➤ **Two dummy variables are included in each VAR:** *dumf97* and *dumm97*. The first dummy picks up the rapid nominal depreciation at the start of 1997 following the ending of foreign currency rationing. The second dummy is required for the inflationary effect of heavy capital inflows following the resumption of the stabilization program at the start of 1997.

Econometric Estimation:

The Refinement of Econometric Estimation and Test Procedures Garry D. A. Phillips, Elias Tzavalis, 2007-02-01 The small sample properties of estimators and tests are frequently too complex to be useful or are unknown Much econometric theory is therefore developed for very large or asymptotic samples where it is assumed that the behaviour of estimators and tests will adequately represent their properties in small samples Refined asymptotic methods adopt an intermediate position by providing improved approximations to small sample behaviour using asymptotic expansions Dedicated to the memory of Michael Magdalinos whose work is a major contribution to this area this book contains chapters directly concerned with refined asymptotic methods In addition there are chapters focusing on new asymptotic results the exploration through simulation of the small sample behaviour of estimators and tests in panel data models and improvements in methodology With contributions from leading econometricians this collection will be essential reading for researchers and graduate students concerned with the use of asymptotic methods in econometric analysis

Econometric Modelling with Time Series Vance Martin, Stan Hurn, David Harris, 2012-12-28 This book provides a general framework for specifying estimating and testing time series econometric models Special emphasis is given to estimation by maximum likelihood but other methods are also discussed including quasi maximum likelihood estimation generalised method of moments estimation nonparametric estimation and estimation by simulation An important advantage of adopting the principle of maximum likelihood as the unifying framework for the book is that many of the estimators and test statistics proposed in econometrics can be derived within a likelihood framework thereby providing a coherent vehicle for understanding their properties and interrelationships In contrast to many existing econometric textbooks which deal mainly with the theoretical properties of estimators and test statistics through a theorem proof presentation this book squarely addresses implementation to provide direct conduits between the theory and applied work

Econometric Estimation J. C. R. Rowley, 1973

Estimation of Dynamic Econometric Models with Errors in Variables Jaime Terceiro Lomba, 2012-12-06 A new procedure for the maximum likelihood estimation of dynamic econometric models with errors in both endogenous and exogenous variables is presented in this monograph A complete analytical development of the expressions used in problems of estimation and verification of models in state space form is presented The results are useful in relation not only to the problem of errors in variables but also to any other possible econometric application of state space formulations

Specification, Estimation, and Analysis of Macroeconometric Models Ray C. Fair, 1984 This book gives a practical applications oriented account of the latest techniques for estimating and analyzing large nonlinear macroeconomic models Ray Fair demonstrates the application of these techniques in a detailed presentation of several actual models including his United States model his multicountry model Sargent's classical macroeconomic model autoregressive and vector autoregressive models and a small twelve equation linear structural model He devotes a good deal of attention to the difficult and often neglected problem of moving

from theoretical to econometric models In addition he provides an extensive discussion of optimal control techniques and methods for estimating and analyzing rational expectations models A computer program that handles all the techniques in the book is available from the author making it possible to use the techniques with little additional programming The book presents the logic of this program A smaller program for personal microcomputers for analysis of Fair s United States model is available from Urban Systems Research Engineering Inc Anyone wanting to learn how to use large macroeconomic models including researchers graduate students economic forecasters and people in business and government both in the United States and abroad will find this an essential guidebook *Econometric Estimation* J. available from the internet these empirical illustrations are taken from finance e g CAPM and derivatives international economics e g exchange rates innovation economics e g patenting business cycle analysis monetary economics housing economics labor and educational economics e g demand for teachers according to gender and many others Exercises are added to the chapters with a focus on the interpretation of results several of these exercises involve the use of actual data that are typical for current empirical work and that are made available on the internet What is also distinguishable in Modern Linear and Nonlinear Econometrics is that every major topic has a number of examples exercises or case studies By this learning by doing method the intention is to prepare the reader to be able to design develop and successfully finish his or her own research and or solve real world problems

Econometric Analysis of Cross Section and Panel Data, second edition Jeffrey M. Wooldridge, 2010-10-01 The second edition of a comprehensive state of the art graduate level text on microeconomic methods substantially revised and updated The second edition of this acclaimed graduate text provides a unified treatment of two methods used in contemporary econometric research cross section and data panel methods By focusing on assumptions that can be given behavioral content the book maintains an appropriate level of rigor while emphasizing intuitive thinking The analysis covers both linear and nonlinear models including models with dynamics and or individual heterogeneity In addition to general estimation frameworks particular methods of moments and maximum likelihood specific linear and nonlinear methods are covered in detail including probit and logit models and their multivariate Tobit models models for count data censored and missing data schemes causal or treatment effects and duration analysis Econometric Analysis of Cross Section and Panel Data was the first graduate econometrics text to focus on microeconomic data structures allowing assumptions to be separated into population and sampling assumptions This second edition has been substantially updated and revised Improvements include a broader class of models for missing data problems more detailed treatment of cluster problems an important topic for empirical researchers expanded discussion of generalized instrumental variables GIV estimation new coverage based on the author s own recent research of inverse probability weighting a more complete framework for estimating treatment effects with panel data and a firmly established link between econometric approaches to nonlinear panel data and the generalized estimating equation literature popular in statistics and other fields New attention is given to explaining when particular econometric methods can be applied the goal is not only to tell readers what does work but why certain obvious procedures do not The numerous included exercises both theoretical and computer based allow the reader to extend methods covered in the text and discover new insights

Econometric Estimation with Dependent Observations Ian Domowitz, 1982

The Econometrics of Panel Data László Mátyás, Patrick Sevestre, 2013-12-01 The aim of this volume is to provide a general overview of the econometrics of panel data both from a theoretical and from an applied viewpoint Since the pioneering papers by Edwin Kuh 1959 Yair Mundlak 1961 Irving Hoch 1962 and Pietro Balestra and Marc Nerlove 1966 the pooling of cross sections and time series data has become an increasingly popular way of quantifying economic relationships Each series provides information lacking in the other so a combination of both leads to more accurate and reliable results than

would be achievable by one type of series alone Over the last 30 years much work has been done investigation of the properties of the applied estimators and test statistics analysis of dynamic models and the effects of eventual measurement errors etc These are just some of the problems addressed by this work In addition some specific difficulties associated with the use of panel data such as attrition heterogeneity selectivity bias pseudo panels etc have also been explored The first objective of this book which takes up Parts I and II is to give as complete and up to date a presentation of these theoretical developments as possible Part I is concerned with classical linear models and their extensions Part II deals with nonlinear models and related issues logit and probit models latent variable models duration and count data models incomplete panels and selectivity bias point processes and simulation techniques
