Flavins Eduardo Silva, Ana M. Edwards, 2007-10-31 Flavins and flavoproteins are a widely investigated and highly versatile group of compounds. Participation of these compounds in photochemistry and photobiology processes are of particular importance in the fields of biology, chemistry, and medicine. Written by leading experts in the field, each section of the book includes a historical overview of the subject, state of the art developments, and future perspectives. Flavins: Photochemistry and Photobiology begins with the properties and applications of flavins, including their photochemistry in aqueous and organic solutions. Subsequent sections discuss riboflavin as a visible light sensitizer in the photo-degradation of drugs, antiviral and antibacterial effects, the role of flavins in light-induced toxicity, and blue light-initiated DNA repair by photolyase. Finally, there are sections on the flavin-based photoreceptors in plants, bacteria, and eukaryotic photosynthetic flagellates. This book brings together leading experts with a unique interdisciplinary emphasis to provide an authoritative resource on flavins and their role in photochemistry and photobiology.

Oxidases, Dehydrogenases and Related Systems, 2012-12-21 The dynamic field of flavin and flavoprotein biochemistry has seen rapid advancement in recent years. This comprehensive two-volume set provides an overview of all aspects of contemporary research in this important class of enzymes. Topics treated include flavoproteins involved in energy generation, signal transduction, and electron transfer, including respiration, oxygen activation by flavoproteins, the biology and biochemistry of complex flavoproteins, flavin and flavoprotein photochemistry, photophysics, as well as biotechnological applications of flavoproteins. Recent developments in this field include new structures, including those of large membrane integral electron transfer complexes containing FMN or FAD, elucidation of the role of flavoproteins in cell signalling pathways, including both phototaxis and the circadian cycle, and important new insights into the reaction mechanisms of flavin-containing enzymes. This volume focussing on oxidases, dehydrogenases, and related systems is an essential reference for all researchers in
