Clayton,2005 *Economic Theory and Cognitive Science* Don Ross,2007-01-26 In this study Don Ross explores the relationship of economics to other branches of behavioral science asking in the course of his analysis under what interpretation economics is a sound empirical science The book explores the relationships between economic theory and the theoretical foundations of related disciplines that are relevant to the day to day work of economics the cognitive and behavioral sciences It asks whether the increasingly sophisticated techniques of microeconomic analysis have revealed any deep empirical regularities whether technical improvement represents improvement in any other sense Casting Daniel Dennett and Kenneth Binmore as its intellectual heroes the book proposes a comprehensive model of economic theory that Ross argues does not supplant but recovers the core neoclassical insights and counters the caricaturish conception of neoclassicism so derided by advocates of behavioral or evolutionary economics Because he approaches his topic from the viewpoint of the philosophy of science Ross devotes one chapter to the philosophical theory and terminology on which his argument depends and another to related philosophical issues Two chapters provide the theoretical background in economics one covering developments in neoclassical microeconomics and the other treating behavioral and experimental economics and evolutionary game theory The three chapters at the heart of the argument then apply theses from the philosophy of

Creating Economics in the Lab Andrej Svorenčik, 2018 Economics laboratories have become the primary locations of experimental economics research by the 1990s They were a result of a decade long development from ad hoc opportune places to dedicated purpose designed spaces The distinctive feature of the economics laboratory and its key instrument became networked computers running custom built software However the history of the economics laboratory is not just a history of evolving technology I argue in this article that it is mainly a history of learning how to build an experimental economics community Only a functioning community was able to change a physical place to a laboratory space The distinction between place and space originates in the work of Michael de Certeau and I use it to analyze the evolution of economics laboratories To this end I analyze the case of Austin Hoggatt's Management Science Laboratory at Berkeley in the 1960s as it illustrates the indispensability of creating a community centered on the laboratory In contrast the laboratories in Arizona and at Caltech since the 1980s and in Amsterdam since the 1990s have become successful spaces because unlike Hoggatt they focused equally on community building as on infrastructure and technology This gave rise to social infrastructure and division of labor in the laboratory space **Methods in Experimental Economics** Joachim

Scholars' Guide to Humanities and Social Sciences in the Soviet Union and the Baltic States Tigran Martirosyan, Silvia Maretti, S. Frederick Starr, 2019-11-21 In the years since the first edition of the Guide was published the research institutions of the academies of sciences of the USSR and the republics have undergone several sometimes radical reorganizations and reaffiliations This guide to academy institutions supplies names addresses and historical research and organizational profiles for each institution with summary information on staffing current projects special facilities and libraries The end of the Cold War has brought with it many changes of attitude and policy in the political arena however nowhere has change been so emotionally charged as in the area of politically based emigration Refugee policy is the driving force behind many of today's headlines influencing both foreign and domestic policy In *Desperate Crossings* authors Norman L and Naomi Flink Zucker chronicle and analyze the phenomenon of mass escape that began with the Haitians but exploded into the American consciousness in the spring of 1980 with the Mariel boatlift and the subsequent mass exodus from Central America and was most recently manifested in the Haitian and Cuban exoduses of 1994 In a compelling and carefully documented narrative they identify the troika of interests foreign policy domestic pressures and costs that have controlled and determined the American response to refugees since before the Second World War continuing until today *Desperate Crossings* concludes by proposing a comprehensive and politically palatable approach to future refugee flows both in our hemisphere and for the world community at large including Europe and Asia The authors suggest how by changing the course of its refugee policies and programs the United States can better respond to both the needs of refugees and the demands of its citizens

The Economic Analysis of Substance Use and Abuse Frank J. Chaloupka, Michael Grossman, Warren K. Bickel, Henry Saffer, 2009-02-15 Conventional wisdom once held that the demand for addictive substances like cigarettes alcohol and drugs was unlike that for any other economic good and therefore unresponsive to traditional market forces Recently however researchers from two disparate fields economics and behavioral psychology have found that increases in the overall price of an addictive substance can significantly reduce both the number of users and the amounts those users consume Changes in the full price of addictive substances including monetary value time outlay effort to obtain and potential penalties for illegal use yield marked variations in behavioral outcomes and demand The *Economic Analysis of Substance Use and Abuse* brings these distinctive fields of study together and presents for the first time an integrated assessment of their data and results Unique and innovative this multidisciplinary volume will serve as an important resource in the current debates concerning alcohol and drug use and abuse and the impacts of legalizing illicit drugs

Defense Documentation Center (U.S.),1963 *Handbook of Experimental Economic Methodology* Guillaume R. Fréchette,A.
Schotter,2015 The Handbook of Experimental Economic Methodology edited by Guillaume R Fr chette and Andrew Schotter
aims to confront and debate the issues faced by the growing field of experimental economics For example as experimental
work attempts to test theory it raises questions about the proper relationship between theory and experiments As
experimental results are used to inform policy the utility of these results outside the lab is questioned and finally as
experimental economics tries to integrate ideas from other disciplines like psychology and neuroscience the question of their
proper place in the discipline of economics becomes less clear This book contains papers written by some of the most
accomplished scholars working at the intersection of experimental behavioral and theoretical economics talking about
methodology It is divided into four sections each of which features a set of papers and a set of comments on those papers The
intention of the volume is to offer a place where ideas about methodology could be discussed and even argued Some of the
papers are contentious a healthy sign of a dynamic discipline while others lay out a vision for how the authors think
experimental economics should be pursued This exciting and illuminating collection of papers brings light to a topic at the
core of experimental economics Researchers from a broad range of fields will benefit from the exploration of these important
questions **Laboratory Experiments in the Social Sciences** Murray Webster,Jane Sell,2014-07-01 While there are many
books available on statistical analysis of data from experiments there is significantly less available on the design development
and actual conduct of the experiments Laboratory Experiments in the Social Sciences summarizes how to design and conduct
scientifically sound experiments be they from surveys interviews observations or experimental methods The book
encompasses how to collect reliable data the appropriate uses of different methods and how to avoid or resolve common
problems in experimental research Case study examples illustrate how multiple methods can be used to answer the same
research questions and what kinds of outcome would result from each methodology Sound data begins with effective data
collection This book will assist students and professionals alike in sociology marketing political science anthropology
economics and psychology Provides a comprehensive summary of issues in social science experimentation from ethics to
design management and financing Offers how to explanations of the problems and challenges faced by everyone involved in
social science experiments Pays attention to both practical problems and to theoretical and philosophical arguments Defines
commonalities and distinctions within and among experimental situations across the social sciences
