International Economics G. Gandolfo, 2013-06-29 There is no lack of good international economics textbooks ranging from the elementary to the advanced so that an additional drop in this ocean calls for an explanation In the present writer's opinion there seems still to be room for a textbook which can be used in both undergraduate and graduate courses and which contains a wide range of topics including those usually omitted from other textbooks These are the intentions behind the present book which is an outcrop from undergraduate and graduate courses in international economics that the author has been holding at the University of Rome since 1974 and from his on going research work in this field Accordingly the work is organized as two books in one by distributing the material between text and appendices The treatment in the body of this book is directed to undergraduate students and is mainly confined to graphic analysis and to some elementary algebra but it is assumed that the reader will have a good knowledge of basic microeconomics and macroeconomics so that the usual review material on production functions indifference curves standard Keynesian model etc etc has been omitted Each chapter is followed by an appendix in which the treatment is mainly mathematical and where i the topics explained in the text are treated at a level suitable for advanced undergraduate or first year graduate students and ii generalizations and or topics not treated in the text including some of those at the frontiers of research are formally examined

Competition Market Study of Ukraine's Electricity Sector OECD, 2023-06-30 This market

study analyses Ukraine's electricity sector from a competition perspective. It provides a detailed description and assessment of the regulatory framework within which the Ukrainian electricity markets operate as well as an analysis of the obstacles to competition in the wholesale and retail markets.

International Economics Giancarlo Gandolfo, 2013-03-09 There is no lack of good international economics textbooks ranging from the elementary to the advanced so that an additional drop in this ocean calls for an explanation. In the present writer's opinion there seems still to be room for a textbook which can be used in both undergraduate and graduate courses and which contains a wide range of topics including those usually omitted from other textbooks. These are the intentions behind the present book which is an outcrop from undergraduate and graduate courses in international economics that the author has been holding at the University of Rome since 1974 and from his ongoing research work in this field. Accordingly the work is organized as two books in one by distributing the material between text and appendices. The treatment in the body of this book is directed to undergraduate students and is mainly confined to graphic analysis and to some elementary algebra but it is assumed that the reader will have a good knowledge of basic microeconomics and macroeconomics so that the usual review material on production functions, indifference curves, standard Keynesian model etc etc has been omitted. Each chapter is followed by an appendix in which the treatment is mainly mathematical and where i) the topics explained in the text are treated at a level suitable for advanced undergraduate or first year graduate students and ii) generalizations and/or topics not treated in the text including some of those at the frontiers of research are formally examined.

International economics I. Giancarlo Gandolfo, 1994-08-31 Alongside the traditional topics of international trade theory this useful textbook integrates many topics usually omitted and contains results of new research. It may be used at both undergraduate and graduate level thanks to its unique two-tier structure: the text speaks directly to the undergraduate in extremely clear terms while the appendices which form the second tier are addressed to graduate students and researchers. Each appendix is a self-contained treatment in mathematical terms of the topics examined in the text. The ample and balanced treatment of the various approaches and the clarity of exposition ensure that readers gain a thorough grasp of theories, facts and policies.

Mathematical Economics Vasily E. Tarasov, 2020-06-03 This book is devoted to the application of fractional calculus in economics to describe processes with memory and non-locality. Fractional calculus is a branch of mathematics that studies the properties of differential and integral operators that are characterized by real or complex orders. Fractional calculus methods are powerful tools for describing the processes and systems with memory and nonlocality. Recently fractional integro-differential equations have been used to describe a wide class of economical processes with power law memory and spatial nonlocality. Generalizations of basic economic concepts and notions: the economic processes with memory were proposed. New mathematical models with continuous time are proposed to describe economic dynamics with long memory. This book is a collection of articles reflecting the latest mathematical and conceptual developments in mathematical economics with memory and non-locality based on applications of fractional

The Economics and Science of Measurement Albert N. Link, 2021-07-08 Metrology is the study of measurement science. Although classical economists have emphasized the importance of measurement per se, the majority of economics based writings on the topic have taken the form of government reports related to the activities of specific national metrology laboratories. This book is the first systematic study of measurement activity at a national metrology laboratory and the laboratory studied is the U.S. National Institute of Standards and Technology (NIST) within the U.S. Department of Commerce. The primary objective of the book is to emphasize for academic and policy audiences the economic importance of measurement not only as an area of study but also as a tool for sustaining technological advancement as an element of economic growth. Toward this goal, the book offers an overview of the economic benefits and consequences of measurement standards, an argument for public sector support of measurement standards, a historical perspective of the measurement activities at NIST, an empirical analysis of one particular measurement activity at NIST, namely calibration testing, and a roadmap for future research on the economics of metrology.

Hubs of Illicit Trade in the Global Economy Yulia Krylova, 2024-09-30 This book meticulously examines how centers of illicit trade pose myriad threats to global security and sustainable development. The exponential growth of illicit trade, resulting in annual losses amounting to trillions of dollars for the global economy, is increasingly concentrated within specific geographic areas. These locales serve as safe havens for smugglers and their accomplices, fostering a criminal ecosystem that facilitates the convergence of various criminal activities. The book underscores the detrimental impact of poorly regulated international free trade zones which prioritize expediency over security, thereby allowing illicit trade to flourish in regions characterized by

opaque governance and lax regulatory oversight It comprehensively explores the spectrum of illicit trade present in notorious hubs such as the Argentina Brazil Paraguay Tri Border Area Dubai Panama Belize Guatemala and Ukraine Emphasizing the phenomenon of crime convergence associated with these hubs the book offers actionable recommendations for disrupting their interconnected illicit supply chains infrastructures and networks By addressing this interconnectedness the book fills a critical void in understanding how vulnerabilities within the global economy fuel the creation of illicit trade hubs It will be of great value to researchers in the fields of trade economics criminology and international development It will also be an excellent resource for government agencies policymakers and private sector managers in those industries most affected by the growing problem of illicit trade
