Models: Methods, Theory And Applications Dipak R Basu, 2009-04-17 Model Building is the most fruitful area of economics designed to solve real world problems using all available methods such as mathematical computational and analytical without distinction Wherever necessary we should not be reluctant to develop new techniques whether mathematical or computational That is the philosophy of this volume The volume is divided into three distinct parts Methods Theory and Applications The Methods section is in turn subdivided into Mathematical Programming and Econometrics and Adaptive Control System which are widely used in econometric analysis The impacts of fiscal policy in a regime with independent monetary authority and dynamic models of environmental taxation are considered In the section on Modelling Business Organization a model of a Japanese organization is presented Furthermore a model suitable for an efficient budget management of a health service unit by applying goal programming method is analyzed taking into account various socio economic factors This is followed by a section on Modelling National Economies in which macroeconomic models for the

Models Techniques and Applications Michael David Intriligator, 1978 **Handbook of Econometrics** Zvi

Griliches, Michael D. Intriligator, 1983 The Handbook is a definitive reference source and teaching aid for econometricians It examines models estimation theory data analysis and field applications in econometrics Comprehensive surveys written by experts discuss recent developments at a level suitable for professional use by economists econometricians statisticians and in advanced graduate econometrics courses *Econometric Model Selection* Antonio Aznar Grasa, 2013-03-09 This book

proposes a new methodology for the selection of one model from among a set of alternative econometric models Let us recall that a model is an abstract representation of reality which brings out what is relevant to a particular economic issue An econometric model is also an analytical characterization of the joint probability distribution of some random variables of interest which yields some information on how the actual economy works This information will be useful only if it is accurate and precise that is the information must be far from ambiguous and close to what we observe in the real world Thus model selection should be performed on the basis of statistics which summarize the degree of accuracy and precision of each model A model is accurate if it predicts right it is precise if it produces tight confidence intervals A first general approach to model selection includes those procedures based on both characteristics precision and accuracy A particularly interesting example of this approach is that of Hildebrand Laing and Rosenthal 1980 See also Hendry and Richard 1982 A second general approach includes those procedures that use only one of the two dimensions to discriminate among models In general most of the tests we are going to examine correspond to this category **A Practical Introduction to Econometric Methods**

Patrick K. Watson, Sonja S. Teelucksingh, 2002 The text is aimed at final year undergraduate students or those at the graduate level doing econometrics for the first time It is an introductory course in the theory and practice of classical and modern econometric methods A proper study of the material will allow the reader to Understand the scope and limitations of classical and modern econometric techniques Read write and properly interpret articles and reports of an applied econometric nature Build upon the elements of econometric theory and practice introduced in the book Although some basic knowledge of matrix algebra and elementary statistical theory will be assumed much of it is covered in the body of the text All the main theoretical concepts are illustrated with the use of econometric software mainly EViews

Estimation, and Analysis of Macroeconometric Models Ray C. Fair, 1984 This book gives a practical applications oriented account of the latest techniques for estimating and analyzing large nonlinear macroeconomic models Ray Fair demonstrates the application of these techniques in a detailed presentation of several actual models including his United States model his multicountry model Sargent's classical macroeconomic model autoregressive and vector autoregressive models and a small twelve equation linear structural model He devotes a good deal of attention to the difficult and often neglected problem of moving from theoretical to econometric models In addition he provides an extensive discussion of

optimal control techniques and methods for estimating and analyzing rational expectations models A computer program that handles all the techniques in the book is available from the author making it possible to use the techniques with little additional programming The book presents the logic of this program A smaller program for personal microcomputers for analysis of Fair's United States model is available from Urban Systems Research Engineering Inc Anyone wanting to learn how to use large macroeconomic models including researchers graduate students economic forecasters and people in business and government both in the United States and abroad will find this an essential guidebook
