Real Prospects for Energy Efficiency in the United States National Research Council, National Academy of Engineering, National Academy of Sciences, America's Energy Future Panel on Energy Efficiency Technologies, 2010-07-10 America's economy and lifestyles have been shaped by the low prices and availability of energy. In the last decade however the prices of oil, natural gas and coal have increased dramatically leaving consumers and the industrial and service sectors looking for ways to reduce energy use. To achieve greater energy efficiency we need technology, more informed consumers and producers and investments in more energy efficient industrial processes, businesses, residences and transportation. As part of the America's Energy Future project, *Real Prospects for Energy Efficiency in the United States* examines the potential for reducing energy demand through improving efficiency by using existing technologies, technologies developed but not yet utilized widely and prospective technologies. The book evaluates technologies based on their estimated times to initial commercial deployment and provides an analysis of costs, barriers and research needs. This quantitative characterization of technologies will guide policy makers toward planning the future of energy use in America. This book will also have much to offer to industry leaders, investors, environmentalists and others looking for a practical diagnosis of energy efficiency possibilities.
