

- Laser radiation predominantly causes injury via thermal effects.
- Even moderately powered lasers can cause injury to the eye.
- Some lasers are so powerful that even the diffuse reflection from a surface can be hazardous.
- Incidents have been reported involving injuries due to laser beam reflected off a droplet.
- Other incidents include lasers that fail to stop after the foot pedal has been released, burns to lips tongue and cheeks, injuries to eye due to usage wrong eye wear not specific to the laser wavelength being used.

## Effects Of High Power Laser Radiation:

**Effects of High-Power Laser Radiation** John Ready, 2012-12-02 Effects of High Power Laser Radiation describes the interactions between high power laser beams and matter This book is divided into eight chapters that particularly focus on interactions such as heating melting vaporization and plasma production The opening chapters examine the laser properties types measurement techniques and safety aspects The succeeding chapters deal with a variety of physical phenomena and mechanisms of laser induced particle emission as well as the initiation and development of gas breakdown phenomena Other chapters explore the effects and damage of various interactions in transparent materials and on biological systems The final chapter looks into the practical applications of the various laser effects to diverse technological fields This book will prove useful to scientists interested in the physical phenomena of laser effects and engineers interested in practical applications of laser effects Effects of high-power laser radiation John F. **High-Power Laser Radiation in Atmospheric Aerosols** V.E. Zuev, A.A. Zemlyanov, Yu.D. Kopytin, A.V. Kuzikovskii, 2012-12-06 Unique properties of laser radiation including its monochromatic properties polarization high spectral intensity coherence narrow beam divergence the possibility of controlling the pulse duration and radiation spectrum and finally the fact that extremely high power and energy create very favorable conditions for the extensive application of lasers to communication systems systems for the lidar sensing and ultra high precision ranging navigation remote monitoring of the environment and many other systems operating in the atmosphere The operative efficiency of the above systems depends significantly on the state of the atmosphere and the corresponding behavior of laser radiation propagating through it This circumstance has stimulated the studies of the above regularities during the past 10-15 years For the investigations to be carried out the scientists were forced to develop new theories and methods for studying the problem experimentally Moreover during such investigations some previously unknown phenomena were observed among them the nonlinear effects accompanying high power laser radiation propagating through the atmosphere are of paramount importance Among the nonlinear effects caused by high power laser radiation interaction with the atmosphere the effects accompanying the propagation of high power radiation through the atmospheric aerosols are of particular interest Aerosols always occur in the atmosphere It should be noted that the microphysical and optical characteristics of atmospheric aerosols vary widely this fact causes a great variety in the features of their interaction with radiation Theoretical Aspects of Laser Radiation and Its Interaction with Atomic and Molecular Systems, 1977 **Laser Induced Damage in Optical Materials, 1981**, 1983 **Laser Induced Damage In Optical Materials: 1981** Harold E.
