Ecology The Ascendent Perspective:

Ecology, the Ascendent Perspective Robert E. Ulanowicz, 1997 A challenge to existing Newtonian and Darwinian paradigms Ecology the Ascendent Perspective demonstrates that a theoretically reshaped science of ecology better suited to portraying the dynamics of the natural world can be a more effective means of ensuring its health Ecology, the Ascendent Perspective Robert E. Ulanowicz, 1999 **The Philosophy of Ecology** David R. Keller, Frank B. Golley, 2000 This is the first introductory anthology on the philosophy of ecology edited by an ecologist and a philosopher It illustrates the range of philosophical approaches available to ecologists and provides a basis for understanding the thinking on which many of today's environmental ideas are founded Collectively these seminal readings make a powerful statement on the value of ecological knowledge and thinking in alleviating the many problems of modern industrial civilization Issues covered include the challenges of defining scientific ecology tracing its genealogy and distinguishing the science from various forms of ecological like thinking the ontology of ecological entities and processes selected concepts of community stability diversity and niche the methodology of ecology rationalism and empiricism reductionism and holism the significance of evolutionary law for ecological science **God's Providence and Randomness in Nature** Robert John Russell, Joshua M. Moritz, 2019-02-11 In October 2014 a group of mathematicians physicists ecologists philosophers and theologians gathered at a special conference in Berkeley California to present the results of a two year research program dubbed Project SATURN This program explored many rich avenues of thought at the intersection of modern science and Christian theology Chief among them is the possibility that specific processes might be so complex that they do not have sufficient physical causes Known as ontological indeterminism this idea has profound implications for theology Specifically it allows God to be thought of as acting providentially within nature without violating the laws and processes of nature Such a momentous insight could influence how we understand free will natural evil suffering in nature and the relation between divine providence and human evolution The essays collected here discussed these topics and were initially presented at the 2014 conference Part I establishes the scientific basis for conceptualizing specific processes in the universe as inherently random and possibly indeterministic Part II discusses the philosophical and theological issues that spring from this understanding Together they represent the cutting edge of thought in the increasingly productive dialogue between science and theology Short for the Scientific and Theological Understandings of Randomness in Nature Project SATURN was created by the Center for Theology and the Natural Sciences a Program of the Graduate Theological Union Berkeley It was funded with a grant administered by Calvin College and provided by the John Templeton Foundation **Hierarchical Perspectives on Marine Complexities** Spencer Apollonio, 2002-10-30 The Gulf of Maine supports a vital fishery for North America and is one of the most intensely studied marine ecosystems in the world An understanding of its ecology has practical applications to management of other marine systems and fisheries This book is the first application of Hierarchy Theory to the ecological workings of the Gulf of Maine

and of marine ecosystems in general Hierarchy Theory offers a perspective that simplifies the apparent complications and contradictions of ecosystems which encompass a number of scales of time from minutes to decades or longer and of space from centimeters to kilometers Spencer Apollonio explores in detail the idea of natural constraints inherent in hierarchical ecosystems and the impact upon such systems when constraints are reduced or removed He argues that conventional fisheries management which practices the removal of these constraints may be doomed to failure Apollonio focuses in particular on the groundfish crisis in the Gulf the precipitous decline due to overfishing in populations of cod haddock pollock hakes and various types of flounders which have together constituted the mainstay of the Maine fishing industry for centuries Hierarchical Perspectives on Marine Complexities presents a compelling case for a new approach that holds the promise of resource sustainability in the face of enormously complicated natural and cultural forces **The Philosophical**

Foundations of Ecological Civilization Arran Gare, 2016-08-05 The global ecological crisis is the greatest challenge humanity has ever had to confront and humanity is failing The triumph of the neo liberal agenda together with a debauched scientism has reduced nature and people to nothing but raw materials instruments and consumers to be efficiently managed in a global market dominated by corporate managers media moguls and technocrats The arts and the humanities have been devalued genuine science has been crippled and the quest for autonomy and democracy undermined The resultant trajectory towards global ecological destruction appears inexorable and neither governments nor environmental movements have significantly altered this or indeed seem able to The Philosophical Foundations of Ecological Civilization is a wide ranging and scholarly analysis of this failure This book reframes the dynamics of the debate beyond the discourses of economics politics and techno science Reviving natural philosophy to align science with the humanities it offers the categories required to reform our modes of existence and our institutions so that we augment rather than undermine the life of the ecosystems of which we are part From this philosophical foundation the author puts forth a manifesto for transforming our culture into one which could provide an effective global environmental movement and provide the foundations for a global ecological civilization **Nature in Common?** Ben Minteer, 2009-04-15 A groundbreaking contribution to a central debate in environmentalism
