Eicher,2019-07-12

This volume examines the macrodynamic behaviour of advanced economies with social institutions similar to those of the United States and other members of the Organization of Economic Cooperation and Development It is a critique of and provides alternative models to conventional neoclassical theory The principles developed are used to explain two major phenomena in economic life the nation s secular growth rate and the cyclical deviations around that growth These interdependent movements of trend and cycle constitute the economy s macrodynamic behaviour Eichner uses a systems framework for integrating four distinct institutional dimensions in society the normative the political the economic and the anthropogenic This book by one of the leading proponents of Post Keynesian economics is the culmination of over 13 years of scholarly work The author s untimely death in February 1988 prevented the final revisions of his manuscript The book should prove an essential addition to the library of scholars and students of economics both within and outside the Post Keynesian tradition **The Economic System** John M. Kuhlman,Gordon S. Skinner,1964 **Economics Beyond the Millennium**

Alan P. Kirman,Louis-André Gérard-Varet,1999-09-09 *Economics Beyond the Millennium* contains articles by leading authorities in various fields of economic theory and econometrics each of whom gives an account of the current state of the art in their own field and indicate the direction that they think it will take in the next ten years The fields covered are grouped into three categories the microfoundations of macroeconomics where Malinvaud evaluates the theory of resource allocation and Hildenbrand examines the empirical content of economic theories markets and organizations where both Gabszewicz and D Aspremont et al look at imperfect competition and general equilibrium Scotchmer and Thies consider spatial economics Ponssard the future of managerial economics while Van Damme looks at the next stage of game theory and econometrics where Gouriéroux reviews econometric modelling in general Maravall looks at time series Lubrand and

Bauwens examine Bayesian analysis and Blundell looks at the rapidly expanding area of microeconometrics *Information Sources* John T. Fletcher, 2014-05-20 *Information Sources in Economics* Second Edition aims to bring together all sources of information in the field of economics into one convenient form as well as present a picture of the international scene in the disciplines covered in the book The text discusses the different sources of information such as the different kinds of libraries bibliographic tools such as encyclopedias dictionaries directories and almanacs periodicals unpublished material and statistics sources The book also related branches of economics such as macroeconomics industrial and agricultural economics as well as their related literature The monograph is recommended for students and practitioners in the field of economics who are in need of sources of information on economics especially those who are engaged in studies **The Pure Theory of International Trade** Miltiades Chacholiades, 2017-07-12 There has long been a need for a systematic introduction to the modern pure theory of international trade that would take the student through a careful introduction to the tools of analysis and the main logical propositions into the application of the theory to practical problems of international economic policy Trade theory should be part and parcel of price theory distinguished only by the fact that other countries form part of the natural opportunities and natural constraints that a country confronts in its efforts to bend nature to its desire to produce utility yielding goods and services but its exposition is often confused by the attachment of its expositors to obsolete problems and backward analytical techniques This book covers in detail classical neoclassical and modern theories of international trade with special attention to problems of equilibrium growth and welfare and discusses the work of all major contributors in this field from Ricardo and Mill through Meade Heckscher and Ohlin to the growth models of Johnson Solow and Uzawa All problems are clearly stated and the easiest and most convenient solutions are sought in each case with the more technical topics in the field discussed in several chapters and appendixes that may be omitted for less advanced students without interrupting the continuity of the book The book's coverage is complete and entirely up to date It is written primarily for advanced undergraduate and graduate courses in international trade but it will also serve as an important reference tool for professional economists working in this field and will be of considerable interest to students and practitioners dealing with problems of economic development and international business relationships more generally *Technical Education Program Series No. 9. Architectural and Building Construction Technology* United States.
