Applied Econometric Analysis Using Cross Section and Panel Data Deep Mukherjee, 2024-01-03. This book is a collection of 20 chapters on chosen topics from cross section and panel data econometrics. It explores both theoretical and practical aspects of selected cutting edge techniques which are gaining popularity among applied econometricians while following the motto of keeping things simple. Each chapter gives a basic introduction to one such method, directs readers to supplementary references and shows an application. The book takes into account that A. The field of econometrics is evolving very fast and leading textbooks are trying to cover some of the recent developments in revised editions. This book offers basic introduction to state of the art techniques and recent advances in econometric models with detailed applications from various developing and developed countries. B. An applied researcher or practitioner may prefer reference books with a simple introduction to an advanced econometric method or model with no theorems but with a longer discussion on empirical application. Thus an applied econometrics textbook covering these cutting edge methods is highly warranted. A void this book attempts to fill. The book does not aim at providing a comprehensive coverage of econometric methods. The 20 chapters in this book represent only a sample of the important topics in modern econometrics with special focus on econometrics of cross section and panel data while also recognizing that it is not possible to accommodate all types of models and methods even in these two categories. The book is unique as authors have also provided the theoretical background if any and brief literature review behind the empirical applications. It is a must have resource for students and practitioners of modern econometrics.
