Policy Kent Matthews, Philip M. Booth, 2006-02-22 Since the Bank of England was made independent in 1997 the conduct of monetary policy has been relatively uncontroversial. The debates between Keynesians, monetarists and supporters of fixed exchange rate mechanisms now appear very distant. Despite the apparent consensus there are many issues related to the conduct of monetary policy that are not yet settled and which will soon come to the fore. Is the current form of independence for the Bank of England appropriate? Should a central bank target inflation or the price level? How does a central bank deal with asset price deflation? Should more account be taken of monetary aggregates? Should central banks target asset prices? What is the relationship between the money supply and asset price inflation? How should central banks ensure financial stability? The IEA was at the forefront of changing the parameters of the debate surrounding monetary policy in the 1970s and 1980s. This text brings together some of the leading authors in the field including the current Governor of the Bank of England to discuss current issues in monetary policy and the relationship between monetary policy and financial markets. It is appropriate for undergraduates and postgraduates in economics and finance as well as for practitioners in financial markets.

It highlights the need to develop macrofinancial models which allow analysis of the macroeconomic effects of macroprudential policy tools and to evaluate elements of the Basel III reforms as a priority. The paper also reviews the main approaches to introducing financial frictions into general equilibrium models. Donald W. K. Andrews, James H. Stock, 2005-07-04 This 2005 volume contains the papers presented in honor of the lifelong achievements of Thomas J. Rothenberg on the occasion of his retirement. The authors of the chapters include many of the leading econometricians of our day and the chapters address topics of current research significance in econometric theory. The chapters cover four themes: identification and efficient estimation in econometrics; asymptotic approximations to the distributions of econometric estimators and tests; inference involving potentially nonstationary time series such as processes that might have a unit autoregressive root; and nonparametric and semiparametric inference. Several of the chapters provide overviews and treatments of basic conceptual issues while others advance our understanding of the properties of existing

econometric procedures and or propose others Specific topics include identification in nonlinear models inference with weak instruments tests for nonstationary in time series and panel data generalized empirical likelihood estimation and the bootstrap
