U.S.I.S. Video Library Catalog United States Information Agency, **Monthly Catalogue, United States Public Documents** ,1993 **Monthly Catalog of United States Government Publications** ,1977 Energy Abstracts for Policy Analysis ,1977 **The Economic Impact of Public Support to Agriculture** Virgil Ball, Roberto Fanfani, Luciano Gutierrez, 2010-07-27 Despite a gradual and sustained decline in the contribution of agriculture to the economies of the member countries of the Organization for Economic Cooperation and Development OECD the sector remains socially and politically important Although agriculture accounts for less than 2% of the gross domestic product of the OECD countries it occupies over 35% of their total land area

Predominantly rural regions where agriculture remains particularly important contain almost one quarter of the population of OECD countries. The past quarter century has witnessed significant changes in agricultural policies in OECD countries. Although total support remains high, a shift has taken place from price-linked measures to direct income support, most notably in the European Union. Policies have been adapted to meet pressing social concerns such as ensuring food security and improving environmental quality. OECD countries face major economic issues due to the ageing of their populations and the need to adapt to globalization and increasing competition from emerging economies. Continued pressure to reform agricultural policies will be exerted by the need to economize on the use of scarce public resources. At the same time, agriculture faces new challenges generated by climate change, the greening of the economy, increasing scarcity of energy and water, and the demands placed on the food system by an expanding world population. **Marine Resource Economics**, 1984

Computable, Constructive & Behavioural Economic Dynamics Stefano Zambelli, 2010-02-25. The book contains thirty original articles dealing with important aspects of theoretical as well as applied economic theory. While the principal focus is on the computational and algorithmic nature of economic dynamics, individual as well as collective decision process and rational behavior, some contributions emphasize also the importance of classical recursion theory and constructive mathematics for dynamical systems, business cycles theories, growth theories, and others are in the area of history of thought, methodology, and behavioural economics. The contributors range from Nobel Laureates to the promising new generation of innovative thinkers. This volume is also a Festschrift in honour of Professor Kumaraswamy Vela Velupillai, the founder of Computable Economics, a growing field of research where important results stemming from classical recursion theory and constructive mathematics are applied to economic theory. The aim and hope is to provide new tools for economic modelling. This book will be of particular appeal to postgraduate students and scholars in one or more of the following fields: computable economics, business cycles, macroeconomics, growth theories, methodology, behavioural economics, financial economics, experimental and agent-based economics. It might be also of importance to those interested on the general theme of algorithmic foundations for social sciences. **Energy Use and the U.S. Economy** United States. Congress. Office of Technology Assessment, 1990

The United States Catalog Ida M. Lynn, 1928 **Structural Engineering and Geomechanics - Volume 1** Sashi K. Kunnath, 2020-06-22. An understanding of dynamic effects on structures is critical to minimize losses from earthquakes and other hazards. These three books provide an overview of essential topics in structural and geotechnical engineering with an additional focus on related topics in earthquake engineering to enable readers gain such an understanding. One of the ultimate objectives of these books is to provide readers with insights into seismic analysis and design. However, in order to accomplish that objective, background material on structural and geotechnical engineering is necessary. Hence, the first two sections of the book provide this background material followed by selected topics in earthquake engineering. The material is organized into three major parts. The first section covers topics in structural

engineering Beginning with fundamental mechanics of materials the book includes chapters on linear and nonlinear analysis as well as topics on modeling of structures from different perspectives In addition to traditional design of structural systems introductions to important concepts in structural reliability and structural stability are discussed Also covered are subjects of recent interest viz blast and impact effects on structures as well as the use of fiber reinforced polymer composites in structural applications Given the growing interest in urban renewal an interesting chapter on restoration of historic cities is also included The second part of the book covers topics in geotechnical engineering covering both shallow and deep foundations and issues and procedures for geotechnical modeling The final part of the book focuses on earthquake engineering with emphasis on both structures and foundations Here again the material covered includes both traditional seismic design and innovative seismic protection And more importantly concepts in modeling for seismic analysis are highlighted
