Econometric Models And Methods:

Econometric models and methods Carl F. Christ, 1968 **Econometric Models, Techniques, and Applications** Michael D. Intriligator, 1978 The econometric approach Models and econometric models Single equation estimation Application of single equation estimation Simultaneous equations The uses of econometrics Economic Models Dipak R. Basu, 2009 Model Building is the most fruitful area of economics designed to solve real world problems using all available methods such as mathematical computational and analytical without distinction Wherever necessary we should not be reluctant to develop new techniques whether mathematical or computational That is the philosophy of this volume The volume is divided into three distinct parts Methods Theory and Applications The Methods section is in turn subdivided into Mathematical Programming and Econometrics and Adaptive Control System which are widely used in econometric analysis The impacts of fiscal policy in a regime with independent monetary authority and dynamic models of environmental taxation are considered In the section on Modelling Business Organization a model of a Japanese organization is presented Furthermore a model suitable for an efficient budget management of a health service unit by applying goal programming method is analyzed taking into account various socio economic factors This is followed by a section on Modelling National Economies in which macroeconomic models for the EU member countries are analyzed to find instruments that stabilize inflation with coordinated action Econometric Models and Methods Elmor L. Peterson, 1966 **Econometric Models, Techniques, and Applications** Intriligator Michael D., 1978 **Specification, Estimation, and Analysis of Macroeconometric Models** Ray C. Fair, 1984 This book gives a practical applications oriented account of the latest techniques for estimating and analyzing large nonlinear macroeconomic models Ray Fair demonstrates the application of these techniques in a detailed presentation of several actual models including his United States model his multicountry model Sargent's classical macroeconomic model autoregressive and vector autoregressive models and a small twelve equation linear structural model He devotes a good deal of attention to the difficult and often neglected problem of moving from theoretical to econometric models In addition he provides an extensive discussion of optimal control techniques and methods for estimating and analyzing rational expectations models A computer program that handles all the techniques in the book is available from the author making it possible to use the techniques with little additional programming The book presents the logic of this program A smaller program for personal microcomputers for analysis of Fair's United States model is available from Urban Systems Research Engineering Inc Anyone wanting to learn how to use large macroeconomic models including researchers graduate students economic forecasters and people in business and government both in the United States and abroad will find this an essential guidebook Econometric Models K. Puttaswamaiah, 1994 An attempt has been made in this work to provide a selective set of contributions on economic thinking in their applied aspects Prof Jan Tinbergen the first Nobel Laureate in Economics has said in his Foreword that This book consists of an impressive set of original

contributions of economic thinking in applied version Spatial Econometrics: Methods and Models L. Anselin, 2013-03-09

Spatial econometrics deals with spatial dependence and spatial heterogeneity critical aspects of the data used by regional scientists These characteristics may cause standard econometric techniques to become inappropriate In this book I combine several recent research results to construct a comprehensive approach to the incorporation of spatial effects in econometrics My primary focus is to demonstrate how these spatial effects can be considered as special cases of general frameworks in standard econometrics and to outline how they necessitate a separate set of methods and techniques encompassed within the field of spatial econometrics My viewpoint differs from that taken in the discussion of spatial autocorrelation in spatial statistics e g most recently by Cliff and Ord 1981 and Upton and Fingleton 1985 in that I am mostly concerned with the relevance of spatial effects on model specification estimation and other inference in what I call a model driven approach as opposed to a data driven approach in spatial statistics I attempt to combine a rigorous econometric perspective with a comprehensive treatment of methodological issues in spatial analysis **Statistical and Econometric Methods for Transportation Data Analysis, Second Edition** Simon P. Washington, Matthew G. Karlaftis, Fred L. Mannering, 2010-12-02

The complexity diversity and random nature of transportation problems necessitates a broad analytical toolbox Describing tools commonly used in the field *Statistical and Econometric Methods for Transportation Data Analysis Second Edition* provides an understanding of a broad range of analytical tools required to solve transportation problems It includes a wide breadth of examples and case studies covering applications in various aspects of transportation planning engineering safety and economics After a solid refresher on statistical fundamentals the book focuses on continuous dependent variable models and count and discrete dependent variable models Along with an entirely new section on other statistical methods this edition offers a wealth of new material New to the Second Edition A subsection on Tobit and censored regressions An explicit treatment of frequency domain time series analysis including Fourier and wavelets analysis methods New chapter that presents logistic regression commonly used to model binary outcomes New chapter on ordered probability models New chapters on random parameter models and Bayesian statistical modeling New examples and data sets Each chapter clearly presents fundamental concepts and principles and includes numerous references for those seeking additional technical details and applications To reinforce a practical understanding of the modeling techniques the data sets used in the text are offered on the book's CRC Press web page PowerPoint and Word presentations for each chapter are also available for download **Econometric Models, Techniques, and Applications** Michael D. Intriligator, Ronald G. Bodkin, Cheng Hsiao, 1996 This book surveys the theories techniques model building and data collection and applications of econometrics

KEY TOPICS It focuses on those aspects of econometrics that are of major importance to readers and researchers interested in performing evaluating or understanding econometric studies in a variety of areas It reviews matrix notation and the use of multivariate statistics discusses the specification of the model and the development of data for its estimation covers recent

Models, Methods, Concepts & Applications of the Analytic Hierarchy Process Thomas L. Saaty, Luis G. Vargas, 2012-12-06 Models Methods Concepts and Applications of the Analytic Hierarchy Process is a volume dedicated to selected applications of the Analytic Hierarchy Process AHP focused on three themes economics the social sciences and the linking of measurement with human values 1 The AHP offers economists a substantially different approach to dealing with economic problems through ratio scales The main mathematical models on which economics has based its quantitative thinking up to now are utility theory which uses interval scales and linear programming We hope that the variety of examples included here can perhaps stimulate researchers in economics to try applying this new approach 2 The second theme is concerned with the social sciences The AHP offers psychologists and political scientists the methodology to quantify and derive measurements for intangibles We hope that the examples included in this book will encourage them to examine the methods of AHP in terms of the problems they seek to solve 3 The third theme is concerned with providing people in the physical and engineering sciences with a quantitative method to link hard measurement to human values In such a process one needs to interpret what the measurements mean A number is useless until someone understands what it means It can have different meanings in different problems Ten dollars are plenty to satisfy one's hunger but are useless by themselves in buying a new car Such measurements are only indicators of the state of a system but do not relate to the values of the human observers of that system AHP methods can help resolve the conflicts between hard measurement data and human values
