theory in Metric Type Spaces Ravi P. Agarwal, Erdal KARAPINAR, Donal O'Regan, Antonio Francisco Roldán-López-de-Hierro, 2016-03-24 Written by a team of leading experts in the field, this volume presents a self-contained account of the theory, techniques and results in metric type spaces in particular in G -metric spaces. That is, the text approaches this important area of fixed point analysis beginning from the basic ideas of metric space topology. The text is structured so that it leads the reader from preliminaries and historical notes on metric spaces in particular G -metric spaces and on mappings to Banach type contraction theorems in metric type spaces, fixed point theory in partially ordered G -metric spaces, fixed point theory for expansive mappings in metric type spaces, generalizations, present results and techniques in a very general abstract setting and framework. Fixed point theory is one of the major research areas in nonlinear analysis. This is partly due to the fact that in many real world problems, fixed point theory is the basic mathematical tool used to establish the existence of solutions to problems which arise naturally in applications. As a result, fixed point theory is an important area of study in pure and applied mathematics and it is a flourishing area of research.

Topological Fixed Point Theory and Applications Boju Jiang, 2006-11-14 This selection of papers from the Beijing conference gives a cross section of the current trends in the field of fixed point theory as seen by topologists and analysts. Apart from one survey article, they are all original research articles on topics including equivariant theory, extensions of Nielsen theory, periodic orbits of discrete and continuous dynamical systems and new invariants and techniques in topological approaches to analytic problems.

Fixed Point Theory and Its Applications Robert F. Brown, 1988 Represents the proceedings of an informal three-day seminar held during the International Congress of Mathematicians in Berkeley in 1986. This work covers topics including topological fixed point theory from both the algebraic and geometric viewpoints and the fixed point theory of nonlinear operators on normed linear spaces and its applications. **Metric Fixed**

Gairola, Rajendra Pant, 2017 Fixed point theory is a growing and exciting branch of mathematics with a variety of wide applications in biological and mathematical sciences proposing newer applications in discrete dynamics and super fractals The present endeavour is to report the latest trend in metric fixed point theory emphasising newer applications in numerical analysis discrete dynamics and fractal graphics besides traditional applications The book is useful to a large class of readers interested in analysis applicable mathematics and fractal graphics The articles have been selected carefully so that the book is useful for sophomores up to senior researchers looking for new material and new ideas in the existence of fixed points new applications and survey articles A few chapters included herein are formal in nature and suggest new directions of research in this area which are especially useful to beginners in the field The book is divided into two parts Part I contains surveys and existence and convergence results In Part II Applications various applications of fixed point theory to initial value problems local attractivity of certain functional integral equation solutions fractals and super fractals and solving equations in numerical praxis have been discussed The present book which is dedicated to Professor Shyam Lal Singh consists of articles contributed by outstanding workers all over the world Of course some of the articles were selected from the Symposium on Fixed Point Theory and Applications dedicated to him held during the 19th Annual Conference Of India 10 12 November 2016 organised by Pauri Garhwal of the Department of Mathematics H N B Garhwal Central University **Fixed Point Theory** Andrzej Granas, James Dugundji, 2013-03-09 The aim of this monograph is to give a unified account of the classical topics in fixed point theory that lie on the border line of topology and non linear functional analysis emphasizing developments related to the Leray Schauder theory Using for the most part geometric methods our study centers around

formulating those general principles of the theory that provide the foundation for many of the modern results in diverse areas of mathematics. The main text is self-contained for readers with a modest knowledge of topology and functional analysis; the necessary background material is collected in an appendix or developed as needed. Only the last chapter presupposes some familiarity with more advanced parts of algebraic topology. The Miscellaneous Results and Examples given in the form of exercises form an integral part of the book and describe further applications and extensions of the theory. Most of these additional results can be established by the methods developed in the book and no proof in the main text relies on any of them. More demanding problems are marked by an asterisk. The Notes and Comments at the end of paragraphs contain references to the literature and give some further information about the results in the text.

Multiple Fixed-Point Theorems and Applications in the Theory of ODEs, FDEs and PDEs Svetlin G. Georgiev, Khaled Zennir, 2020-06-09. Multiple Fixed Point Theorems and Applications in the Theory of ODEs, FDEs and PDEs covers all the basics of the subject of fixed point theory and its applications with a strong focus on examples, proofs and practical problems, thus making it ideal as course material but also as a reference for self-study. Many problems in science lead to nonlinear equations $T \times F \times X$ posed in some closed convex subset of a Banach space. In particular, ordinary, fractional, partial differential equations and integral equations can be formulated like these abstract equations. It is desirable to develop fixed point theorems for such equations. In this book, the authors investigate the existence of multiple fixed points for some operators that are of the form $T \circ F$ where T is an expansive operator and F is a k -set contraction. This book offers the reader an overview of recent developments of multiple fixed point theorems and their applications. About the Authors: Svetlin G. Georgiev is a mathematician who has worked in various areas of mathematics. He currently focuses on harmonic analysis, functional analysis, partial differential equations, ordinary differential equations, Clifford and quaternion analysis, integral equations and dynamic calculus on time scales. Khaled Zennir is an assistant professor at Qassim University, KSA. He received his PhD in mathematics in 2013 from Sidi Bel Abbès University, Algeria. He obtained his Habilitation in mathematics from Constantine University, Algeria, in 2015. His research interests lie in nonlinear hyperbolic partial differential equations, global existence, blow-up and long-time behavior.
