

Other suggestions for improvement: In addition, please note that the current implementation of the `get` method in the `LinkedList` class is inefficient. It uses a `while` loop to traverse the list until it finds the node with the given index. This is a time complexity of $O(n)$. A more efficient approach would be to use a `HashMap` to store the nodes and their indices, which would allow for constant time access ($O(1)$). This would also simplify the `add` and `remove` methods by eliminating the need to traverse the list to find the node to be added or removed.
