Effects on Adults Richard Q. Bell, Lawrence V. Harper, 2020-09-10 It is usual to consider the effects parents have on children this title originally published in 1977 reverses the focus and reveals a subject every bit as important and interesting The authors both professional psychologists present their findings under three major headings History Theories and Research Approaches and Concepts and Findings that discuss the social psychological and biological influences children exert on parents Bell and Harper oppose the intellectual apartheid that prevents behavioural scientists from investigating the continuity of interaction processes from other animals to man and include substantial research findings in mammalian biology to show more precisely the reciprocal relations between parents and their offspring Their bidirectional approach to the study of child rearing is meant to offset empirical prejudices that had so far dominated child care sciences at the time

Medicine F.R. Hine, R.C. Carson, G.L. Maddox, R.J. Jr. Thompson, R.B. Williams, 2012-12-06 This book is the product of many years experience teaching behavioral science in a way that demonstrates its relevance to clinical medicine We have been guided by the reactions and evaluations of many first year medical students The result is a conceptual framework different from those that we and others had tried before Because the clinical relevance of knowledge about human behavior is less apparent to many first year students than that of the other traditional pre clinical courses books and courses organized as brief introductions to psychology sociology and behavioral neurology have often been poorly received Various medical schools and texts have explored ways to overcome this difficulty One text organizes the presentation around very practical problems which are of unmistakable interest to the future physician the therapeutic relationship death and dying sexuality and pain to give a few examples Another emphasizes stages of development periods of the human life cycle as its organizing principle Both of these approaches have merit and have been used successfully in various schools They seem to us however to have a potentially serious shortcoming They focus student attention too much on the more immediately intriguing issues of specific clinical problems or on the more easily recognized age specific behavioral issues In the limited time available the teaching of general principles of human behavioral functioning may then be neglected Behavioral Effects of Energy and

Protein Deficits ,1979 *Child Influences on Marital and Family Interaction* Richard M Lerner,Graham B.

Spanier,2013-10-22 *Child Influences on Marital and Family Interaction A Life Span Perspective* book grew out of a conference sponsored by the Division of Individual and Family Studies in the College of Human Development at the Pennsylvania State University in April 1977 The chapters for this volume are revised versions of the papers originally presented at the conference The book explores the conceptual methodological and empirical issues in the study of the child and his or her family It details how the age normative and atypical development of the child contributes to the parents marital quality and to the entire family s interaction patterns across the life span of both the child and parents Consequently the child is seen as capable of contributing to marriage and family relationships not only when he or she is in utero a neonate or an infant but also when the child reaches middle and late childhood adolescence and the adulthood and aged years as well

Socialization in Infancy S. Feinman, Michael Lewis, 2013-06-29 How are we to understand the complex forces that shape human behavior A variety of diverse perspectives drawing on studies of human behavioral ontogeny as well as humanity's evolutionary heritage seem to provide the best likelihood of success It is in an attempt to synthesize such potentially disparate approaches to human development into an integrated whole that we undertake this series on the genesis of behavior In many respects the incredible burgeoning of research in child development over the last two decades or so seems like a thousand lines of inquiry spreading outward in an incoherent starburst of effort The need exists to provide on an ongoing basis an arena of discourse within which the threads of continuity among those diverse lines of research on human development can be woven into a fabric of meaning and understanding Scientists scholars and those who attempt to translate their efforts into the practical realities of the care and guidance of infants and children are the audience that we seek to reach Each requires the opportunity to see to the degree that our knowledge in given areas permits various aspects of development in a coherent integrated fashion It is hoped that this series which brings together research on infant biology developing infant capacities animal models and impact of social cultural and familial forces on development and the distorted products of such forces under certain circumstances serves these important social and scientific needs
