Price, Dennis Price, 2001-02-16 This authoritative reference work will provide a comprehensive source of information for readers concerned with the highly diverse subject of fire retardance The emphasis is on the burning behaviour and flame retarding properties of polymeric materials It covers combustion flame retardants smoke and toxic products generally and goes on to concentrate on more material specific aspects of combustion in relation to textiles composites and bulk polymers A wide range of fire retardant materials are covered including research in the new field of nanocomposites Knovel

Flame-Retardant Polymeric Materials Menachem Lewin, 2013-11-11 Flammability has been recognized as an increasingly important social and scientific problem Fire statistics in the United States Report of the National Commission on Fire Prevention and Control America Burning 1973 emphasized the vast devastation to life and property 12 000 lives lost annually due to fire and these deaths are usually caused by inhaling smoke or toxic gases 300 000 fire injuries 11 4 billion dollars in fire cost at which 2 7 billion dollars is related to property loss a billion dollars to burn injury treatment and 3 3 billion dollars in productivity loss It is obvious that much human and economic misery can be attributed to fire situations In relation to this polymer flammability has been recognized as an increasingly important social and scientific problem The development of flame retardant polymeric materials is a current example where the initiative for major scientific and technological developments is motivated by sociological pressure and legislation This is part of the important trend toward a safer environment and sets a pattern for future example Flame retardancy deals with our basic everyday life situations housing work areas transportation clothing and so forth the macroenvironment capsule within which homosapiens live As a result flame retardant polymers are now emerging as a specific class of materials leading to new and diversified scientific and technological ventures **Theory of Flame Retardation of Polymeric Materials** Li Jianjun, Ou Yuxiang, 2019-08-19

Flame retardant materials are of vital importance in guaranteeing personal security Especially the demand for non toxic low smoking polymerized flame retardants increases and new materials enter the market The authors present the fundamental theory of polymer combustion compare different flame retardants describe smoke suppression mechanisms and explain analyzing techniques for new materials Ecological Aspects of Polymer Flame Retardancy Gennady

Zaikov, Lomakin, 2014-07-30 This book deals with the ecological aspects of polymer flame retardation It deals with methods for estimating polymer flammability the mode of action of modern flame retardants and ecological concerns of the most used halogenated flame retardants **Fire Retardancy of Polymeric Materials** Charles A. New Types of Persistent Halogenated Compounds

Jaakko Paasivirta, 2008-01-26 Environmental Chemistry is a relatively young science Interest in this subject however is growing very rapidly and although no agreement has been reached as yet about the exact content and limits of this interdisciplinary discipline there appears to be increasing interest in seeing environmental topics which are based on chemistry embodied in this subject One of the first objectives of Environmental Chemistry must be the study of the environment and of natural chemical processes which occur in the environment A major purpose of this series on Environmental Chemistry therefore is to present a reasonably uniform view of various aspects of the chemistry of the environment and chemical reactions occurring in the environment The industrial activities of man have given a new dimension to Environmental Chemistry We have now synthesized and described over five million chemical compounds and chemical industry produces about hundred and fifty million tons of synthetic chemicals annually We ship billions of tons of oil per year and through mining operations and other geophysical modifications large quantities of inorganic and organic materials are released from their natural deposits Cities and metropolitan areas of up to 15 million inhabitants produce large quantities of waste in relatively small and confined areas Much of the chemical products and waste products of modern society are released into the environment either during production storage transport use or ultimate disposal These released materials participate in natural cycles and reactions and frequently lead to interference and disturbance of natural systems

Polymer Additives Jiri E. Kresta, 2012-12-06 Ever since the beginning of the plastics and rubber industry it was realized that useful products could be produced only if certain additives were incorporated into polymers With the help of these additives when physically dispersed in a polymer matrix it has been possible to improve stability against thermal oxidative UV hydrolytic and biological degradation mechanical properties flammability cost and processibility of plastics The enormous

growth of the volume of plastics consumed by modern society and new application areas for plastics have created a demand for new better additives and better understanding of their functions in polymer systems As a result of these trends there is a need for sharing of information on progress achieved in the area of polymer additives among engineers and scientists of the plastics industry and academia This book is based on expanded and updated papers originally presented at the International Symposium on Polymer Additives which was held in Las Vegas Nevada and was sponsored by the American Chemical Society Division of Polymeric Materials Science and Engineering The book is divided into five parts which cover advances in various areas of polymer additives The first part is devoted to the progress in understanding of UV degradation and stabilization of various polymers Oxidation degradation and stabilization of plastic materials is covered in the second part New developments in the stabilization of PVC are presented in the third part
