Families Living with Chronic Illness and Disability Paul W. Power, Arthur E. Dell Orto, 2004-07-20 To help families manage an intense medical related event Power and Dell Orto propose that a family oriented life and living perspective should be combined with a family intervention philosophy Stressing acknowledgment of the adverse effects of the illness and an affirmation approach to family struggle and opportunities the authors explore issues relevant to treatment family adaptation quality of life and family survival A unique feature of the text includes the organization of the chapters around thought provoking personal statements followed by questions experiential tasks designed to stimulate thought and discussion This book is must reading for health and allied health professionals including physicians nurses rehabilitation counselors social workers psychologists and family advocates and will serve as a useful textbook for professionals in training Shadow of Illness Myra Bluebond-Languer, 2020-06-30 A revealing account of how families adapt to living with a chronically ill child What is it like to live with a child who has a chronic life threatening disease What impact does the illness have on well siblings in the family Myra Bluebond Languer suggests that understanding the impact of the illness lies not in identifying deficiencies in the lives of those affected but in appreciating how family members carry on with their lives in the face of the disease s intrusion The Private Worlds of Dying Children Bluebond Languer s previous book now considered a classic in the field explored the world of terminally ill children In her new book she turns her attention to the lives of those who live in the shadow of chronic illness the parents and well siblings of children who have cystic fibrosis Through a series of narrative portraits she draws us into the daily lives of nine families of children at different points in the natural history of the illness from diagnosis through the terminal phase In these portraits as family members talk about their experiences in their own words we see how parents well siblings and the ill children themselves struggle in different ways to contain the intrusion of the disease into their lives Bluebond Langner looks at how parents adjust their priorities and their idea of what constitutes a normal life how they try to balance the needs of other family members while caring for the ill child and how they see the future This context helps us understand how well siblings view the illness and how they relate to their ill sibling and parents Since the issues raised are not unique to cystic fibrosis but are common to other chronic and life threatening illnesses this book will be of interest to all who study care for or live with the seriously ill **How Do Families Cope With Chronic** Illness? Robert E. Cole, David Reiss, 2013-05-13 Because chronic disorder is becoming an ordinary feature of family life and development understanding its impact has become critical This volume and the conference proceedings it reports represents

a major effort to examine the family s response to chronic physical or psychopathological illness in one or more of its members Recent data are revising our notions of chronic illness Evidence is mounting that chronic psychiatric disorders reflect in part abnormalities of brain structure and function In this sense they are in part medical disorders On the other hand a number of traditionally labeled medical disorders produce a broad range of psychological symptoms and are exquisitely sensitive to psychosocial influences Families undergo a complex process of adaptation during which their response to stress and their fundamental beliefs about learning and parenting change These beliefs endure and are difficult to alter By examining the processes in a wide range of chronic conditions this volume helps to identify the common underlying processes of adaptation The first three chapters concern the families responses to disorders that are distinctly medical the next three focus on families responses to grey zone disorders or anomalies that appear early in life minor physical anomalies and communication handicaps and one chapter focuses exclusively on schizophrenia The last chapter reflects an effort to develop a model based on the experience of researchers with both psychiatric and medical illness

Mcdaniel, Jeri Hepworth, William J. Doherty, H. Mcdaniel, 2009-08-05. In the narrative of every human life and family illness is a prominent character Even if we have avoided serious illness ourselves we cannot escape its reach into our circle of family and friends Illness brings us closer to one another through caregiving and separates us through disability and death yet little attention has been paid to personal and family illness in psychotherapy Rather therapists tend to focus on the psychosocial realm leaving the biological realm to other physicians and nurses Susan H McDaniel Jeri Hepworth and William J Doherty invited therapists who work with individuals and families experiencing chronic illness and disability to describe clinical cases that illustrate their approach to medical family therapy Contributors then were asked to share a personal story about their experiences with illness and to explain how those experiences affect the way they work with their clients Vivid case studies dealing with a range of illnesses including cancer infertility schizophrenia AIDS heart disease diabetes asthma and multiple sclerosis show how the therapists own experiences of illness are relevant to their care of others and how these experiences

can be used to form a healing bond in therapy Poignant honest and illuminating The Shared Experience of Illness allows us to understand more fully the relationship between the personal and the professional
