Economic Policy And Sustainable Land Use Economic Advances In Quantitative Analysis For Developing Countries:

Economic Policy and Sustainable Land Use Nico Heerink, Herman van Keulen, Marijke Kuiper, 2012-12-06 Since the 1980s many developing countries have implemented macro economic policy reforms to curb inflation reduce fiscal deficits and control foreign debt The policy instruments used such as exchange rate adjustment budget cuts trade policy reforms public expenditure reviews and privatisation have different and sometimes opposite consequences for agricultural land use During the same period awareness was growing that deteriorating soil quality could become a limiting factor to increase or even sustain agricultural production As a result food availability and even accessibility for large population groups in developing countries may be jeopardised in the near future Recently quantitative models have made useful contributions to understanding the impact of economic policy reforms on the sustainability of land use They provide a consistent analytical framework to deal with complex issues such as the direct and indirect effects of economic agricultural environmental and population policies the role of market imperfections in transmitting economic policy signals and the interactions between soil quality agricultural production and household economic decision making Different types of models can be distinguished bio economic models focussing on the link between farm household decisions and the agricultural resource base household and village models examining the impact of the socio economic environment on farm household decisions and more aggregate models analysing interactions between sectors and their implications for sustainable land use

Economic Policy and Sustainable Land Use Nico Heerink, H. van Keulen, Marijke Kuiper, 2001 This book provides an overview of quantitative approaches to analyse the effects of economic policy reforms on sustainable land use in less developed countries LDCs Its purpose is to assess recent advances in modelling approaches to identify key issues in quantifying the relationships and to formulate recommendations on future research directions that may add to further improve our understanding of the potential effects of economic policy instruments on soil quality changes in LDCs Special attention is paid to modelling the responses of farm households to policy incentives

Policy Analysis for Sustainable Land Management and Food Security in Ethiopia Stein Terje Holden, Shiferaw Bekele, Bekele Ambaye Shiferaw, J. Pender, 2005-01-01 Policymakers and technology development institutions have mostly focused on high potential farming areas which have better resource endowments and greater access to markets and infrastructure than less favored areas However in developing nations more than one billion people live in less favored areas where despite disadvantages appropriate policies and programs can generate high returns and contribute significantly to poverty reduction IFPRI and its partners research in the highlands of Ethiopia shows how poverty and land degradation can be reduced in a less favored area Using a bioeconomic model to analyze the effects that land degradation population growth stagnant technology market imperfections and increased risk of drought have on household production welfare and food security the report gauges how alternative policy choices affect poverty and land

degradation According to the study land quality and household welfare are both in peril in the Ethiopian highlands The population in the region could suffer devastating effects if proper policies are not put in place The bioeconomic modeling approach used in this study can be usefully adapted and applied in many other settings and at larger spatial and socioeconomic scales

Global Environmental Change and Land Use Han Haarman,A. Verhagen,C.A.

Rovers,2013-03-14 The interaction between environmental change and human activities is complex requiring the concepts and tools of a number of disciplines for its effective analysis Land use and land cover change has only recently become a topic susceptible to scientific research as these concepts and tools have been developed and made available Rooted in a broad community concerned with global change systematic research has begun into land use systems at different scales and interactions and their links with global cycles of water nitrogen and carbon are being explored Partly based on research initiated by the Dutch National Research Programme on Global Air Pollution and Climate Change NRP this book touches upon various land use and land cover issues in relation to global environmental change In addition to the biogeochemical cycles land as a carrier for functions of economic activities food and fibre production and energy production via biomass are discussed Crucial in studying land use is human behaviour and man environment interaction at different scales Land use and land cover change is an important contributor of greenhouse gases as these activities directly interfere with the carbon nitrogen and water cycles These cycles are connected through numerous feedback loops The interface of land use and climate is essentially determined by the interaction of man and the environment Man uses land primarily to produce food a relatively small area is needed for urban development

Harnessing and Guiding Social Capital for Rural

Development S. Khan,S. Kazmi,Z. Rifaqat,2007-11-26 This book is about the harnessing of social capital formalized as village or community organizations to guide and facilitate collective action for attaining poverty alleviation in particular and enhancing community well being in general

Developmental Dilemmas Peter Ho,2005-05-24 Developmental Dilemmas

singles out land as an object of study and places it in the context of one of the world's largest and most populous countries undergoing institutional reform the People's Republic of China The book demonstrates that private property protected by law the principle of getting the prices right and the emergence of effectively functioning markets are the outcome of a given society's historical development and institutional fabric Peter Ho argues that the successful creation of new institutions hinges in part on choice and timing in relation to the particular constellation of societal economic political and cultural parameters Disregarding these could result in rising inequality bad land stewardship and the eruption of land related grievances

Making World Development Work

Grégoire Leclerc,Charles A. S. Hall,2007-06-16 The authors reexamine world development usually the province of economists as professionals trained in the natural sciences They show how we have and might use tested scientific and technical procedures and concepts as well as science itself to achieve much better results than what has been characteristic of the past Leclerc and Hall contend that to scholars with a scientific background

the process of development and the economic logic behind it often look almost surrealistic The basic question at the foundation of this review is this Why should something so important as world development something capable of absorbing such vast sums of money and of human goodwill something that impacts the people and the environment so much continue to be organized and planned using economic techniques and theories that are both unconfirmed experimentally and proven to have led to development failures

BOOK JACKET Strategies for Sustainable Land Management in the East African Highlands J. Pender, Dr. Frank Place, Simeon Ehui, 2006 Deforestation overgrazing and unsustainable methods of cultivation are threatening agriculture and food security in the highlands of East Africa In response economists and other development professionals have turned their attention to combating the problem

A Comprehensive Assessment of the Role of Risk in U.S. Agriculture Richard E. Just, Rulon D. Pope, 2013-11-11 After all the research on agricultural risk to date the treatment of risk in agricultural research is far from harmonious Many competing risk models have been proposed Some new methodologies are largely untested Some of the leading empirical methodologies in agricultural economic research are poorly suited for problems with aggregate data where risk averse behavior is less likely to be important This book is intended to i define the current state of the literature on agricultural risk research ii provide a critical evaluation of economic risk research on agriculture to date and iii set a research agenda that will meet future needs and prospects This type of research promises to become of increasing importance because agricultural policy in the United States and elsewhere has decidedly shifted from explicit income support objectives to risk related motivations of helping farmers deal with risk Beginning with the 1996 Farm Bill the primary set of policy instruments from U S agriculture has shifted from target prices and set aside acreage to agricultural crop insurance Because this book is intended to have specific implications for U S agricultural policy it has a decidedly domestic scope but clearly many of the issues have application abroad For each of the papers and topics included in this volume individuals have been selected to give the strongest and broadest possible treatment of each facet of the problem The result is this comprehensive reference book on the economics of agricultural risk

Regional Climate Change and Variability Ruth, M. Donaghy, K. Kirshen, P., 2006 a welcome addition to both the climate change and regional science literature a resource for researchers in the field who are working to bridge the gap between climate research and the needs of local and regional decision makers who will design adaptive strategies in response to climate change having some of the best regional climate impacts work in one place is reason enough to have this book on the shelf James Neumann Journal of Regional Science

Social Capital and Collective Action in Pakistani Rural Development Shaheen Rafi Khan, Shahrukh Rafi Khan, 2021-05-14 This book distinguishes conceptually between indigenous and constructed social

capital and the associated spontaneous and induced collective action for rural development and natural resource preservation While some of the case studies in this book show that induced collective action can lead to cost effective community centric and empirically grounded rural development initiatives other case studies show that spontaneous collective action based on indigenous social capital can result in resource preservation positive development outcomes and resistance to the excesses engendered by conventional development The authors also explore a hybrid form whereby spontaneous collective action is given a more effective and sustainable shape by an outside organization with experience of induced collective action Exploring alternative community centric paths to development especially those attuned with sustainability imperatives is part of a global search for solutions While the volume draws on the Pakistani case the problem with conventional development approaches and the need for complementary alternatives is not unique to only this country and the volume has broader relevance to students and researchers across the fields of social policy and development

Public and Private in Natural Resource Governance Thomas Sikor, 2013-05-13 This volume develops the rich conceptual and empirical content of public private relationships increasingly acknowledged as the dominant realm of natural resource governance Ten wonderful studies from around the world illuminate opportunities for advancing the theory analysis and effective formation of sustainable systems of resource use The book is excellent for courses in governance and public policy in any resource and environmental field JEFF ROMM PROFESSOR FOR RESOURCE POLICY UNIVERSITY OF CALIFORNIA AT BERKELEY US The book addresses the theoretically and politically most important division of social organization into public and private The authors bring an exciting multidisciplinary perspective to bear on changing and multiple publics and the strength of relationships connecting these two spheres in rural development and natural resource governance The contributions range from consumer health and food safety soil science forestry and water management to sociological and economic aspects of natural resource property and governance FRANZ VON BENDA BECKMANN MAX PLANCK INSTITUTE FOR SOCIAL ANTHROPOLOGY GERMANY Natural resources have historically been

considered as being governed in public or private spheres that is by the state on behalf of the people or by companies or individuals driven by the market This dichotomy between private and public is now recognized as overly simplistic and it is clear that publics and privates operate at a range of levels and with differing degrees of separation or overlap Bringing together a group of internationally respected researchers this book provides a new perspective on prominent issues in resource governance including the state NGOs civil society communities participation devolution privatization and hybrid institutions highlighting the three dimensional nature of relations between public and private It builds on empirical analyses from six fields of natural resource governance agri environment biodiversity bioenergy food quality and safety forestry and rural water and employs a comparative approach that goes beyond the specificities of individual policy fields recognizing shared elements and allowing for a greater understanding of the dynamics underlying governance processes Introductions to the volume and to each section summarize the key debates and highlight linkages between chapters This is essential reading for academics students and policy experts in natural resource governance development and environmental policy

Handbook of Transdisciplinary Research Gertrude Hirsch Hadorn,Holger Hoffmann-Riem,Susette Biber-Klemm,Walter Grossenbacher-Mansuy,Dominique Joye,Christian Pohl,Urs Wiesmann,Elisabeth Zemp,2007-12-15 Transdisciplinary Research TR is an emerging field in the knowledge society for relating science and policy in addressing issues such as new technologies migration and public health This handbook provides a structured overview of the manifold experiences gained in these fields In the first part 21 projects from all over the world present their research approaches In the second part cross cutting challenges of TR are discussed in reference to the same projects **Ecoagriculture** ,2004 **Evaluation of Development Policies Using Integrated Bio-economic Land Use Models: Applications to Costa Rica** , **Redefining Diversity and Dynamics of Natural Resources Management in Asia, Volume 1** Ganesh Shivakoti,Ujjwal Pradhan,Helmi Helmi,2016-09-01 Redefining Diversity and Dynamics of Natural Resources Management in Asia Volumes 1 4 brings together scientific research and policy issues across various topographical area in Asia to provide a comprehensive overview of the issues facing the region Sustainable Natural Resources Management in Dynamic Southeast Asia Volume 1 pulls together regional experts in the field to look specifically at sustainability issues across the region to see what has been implemented what the impacts have been and what other options are available In the race to be a developed region many Southeast Asian countries have foregone natural resources through haphazard use As a result the people are faced with numerous environmental challenges particularly deforestation and forest degradation biodiversity loss and ecosystem degradation reduction in soil quality and decreases in the quantity of available water Community based forest management is the involvement of local communities in the protection conservation and management of public forests to prevent degradation through sustainable practices while still responding to the basic social and economic needs of local populations When the people who depend on forest resources for their livelihoods are jointly responsible for managing and protecting them they

tend to do so in a more sustainable manner by focusing on the long term benefits rather than the immediate short term gains However when tenure rights are weak unclear or insecure or offer limited benefits people are incited in extracting more immediate benefits resulting in suboptimal forest management and the reduction of carbon stocks Features case studies that cover issues such as rising levels of deforestation forest degradation regional food security ecosystem degradation biodiversity loss conflicts over natural resource use water management issues and impacts on local communities Includes contributions from local researchers who are dealing with these issues first hand and on a daily basis Includes a comparative review on REDD implementation in different communities Focuses on sustainability issues across the region *Institutions, Technology, and Water Control* Vishal Narain, 2003 Few studies of resource management have paid as much attention or intelligently surveyed the operational aspects of Water Users Associations WUAs as *Institution Technology and Water Control* Relying on ethnographic research methods Narain takes an interdisciplinary approach to examine how institutions are shaped by technology Calling attention to the internal organisational dynamics of the WUAs the author argues that the emergence of institutions for collective action is shaped by technology and social relationships
